

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

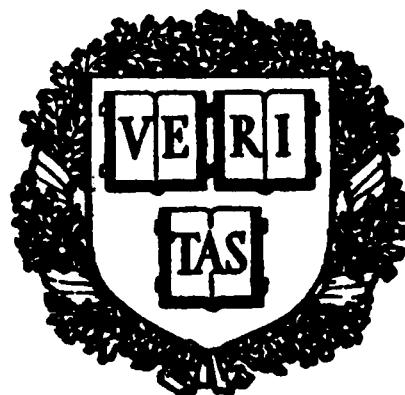

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PREFATORY NOTICE

BY

JOHN S. BLACKIE

PROFESSOR OF GREEK IN THE UNIVERSITY OF EDINBURGH.

I think it right to say a single word by way of preface to this book, not from the conceit that a work from the pen of the author of the admirable treatise on 'Romaic and Modern Greek'* requires any recommendation from me; but because, the work having been undertaken at my request and for the use of my classes in the University, it seems natural that I should state my reasons for having wished its production, and the manner in which I intend to use it.

The natural method of learning languages is by *hearing* and *speaking*, which the invention of letters and the multiplication of books have supplemented by *reading* and *writing*. The best method of acquiring a foreign language, whether dead or living, will of course

* I am glad to see that Lord Broughton, in the last edition of his *Travels in Albania &c.* (vol. 2. p. 477.), speaks of this work in the following terms of well-deserved eulogy: "Professor Blackie's lecture, amongst other benefits conferred upon the students of Greek literature, has given occasion to a treatise which appears to me to contain, on the whole, more valuable information and sound criticism on the subject in question, than any which has hitherto come under my notice. The title-page of the pamphlet is as follows: 'Romaic and Modern Greek, compared with one another, and with ancient Greek, by James Clyde M. A.'"

be that in which the greatest amount of hearing, speaking, reading, and writing can be compressed, in well graduated lessons, into a given amount of time. Some minds will profit more by one of these elements of complete indoctrination, and others by another; but the greatest progress will unquestionably be made by him who knows to avail himself of the resources of all the four.

In our schools and colleges, from causes that cannot be detailed here, the important exercise of speaking Latin and Greek has fallen into disuse, and, till that be resuscitated, the importance of the element of writing, which supplies its place, can scarcely be overrated. Writing indeed, even if the practice of speaking were in full play, could in no wise be dispensed with; for, though inferior to speaking in ease and flexibility, it is superior in accuracy and architectural massiveness. As matters now stand however, writing must be plied with double vigour; otherwise the learner will never get command of the language in a masterly way, as a fencer has command of his foil, but can only know it passively, as brutes stand in relation to sensuous impressions, which they receive and recognise, but cannot use.

How then is the writing of language to be practised? Plainly, as speaking is practised in the natural method; and, as this proceeds on the foundation of *hearing* — of which indeed it is but the reflection — so writing must be conducted by a well-calculated application of the materials presented by *reading*. Now, in the 'exercise-books' often used by teachers for inculcating the elements of Greek and Latin composition,

this very obvious principle is disregarded. The learner reads one thing in a book, and in another book writes another and an altogether different thing. The evil consequences of this are manifest. The great mass of the materials presented by the reading lies as a dead store never called into service, and the scholar, knowing that he will never again have to employ what he reads, gets into the habit of passing it over in a perfunctory way, and throwing it aside, as a lawyer does those facts of the case he is pleading today which contain no principle bearing on the case he may be pleading tomorrow; while the written exercises present a wholly new set of words, phrases, and instructions, which are either given into the learner's hands without any demand on his memory, or contain problems too difficult for solution by a tyro of the most limited experience.

The proper course to be taken, instead of this slovenly and insufficient method of 'exercise-books', is quite obvious. The teacher must himself write out exercises formed upon the model of the reading-lesson, so that whatever is read today will certainly be required tomorrow, or next day, for the performance of the written exercise. This is the way in which I have always proceeded in my junior class; and, in order to make the original impression, received from reading, be repeated as frequently as possible — in the frequency of which repetition the great trick of learning languages consists — I have insisted that the exercise, after having been made by the student, and corrected publicly by the Professor, be carefully transcribed into a book, subject to the inspection of the Professor, or the class-tutor.

In such exercises, there are obviously two things to be attended to, viz. the mere furniture of words, and their scientific disposition, or Syntax. The first presents no difficulty. That teacher must be extremely dull and stupid who cannot take the materials presented by the reading, and put them into some new shape that shall try at once the memory, and the wit of his scholars. But the management of the Syntax is more delicate. The mere words may be used as they occur, but the Syntax should be proceeded with in an orderly fashion, so that the progress may be, as much as possible, from the simple to the complex, from the obvious to the subtle. The teacher must therefore take special care not to confuse his scholars, by giving sentences implying a curious knowledge of the respective functions of the Subjunctive and Optative for example, before the formation of the simple independent sentence has been mastered; and he ought to make notes, in the margin of his book, of the points of construction which, as they occur, he helps the scholar gradually to evolve from his reading. Afterwards, to nail the whole down surely, he may compose notes, and dictate them to the students, with distinct reference to the several exercises, by which the most important principles of Syntax are gradually worked into the living consciousness of the learner.

It is manifest however that, with the greatest care, it will be difficult for the teacher to elicit a systematic whole of syntactical doctrine merely out of the materials presented by the reading, especially if, as in the meagre way of the Scotch universities, he sees the greater part of his students only for one short campaign

of five months. To remedy this defect, it seems expedient that he should have at hand a good manual of Syntax, concise, but scientific and complete, to which he may constantly refer the student, and which, in point of bulk, shall be so manageable as to be easily mastered by a diligent youth in the course of a single session.

Not finding any work of this kind that exactly suited my views, I might have been forced to put together something of the sort for my own use; but, having happily met, in Mr. Clyde, with a gentleman in whom, from his skill as a teacher, and his habit of philosophical analysis, I had the greatest confidence, I have been enabled to get the want supplied without interrupting the course of more important studies.

I have only to add that, though I read a considerable part of the manuscript, I am not entitled to the slightest degree of praise for any of the good things that this work will be found to contain. As little can I be blamed for whatsoever spots the sharp-eyed critic may discover in a body otherwise fair. Had I not known, from the most sufficient experience, that Mr. Clyde is a man able to fight his own battles against any grammarian in Christendom, I should never have asked him to do the work.

EDINBURGH 1. September, 1856.

JOHN S. BLACKIE.

AUTHOR'S PREFACE TO THE FOURTH EDITION.

The most obvious, and, though mechanical in its nature, practically perhaps the most important improvement in the present edition, consists in the separation of all examples from the text, continuously with which they were formerly printed. Standing apart, the examples now catch the eye readily; and the longer paragraphs, broken up thereby, present to students a less formidable aspect.

My main objects however in re-writing the whole work have been to sift and enrich the subject-matter, to arrange it better, and to state it both more precisely and more simply.

In preparing the first edition, I derived most aid, as was mentioned in my former preface, from Jelf's Kühner, Madvig, and Asopios. For the enrichment of the subject-matter in the present edition, I am so little indebted to any book save Crosby's Greek Grammar* that I mention it alone here; and besides I refer

* A Grammar of the Greek Language by Alpheus Crosby, Professor of the Greek language and literature in Dartmouth College, 37th edition, Boston: Crosby and Ainsworth, 1865.

to it particularly hereafter, wherever my obligations to it have been considerable.

With a view to precision, the comparison of Greek usage with that of the Latin language has been more frequently instituted and further pursued than in former editions.

The illustration of Greek idioms by modern instances, which has been often reported to me as a peculiar excellence of this work, will be found on a still larger scale in the present edition.

The English Summary and the Chapter on Accents have been added at the suggestion of gentlemen who have either tested the book by teaching with it, or who on perusal have been so far pleased with the book as to take an interest in its improvement.

The Greek Summary was originally written for the purpose of assisting teachers who might aim at the free speaking of Greek to conduct the parsing lessons in Greek. But I am not aware that oral sentence-making, an exercise as beneficial in teaching Latin and Greek as it is in teaching French and German, has in a single instance either begun with or attained to the parsing of Greek words in the Greek language, and there is not the smallest chance of such an attempt being made now; for all teaching is now environed and limited by examinations not one of which offers a single mark for so odd an accomplishment. Nevertheless, the Greek Summary is reprinted, partly because historically it belongs to the work, partly because it can hardly fail to interest both teachers who have not ceased to grow, and students who in respect of Greek are growing apace.

X AUTHOR'S PREFACE TO THE FOURTH EDITION.

As before, the Indexes are intended to enable the student both to consult the work on any particular subject, and to examine himself on its contents.

EDINBURGH 1. October, 1870.

JAMES CLYDE.

GREEK SYNTAX

WITH A RATIONALE OF THE CONSTRUCTIONS.

INTRODUCTION.

§ 1. **Object of the Work.** *Σύνταξις* = *compositio* = 'a putting together'. Rules of *Syntax* therefore are rules of *composition*; and the object of this work is to investigate the rules according to which Greek words are put together (*συντάσσονται*) in speech.

Obs. 1. **Rules of Syntax not Arbitrary.** Because speech expresses thought, the rules of Syntax are based on the principles of logic. As the simplest *thought* implies two *ideas*, and consists in mentally affirming — to take the most common and intelligible form* of the mental act — them of each other; so the simplest *sentence* contains two *words* or *phrases*, with the addition generally (§. 9. Obs. 1. c.) of some lingual contrivance that marks outwardly the inward affirmation of the mind. These indispensable elements of a sentence have been called by logicians

Subject = what is spoken about.

Predicate = what is said about the subject.

Copula = the lingual contrivance above-mentioned.

Whether the subject and predicate be made up of many words or of few, these words, besides themselves representing ideas, are combined in forms which vary so as to represent also the relations of the ideas to each other. Consequently, not only the general structure of a sentence, but all the ways of combining

* Each mood of the verb answers to some form of the mental act, or rather to several of them; for there are more forms of the mental act than moods in the verb.

words in its several parts, i. e. all the rules of Syntax find their ultimate justification in correspondence with the laws of thought.

Obs. 2. The Copula. Many discard the word *copula*, and consider that which it is used by others to denote as forming part of the *predicate* — a mere difference of terminology. What is meant however by the *copula* or *tie* in a sentence is precisely that without which words do not generally make a sentence.

Good God! John fighting! = two exclamations.

Good is God. John is fighting! = two sentences.

The *finite* substantive verb pronounced without emphasis is more especially regarded as the copula, which else is recognised in the ending of some other *finite* verb. On this account it is that the verb is so called, *verbum, the word* by way of eminence, $\phi\eta\mu\alpha$ ($\varepsilon i\varphi\omega$ = *I say*), the *telling* part of speech i. e. the part of speech without which nothing can be *told*. Only such forms of the verb as have personal endings are called *finite*, because they only are *confined* to one number and person; and in contrast with them stand the *infinitive* forms, which go with any number and person.* The personal endings of the finite verb, when made to correspond with the number and person of the subject, refer the verb to the subject: in other words, the personal endings of the finite verb fit it to be the *copula* or *tie* between subject and predicate.

Obs. 3. The Simple Sentence. A sentence that has but one finite verb in it is a *simple* sentence; and such a sentence may consist of but one word, the indispensable finite verb. The only part of the English verb by which a complete thought can be expressed in one word is the imperative; but in Greek, owing to the greater wealth of personal endings possessed by the verb, affirmation and wishes, as well as commands, can be expressed by the verb unaided. Of the following three examples, the last equally with the first and second, is a complete simple sentence.

$\Sigma\bar{\nu} \pi\lambda\omega\sigma\iota\omega \varepsilon\bar{\iota}$ }
 $\Sigma\bar{\nu} \pi\lambda\omega\tau\epsilon\bar{\iota}\omega$ }
 $\Pi\lambda\omega\tau\epsilon\bar{\iota}\omega$ } = thou art rich.

It must not however be supposed that the simple sen-

* Latin affords the clearest illustration of the *finite* forms changing with number and person, while one and the same *infinitive* form goes with all numbers and persons.

Ego	aegrot-o	Dico me	aegrotare.
Tu	- - as	- te	
Quis	- - at	- neminem	
Nos	- - amus	- nos	
Vos	- - atis	- vos	
Omnes	- - ant	- omnes	

tence is necessarily short. Any amount of descriptive matter may accompany the subject, provided it be conveyed by adjectives or adjectival phrases; and not only may the verbal predicate be accompanied by an object similarly described, but any amount of circumstantial matter, for instance as to time, place, and manner, may be grouped around it. The simple sentence is not therefore necessarily short; but, whether long or short, a sentence is simple if it contain but one finite verb.

Obs. 4. Sentences Compound and Complex. A combination of simple sentences is also called a sentence; but, for distinction's sake, the simple sentences themselves are then called *clauses*. The combination is called a *compound* sentence if the clauses are combined with one another by *coordination*; and a *complex* sentence if they are combined by the *subordination* of some to others: e. g.

Thou art rich; but I am poor = *Compound*.

Though thou art rich, thou art not happy = *Complex*.

Every subordinate clause is in its nature substantival, adjectival, or adverbial, i. e. does the work of a substantive, an adjective, or an adverb, — a fact which recurs in all languages, because it answers to the necessary organisation of thought. Substantival clauses are twofold:

Declarative, as 'I say (what?) that etc.'

Interrogative, as 'I ask (what?) whether etc.'

Adjectival clauses are of one kind, and, being always introduced by some relative pronoun, are therefore called

Relative, as 'I (what sort of?) who know etc.'

Adverbial clauses are introduced by a great variety of conjunctions, and denote the manifold circumstances of an action, as its *where*, its *when*, its *how*, its *cause*, its *aim*, its *result*.

Obs. 5. Infinitival Clauses. The so-called *infinitival* clause in Greek and Latin is not strictly speaking a clause; because a clause is a sentence, and the *finite* verb is necessary to a sentence (Obs. 2). Nevertheless, the infinitival clause is often translated into English by means of the finite verb, which shows that it differs only in form from the sentence properly so called: it is indeed a brief and neat way of expressing the subordinate clause after *verba sentiendi et declarandi*; so that the phrase infinitival clause is not without justification. In Greek, there are also *participial* clauses, so called because they also imply a sentence; and the English language is flexible enough to represent without clumsy circumlocution the three forms of the Greek: e. g.

Oīδα ὅτι οἱ ἀνθρώποι θνητοί εἰσιν = I know that men are mortal.

Oīδα τοὺς ἀνθρώπους εἰναὶ θνητούς = I know men to be mortal.

Oīδα τοὺς ἀνθρώπους θνητοὺς ὄντας = I know men as being mortal.

The Latin language, with its usual rigour, admits of only one form, the infinitival, *Scio homines esse mortales*.

§ 2. Method of the Work. Since words form the materials of Syntax or Composition, and the rules of Syntax depend on the meaning of words and of their grammatical forms (§ 1. Obs. 1.), it is proposed first to review the words of the Greek language according to the usual classification of the parts of speech. Not that this classification is perfect; for, however sharply distinguished from one another these different parts of speech at first sight appear, they do nevertheless imperceptibly pass into one another. But the common classification is probably not more imperfect than any other that might be invented, since in thought, as well as in language, there are no boundary lines, but only border-territories; and it has the great advantage of being already familiar to the student. The rules of Syntax themselves will then be treated of, first as they relate to words, next as they relate to sentences. The whole work therefore is divided into three parts.

- I. The Materials of Syntax.
- II. The Syntax of Words.
- III. The Syntax of Sentences.

Obs. Irregularities in Greek Syntax. The student must not expect to find every difficulty solved in this work. The analysis of language proceeds on the supposition that it is the articulate expression of mind; but mind is not always or merely logical. Thought is often unclear in itself, often complicated with emotion; and to the imperfections of mind must be added the imperfections of language. Thought is often too subtle, passion too strong, conversation too rapid for language; hence ellipses, idioms, and manifold departures from the norm, which are often only confessions of weakness, or actual down-breakings on the part of language in its attempt to render fully, or to keep pace with thought. Besides the logical and emotional elements, euphony *

* A familiar instance of the power of mere sound, in

must also be taken into account; and these magistral influences are modified in an endless variety of ways by the peculiar genius and fortunes of each people. Syntactical irregularities are particularly numerous in Greek. From the variety of dialects, and the long duration of the classic era, throughout which the analytic forms of language were growing up by the side of the synthetic, without however supplanting them, the *totality* of Greek appears not so much a continent of fixtures, as an ocean of moving forms: and even in one dialect, and at one period of its history, that rigid uniformity of construction which the Latin observed is not found in Greek. This comparative lawlessness seems to have arisen partly from the liberty of the individual who, in endeavouring to translate his own mind into language, did not so much conform to an objective model as obey the formative powers within him; and partly from the agility of the Greek mind, which looked on the same transaction now as a process having a beginning and an end, now as a single act; and which regarded itself, in respect to the same operation, now as receptive, now as active, and, in respect to the same event, now as an immediate witness or even a participator, and now as a distant reporter. It is impossible however, by means of these, or of any other considerations, to explain all anomalies. Jelf (§ 832) justly remarks in regard to some of Kühner's explanations of the optative with $\alpha\nu$: "In this, as in many, if not most constructions in Greek, it seems to be unreasonable to try to bind down writers to laws for which no reason can be given, and which they evidently did not always observe. It could hardly

determining the use of lingual forms, is the *me* of the Scotch dialect for *I* emphatic, or the *moi* of the French for *je* emphatic. Thus 'Moi! je ne ferai rien de la sorte' = 'Me! I'll do nocht o' the kin'. The corresponding forms *moi* and *me*, in these examples, are not copies of each other: both have come into use as emphatic nominatives, because the ordinary nominatives, from their mode of pronunciation, — *je*, and the Scotch *I* being both obscure short sounds — were incapable of receiving and transmitting the full volume of sound required by emphasis. Accordingly in English, German, and Italian, where the ordinary nominatives *I*, *id*, *io*, are so pronounced as easily to admit of vocal emphasis, no forms are used parallel to the French *moi* and the Scotch *me*. That which is classical in French and Scotch is unclassical, and in fact ungrammatical in English, simply because kindred forms happen to be pronounced *ore rotundo* in England, and between the teeth in France and Scotland.

fail to be more profitable if, admitting the exceptional passages, we endeavour to catch the shades of meaning which are conveyed by the more or less usual construction." The distinct statement and rational explanation of these more or less usual constructions is what the student has a right to require; and he must remember that the *prevailing* usage is an absolute law to foreigners, particularly learners.

PART I. MATERIALS OF SYNTAX.

THE ARTICLE.

A weak demonstrative Pronoun.

§ 3. **Threefold Force of ó ἢ τό.** In English, *the* is only a weaker form of *that*; and in the modern Romanic languages, the definite article is uniformly derived from Latin demonstratives. Compare

Alexander ille magnus.

Alexandre le grand.

Alexander the great.

rien de la sorte } = nothing of *that* kind.
nothing of the kind } = nothing of *the* kind.

The Greek ó ἢ τό is at once a demonstrative, a relative, and the definite article. As its originally demonstrative force came to be toned down, stronger demonstratives, the substantival αὐτός, and the adjectival οὗτος, both containing its own primitive form (*TOΣ*), appeared; and out of its demonstrative force arose the relative as explained in § 4. This threefold use of ó ἢ τό is preserved in Modern Greek: as the definite article, *passim*; as a demonstrative,

εἰς τὸν δοτικὸν θελήσην = to *him* who shall be willing, as a relative, in antiquated expressions belonging to the Romaic or vulgar dialect. Compare

(Proverb) *τὰ φέρνει ἡ ὥρα, ὁ χρόνος δὲν* τὰ φέρνει* = *What an hour brings, that a year brings not.*

* This δέν, a corruption of οὐδέν, is the Romaic negative adverb: φέρνει = φέρει. Compare the classic φερνη = *dowry*.

(Il. I. 125) $\tau\grave{\alpha}$ $\mu\grave{e}n$ $\pi\grave{o}l\grave{w}o$ ν $\acute{e}x\acute{e}p\acute{o}r\acute{a}th\acute{o}m\acute{e}v$, $\tau\grave{\alpha}$ $\delta\acute{e}d\acute{a}st\acute{a}i$ =
 What we pillaged out of cities *that* has been
 divided.

The same threefold use of the article exists in German, as:

Der Mensch den ich befreundete, der hat's gethan.
 The man *whom* I befriended, *he* has done it.

Conformable to this threefold use of the Greek article is its kinship in the language. The pronominal forms δ , $\delta\varsigma$, $TO\Sigma$, $\tau\iota\varsigma$ "may be traced back to a common foundation in an old *definitive* which had two roots, the rough breathing and the τ , and which performed the offices both of an article, and of a demonstrative, personal, and relative pronoun". (Crosby § 147). Donaldson ingeniously suggests that $\delta\varsigma$ became δ by dropping its sigma in such combinations as δ (ς) $\grave{a}y\acute{a}\vartheta\grave{d}\varsigma$ $\grave{a}n\acute{h}\rho$, to avoid the repetition of the sibilant, just as in similar combinations the German *adjective* drops final r , while the definite article retains it.

$\delta\varsigma$ $\grave{a}y\acute{a}\vartheta\grave{d}\varsigma$ $\grave{a}n\acute{h}\rho$ became δ $\grave{a}y\acute{a}\vartheta\grave{d}\varsigma$ $\grave{a}n\acute{h}\rho$ }
 Der gute Mann = der gute Mann } the good man.

Obs. 1. 'O $\dot{\eta}$ $\tau\acute{o}$ in Homer. a. In reading Homer, the student must not connect δ $\dot{\eta}$ $\tau\acute{o}$, even when unaccompanied by a particle, with a noun, whenever he can: on the contrary, he must presume on its demonstrative force, and translate it independently if he can, as (Il. I. 488—9):

*A*ντ \grave{a} ρ δ $\mu\acute{h}ni$ ε $\eta\acute{h}n$ σ \acute{i} $\pi\acute{a}r\acute{h}m\acute{e}n$ o \acute{s} $\grave{a}n\acute{h}n\acute{p}\acute{o}r$ o \acute{i} σ \acute{i} ,
*A*ιoγe \acute{h} η \acute{s} *P*ηλ \acute{h} eo \acute{s} *v*i \acute{h} o \acute{s} , $\pi\acute{o}d$ as $\omega\acute{h}n$ σ *A*ch \acute{h} il \acute{h} le \acute{s} =
 But, sitting by the swift-sailing ships, *he* nursed his wrath,
 Achilles swift of foot, Jove-descended son of Peleus.

This anticipative use of *he* is quite according to our conversational and ballad style, as when we say, 'He was a great poet, Milton', instead of 'Milton was a great poet', or, 'When *he* sank in her arms, the poor wounded Hussar' (Campbell).

b. Because δ $\dot{\eta}$ $\tau\acute{o}$ was in Homer only beginning to be used as an article, those distinctions which, as article, it marks in Attic Greek are not to be looked for in Homer. As in Latin the context alone guides the student in translating *video regem*, 'I see *a* king', or 'I see *the* king', so in Homer the context alone determines whether $\alpha\acute{v}\tau\acute{o}\varsigma$ = *ipse* or = *idem*; whether

ἄλλοι = others or = the others i. e. the rest. Where, as in (Il. II. 1.)

ἄλλοι μέν δα θεοί τε καὶ ἀνέρες,
Homer's *ἄλλοι* = of *ἄλλοι*, Zenodotus would read *ἄλλοι*, which however, being pure Ionic, critics do not allow. In a few passages of Homer, of *ἄλλοι* (Il. XVII. 280), and ὁ αὐτός (Il. VI. 391) are found as in Attic (§. 7. e.).

Obs. 2. *Ο ή τό demonstrative in Attic.* In Attic prose, the demonstrative force of ὁ ή τό appears only when it represents a governing noun omitted before its dependent genitive (§. 8, Obs. b.); when it is fortified by particles, by μέν, δέ, γάρ, especially; with prepositional phrases (§. 6. d.); and in a few set expressions, as

τό καὶ τό = this and that, *διὰ τό* = for this (reason),
πρὸ τοῦ = eheDEM = before that (time).

a. Both the aspirated and the τ- forms of the article are used demonstratively with μέν, δέ, γάρ, even those aspirated forms which came to be chiefly relative in force, as (Dem. 248. 18)

ἄς μὲν ἀναιρῶν, εἰς ἄς δὲ τοὺς φυγάδας κατάγον =
destroying some (cities), taking back the exiles to others.

Both the aspirated and the τ- forms are used before a dependent genitive to represent the omitted governing noun (§. 8, Obs. b.). But the τ- forms are alone found with γέ and καί, except in the nominative case, where ὅς is used to denote persons after καί,

καὶ ὅς = et is = and he

and in the formulae

ἡ δ' ὅς = quoth he, ἡ δ' ἡ = quoth she.

b. The remarkable Attic formula, which Herodotus also uses, *ἐν τοῖς πρῶτοι* = among them first i. e. first of all, illustrates the demonstrative use of ὁ ή τό. Compare (Il. V. 395)

Ἄτλης ἐν τοῖσι πελώριος =

Pluto mightiest among them,

where *τοῖσι* refers to the preceding *πολλοί* (line 383). The Attic usage may generally be explained by the ellipsis of a participle, as (Thuc. I. 6. 3)

Ἐν τοῖς πρῶτοι δὲ Ἀθηναῖοι τόν τε σίδηρον κατέθεντο =

And the Athenians were the *first of all* to lay aside their arms, where the insertion of *καταθεμένοις* after *τοῖς* would complete a regular construction. This formula however became at length adverbial, *ἐν τοῖς = πρὸ πάντων*, for it remains the same in whatever gender and number *πρῶτος* may follow, as (Thuc. III. 81. 6.)

Οὐτως ὡμὴ ή στάσις προύχωρησε καὶ ἔδοξε μᾶλλον, διότι
ἐν τοῖς πρώτη ἐγένετο =

The sedition went on thus cruelly and seemed to be the more cruel, because it was the *first of all*.

c. In the style of the N. T. itself, ὁ ἦ τό is always an article; but the quotation from Aratus (Acts 17. 28.),
 $\tauοῦ γὰρ γένος ἐσμέν$ = for we are his offspring, is an example of its demonstrative use.

§ 4. 'Ο ἦ τό Relative. The coordination *in form* of clauses *logically* subordinate is the primitive structure of language (§ 52), and abounds in Homer, as (Π. XV. 553):

Ναῖε δὲ παρὰ Πριάμῳ· δὲ μιν τίεν ίσα τέκεσσι =
 And he lived with Priam, *who* honoured him as a son, but literally δέ δέ = 'and he'. This primitive structure is also common in the loose style of Herodotus. But, as soon as men perceive the logical subordination of a clause beginning with *he*, *that*, or any other demonstrative, the demonstrative word begins to acquire a relative force; and, when this perception has become distinct and permanent, the relative force of the demonstrative word is established. Thus it is that the English demonstrative *that* has become an English relative. In Homer, it is often indifferent whether δέ ή τό be translated by the demonstrative, or by the relative, as (Π. I. 324—5):

*Εἰ δέ κε μὴ δώησιν, έγώ δέ κεν αὐτὸς ἔλωμαι,
 'Ελθὼν σὺν πλεόνεσσι· τό οἱ καὶ φίγιον ἔσται* =
 And if he give her not up, I myself will come with a more numerous following, and take her, *which* will be even worse for him,

or pausing at *her*, and making the last clause independent, — 'that will be even worse for him'. The Ionic and Doric writers generally, as well as Homer, use δέ ή τό as a relative, but in Attic this usage is confined to the tragedians, who employ it only in the oblique cases, and chiefly in the neuter gender, as (Soph. Oed. T. 1378—81):
 $οὐδὲ δαιμόνων ἀγάλματ' ἱερά, τῶν... ἀπεστέρησ' ἐμαυτόν$ = note even sacred images of gods, *where of.. I bereft myself.**

* How nearly related the primary functions of the ar-

§ 5. 'Ο ἡ τό as **Definite Article**. The definite article is so called, because it either introduces a specification which *defines* the reference of a noun, as

Σωκράτης ὁ φιλόσοφος = Socrates *the* philosopher, or alludes to some such specification understood by the parties speaking, as

οἱ τριάκοντα = the thirty (tyrants at Athens),

οἱ ἔνδεκα = the eleven (executioners at Athens),

τὰ δύο μέρη = the two (third) parts i. e. two-thirds.

The understood specification, according to its nature, either *individualises* or *generalises* the idea of the substantive. Thus if I say ὁ βοῦς = 'the ox', it cannot be known, either in Greek or in English, whether I mean some ox in particular, or oxen in general: that must be made out from the nature of the whole statement. In

ὁ βοῦς ζῶν χρησιμώτατόν ἐστιν =
the ox is the most useful animal,

ticle and the relative are, even when their forms have come to differ, appears by the comparison of such phrases as

Ἄντιοχος ὁ στρατεύσας δεύτερον ἐπὶ Πάρθονς

Ἄντιοχος ὃς ἐστράτευσε δεύτερον ἐπὶ Πάρθονς.

This affinity is accurately marked by the language of the ancient Greek grammarians, who called both of them ἄρθρα = *articuli* = 'joints', because both serve εἰς συνάρθρωσιν λόγον i. e. for the compacting, as by joints, of discourse. To distinguish them, the article was called ἄρθρον προτακτικόν, and the relative ἄρθρον ὑποτακτικόν. But the position of the article is a mere accident. In Danish, and indeed in all the Scandinavian dialects, the article is post-positive. Again, as in Latin the position of *ille* was optional, it has happened that the article is praepositive in Italian, after the model of *ille homo*, and post-positive in Wallachian, after the model of *homo ille*, the Wallachian language equally with the Italian being a daughter of the Latin. In Homeric Greek too, when ὁ ἡ τό is a demonstrative *adjective* pronoun, and is followed by a relative, it is usually postpositive, as (Il. V. 319, 320.)

οὐδ'... ἐλήθετο συνθεσιάων τάων ἃς ἐπέτελλε Διομήδης = nor forgot he *those* commands which Diomedes gave him.

the understood specification is *the animal so called*: on the other hand, in

ὁ βοῦς ἐσφάγθη = the ox has been killed, the understood specification is *the one you and I know about*. This latter specification, which individualises the idea of the substantive, is often expressed by a relative clause, as: 'The ox, *which you sold me* has been killed'.

Obs. 1. **The Article with Common Nouns.** *a.* The use of the article to *individualise* its substantive is precisely the same in Attic Greek as in English: but not so its use in *generalising* the substantive. In English, classes are denoted, or, to speak more accurately, the *type* of a class is denoted by prefixing the article to the singular substantive, as 'the fox', 'the lawyer' &c. with the single exception of *man*, who, on account of his singularity among living beings, is named as God is named: we say 'man', not '*the man*', just as we say 'God', not '*the God*'. In Greek, this exception does not exist: and in generalisations, the use of the article before the singular is optional. Plato has ἐπειδὴ ὁ ἄνθρωπος θεῖας μετέσχε μοίρας = since *man* partook of a divine element, ἄνθρωπος θειότατον ἡμερώτατόν τε ξῶν γίγνεσθαι φιλεῖ = *man* is wont to be the divinest and gentlest of animals.

With plural nouns, only the individualising power of the Greek article can be imitated in English: its generalising power is possessed by the English article in the plural with adjectives only, as *of πλούσιοι* = the rich.

b. With common nouns, the article has also, and especially after numerals, a distributive force, as

{ δὶς τὸν μηνός = twice a month,
 { due volte il mese = zweimal den Monat.

Obs. 2. **The Article with proper Names.** *a.* Names of persons do not require the article, not even with a demonstrative (§. 7. a), as

οὗτοῖς Ἀπατούροις = this Apaturius here.

Especially, they do not take the article when they are followed by a defining phrase which itself begins with the article, as

Σωκράτης ὁ φιλόσοφος = Socrates the philosopher.

In general, the article should not be prefixed to proper names except when the bearer of a particular name is to be distinguished from all his namesakes, either as being pre-eminent, or as having been previously mentioned. Thus ὁ Σωκράτης is admissible, either as referring to the famous sage, as we say '*the Chisholm*' to distinguish the head of the clan; or as denoting

some particular Socrates already spoken of.* In like manner, Θεός may have the article prefixed. In 1. Cor. 15. 58, Κύριος occurs first with and then without the article. As we say *Pharaoh*, so the Greeks used βασιλεύς without the article for the Persian king. Sometimes however proper names are accompanied by the article without any apparent reason. The generalising power of the Greek article with plurals (§. 5. Obs. 1.) holds in the case of proper names, as

οἱ Ἑλλήνες in opposition to οἱ βάρβαροι.

b. Names of places (§. 8. Obs. a.) commonly take the article; and with the appended specification of *mountain*, *river* &c. are variously written, as
οἱ Εὐφράτης ποταμός, οἱ ποταμὸς οἱ Εὐφράτης, Σικελία ἡ νῆσος
but the first of these formulae is the most common.

Obs. 3. **The Article with Quasi-Proper Names.** Names of striking natural objects, of occupations, arts and sciences, of virtues and vices, of near relatives, and of familiar places, because they denote what is capable of being personified or regarded as unique, may, like proper names, be used without the article, particularly when governed by a preposition. Most of these usages are paralleled in English. The English poet can sing of ocean's roar and of 'sun, moon and stars' without the article; and we may ask a child, 'What does father say to this?' *father* being, in the child's language, not the name of a class, but the name of an individual, i. e. a proper name. So also we talk of a man being 'on 'Change', or 'at church', or 'in town', as the Greeks talked of a man being ἐν ἀστει, ἐν ἀγορᾷ.

Obs. 4. **More or less frequent Use of the Article.** Only the most general rules can be given for the use of the article in English; and Greek practice is still more inconstant. Because οἱ η τό defines, it is more used in prose, especially in philosophical compositions, where clearness and precision are first necessities, than in poetry and rhetorical compositions generally, where rapidity and vivacity are subserved by its omission. Greek writers were, in regard to this matter, urged by opposing influences, the prestige of ancient example, on the one hand, inviting them to omit the article where it *might* be used, and the tendency of the language towards analytic development, on the other hand, inviting them to use it, where it *might* be omitted.

* In German, the definite article is prefixed to the names of inferiors whose position in the household is well known, as *Der Johann soll das Pferd bringen* = 'John is to bring the horse'; here the article alludes to the understood specification *who is our coachman*.

Owing to this development, the later the author the more frequent is its use; and not till after the classical era did the article come to be used wherever it possibly could, as in the Greek of the present day, and in French.

§. 6. Substantival Phrases formed and declined through all cases by means of the Article. These are formed

a. With infinitives, as

τὸ ἀμαρτάνειν = *il peccare* = sinning.

b. With adjectives and participles in both numbers, the corresponding English idiom being confined to plural adjectives*, as

οἱ ὀλίγοι = the few, the oligarchy,

οἱ πολλοί = the many, the mobocracy,

οἱ ἔχοντες = the rich, *οἱ τυχόντες* = chance people,

ὁ πλούσιος the rich man, *ὁ βουλόμενος* = whoever will,

Κῦρος ὁ βασιλεύων = *Κῦρος ὁ βασιλεύς* = Cyrus the King.

Adjectives and participles so used may preserve their proper regimen, as

οἱ τὴν πατρίδα ὀφελοῦντες =

the benefactors of their country.

With the neuter singular of adjectives, the article forms *abstract nouns*, as

τὸ καλόν = the beautiful, but *τὰ καλά* = beautiful things.

Concrete however are the tragic

τὸ ἐμόν, τὰ μά = I and all belonging to me.

Also *collective nouns*, especially from adjectives in *-ικός*, as

τὸ ἵππικόν = the cavalry, *τὸ πολιτικόν* = the citizens,

(*τὰ ἵππικά* = horse-exercises), *τὸ ἐναντίον* = the enemy, *τὸ δωδεκάφυλον* (Acts 26. 7) = the twelve tribes.

* Here also, the German usage is co-extensive with the Greek, as

der Gute = the good man, die Gute = the good woman,

das Gute = the good (absolute), die Guten = the good people,

der Getötete = the person killed, die Reisenden = the travellers,

das Geschehene = what has happened.

c. With adverbs, mostly in the plural, as
οἱ πάνυ = the *elite*, *τὰ ἐνθάδε* = affairs here.

d. With prepositional phrases, as
οἱ περὶ Ἀλέξανδρον = Alexander and his suite,
οἱ ἀμφὶ Πλάτωνα = Plato and his school,

but sometimes 'his disciples alone', and sometimes 'Plato alone', by an exaggeration of the principle that politeness lies in indirectness of speech.

e. With dependent genitives, as
τὸ τοῦ Δαρείου = Darius' saying.

The plural masculine of the article with the genitive of a proper name is frequent, as

οἱ Μένωνος = Menon's people, or troops,
 and still more frequent is the neuter plural of the article with the genitive of a noun whether proper or common, as

τὰ τῆς τύχης = the dealings of fortune,
τὰ τῶν Ἀθηναίων = the interests of the Athenians,
τὰ τῶν διακόνων = *οἱ διάκονοι*
 for in Soph. Phil. 497 *τὰ τῶν διακόνων* is followed by *ποιούμενοι* in apposition.

f. With whole sentences, as

τὸ ήν πείσωμεν ὑμᾶς, ὡς χρὴ ήμᾶς ἀφεῖναι =
 the persuading you that you ought to let us go.

Obs. 1. The Substantival Infinitive. a. The infinitive with the article becomes a noun, only in so far as, by the declension of the article, it may represent any case: it still retains its regimen as a verb, as

τὸ ἔπιστολὴν γράψειν = the writing a letter,

and any quality or circumstance attributed to it must be expressed not adjectively, but adverbially. The substantival Infinitive, and infinitive clauses used substantively with the article frequently occur under the government of prepositions; and a great variety of circumstances, according to the meaning of the preposition, are thus expressed, e. g. *cause*, as

οὐδὲν ἐπράχθη διὰ τὸ ἔκεινον μὴ παρεῖναι =
 nothing was done, because he was not present.

b. Without the article, the infinitive may be used substantively in the nominative, as

Oὐχ ηδὺ πολλοὺς ἔχθροὺς ἔχειν =

It is not agreeable to have many enemies.

Hence, with impersonal verbs; for in *δεῖ λέγειν*, the infinitive *λέγειν* is really the subject of *δεῖ*. Also in the accusative case, as

ἀναβάλλομαι ἀποκρίνεσθαι = I delay answering,

for the infinitive really answers here to the question *what?* and expresses the direct object of *ἀναβάλλομαι*, though the true nature of this construction is commonly lost sight of in the rule that one verb governs another in the infinitive. But the infinitive must have the article in order to represent the genitive or dative. Neither can the anarthrous infinitive represent a case dependent on a preposition. The only preposition ever used with the anarthrous infinitive is *ἀντί*, and that by Herodotus alone (I. 210. 8.)

ἀντὶ δὲ ἀρχεσθαινέπελλων, ἀρχεῖν ἀπάντων =

instead of being ruled by others, to rule over all.

Obs. 2. Adverbial Expressions formed by the Article. Substantival phrases formed by the article in the neuter gender, and commonly also in the accusative case (§. 16. d.), are largely used adverbially, as

*τὸ εμοῦ = { what belongs to me (substantival),
for my part (adverbial).*

Such phrases are

<i>τὸ πρῶτον</i>	= firstly,	<i>τῷ παντὶ</i>	= in every respect,
<i>τὸ δεύτερον</i>	= secondly,	<i>τῷ πολλά</i>	= in most respect,
<i>τὸ τελευταῖον</i>	= lastly,	<i>τῷ ὅλῳ</i>	
<i>τὸ ἀρχαῖον</i>	{ = anciently,	<i>τὸ ἐνύπαν</i>	{ = on the whole,
<i>τὸ παλαιόν</i>		<i>τὸ ἐπίπαν</i>	
<i>τὸ λοιπόν</i>	{ = in future,	<i>τὸ πλέον</i>	{ = for the more part,
<i>τὰ λοιπά</i>		<i>τὰ πλείω</i>	
<i>τὸ νῦν</i>	{ (Scot. <i>the noo</i>) =	<i>τὸ μέγιστον</i>	= for the greatest part
<i>τὰ νῦν</i>	{ now,	<i>τὸ μάλιστα</i>	= in the highest degree.
<i>τὰλλα</i>	= in other respects,		

§. 7. The Article with Pronouns. *a.* When the demonstratives *οὗτος*, *οὗτος*, *ἐκεῖνος* are joined attributively to nouns, these nouns take the article in Attic prose, but are often found without it in the poets, particularly after *οὗτος*. The order is*

δ ἄνθρωπος οὗτος, or οὗτος δ ἄνθρωπος,

* The demonstratives of quality *τοιοῦτος*, *τοιόσδε*, and those of quantity *τοσοῦτος*, *τοσόσδε*, *τηλικοῦτος*, *τηλικόσδε* follow the same rule. (§. 27.)

the article being prefixed to the noun, and the demonstrative either preceding or following both. When an adjective or adjectival phrase accompanies the noun and article, inasmuch as the adjective and the noun may be regarded as expressing one complex notion, the same order may be maintained, as

αὗτη ἡ στενὴ ὁδός or *ἡ στενὴ ὁδός αὗτη*,

but the more common formula is

ἡ στενὴ αὗτη ὁδός = this narrow way.

b. The article accompanies the possessive adjective pronouns when used definitely, as in Italian,

τὸ σὸν μένος = *la tua ira* = that wrath of thine,

ὁ ἔμος ἀδελφός = my brother (definite),

ἔμος ἀδελφός = a brother of mine (indefinite).

The prefixing of the article implies 'the only brother I have', or 'the one previously mentioned', at any rate 'the one you and I mean'. The formula *ὁ πατὴρ ὁ σός* is also used (§. 26.).

c. The article accompanies the interrogative adjective pronouns when the question regards something which has been already mentioned, as

τὰ ποῖα; = what? as we say, *the what?*

i.e. 'of what sort are the things you have just mentioned'. Compare the French interrogative *lequel*.

d. The article is found with a relative pronoun only in the peculiar expressions of which *ὁ οἶος σὺ ἀνήρ* is the type (§. 67. Obs. 3. b.).

e. The two meanings of *αὐτός* in Homer (§. 3. Obs. 1. b.), *ipse* and *idem*, are in Attic Greek distinguished by different collocations of the article with *αὐτός*.

ὁ αὐτὸς ἄνθρωπος = the same man (*idem*),

αὐτὸς ὁ ἄνθρωπος } = the man himself (*ipse*).

ὁ ἄνθρωπος αὐτός } = the man himself (*ipse*).

f. *Πᾶς* and its compounds, with the article, denote a total: without it, their force is distributive.

{ *τὰ πάντα δέκα* = ten in all,

πάντα δέκα = ten of each.

{ ἀνὰ πᾶσαν τὴν ἡμέραν = the whole day,
 { ἀνὰ πᾶσαν ἡμέραν = every day.

In the plural however, even when a total is meant, the article is often omitted

πάντες ἄνθρωποι = *οἱ ἄνθρωποι πάντες*.

The usual collocation with the article and a noun is predicative in form (§. 9.),

ἡ πόλις πᾶσα or πᾶσα ἡ πόλις = the whole city.

But *πᾶς*, and more frequently *ὅλος*, is also found in the attributive formula (§. 8. a.).

g. The meaning of *ἄλλος* is thus modified by the article, *ἄλλη χώρα* = another district = *alius ager*, *ἡ ἄλλη χώρα* = the rest of the district = *reliquus ager*.

h. The article intensifies the distributive force of *ἐκάτερος* and *ἐκαστος*, the latter of which however is often found without it. The collocation of them, and also of *ἀμφω* and *ἀμφότεροι*, with the article and a noun is predicative in form (§. 9.)

τὰ ὡτε ἀμφοτέρω }
 ἀμφοτέρω τὰ ὡτε } = both the ears.

Obs. 1. Demonstrative Pronouns without the Article. When demonstrative pronouns are used, not attributively (§ 7. a.) but substantively, the article is omitted; and when the substantival demonstrative stands in apposition to a following noun, it must not be translated as if it were attributive, as

(Attributive) *τούτῳ τῷ διδασκάλῳ χρῶνται* =
 they have this teacher,

(Appositive) *τούτῳ διδασκάλῳ χρῶνται* =
 they have this man as teacher.

Even the substantival demonstrative however takes the gender and number of the noun to which it stands in apposition, as

ταύτῃ ἀπολογίᾳ χρῆται = he uses this as an excuse.

Compare *ea demum est vera felicitas* = 'that indeed is true happiness'.

Obs. 2. 'Ο η τό. Englished by Possessive Pronouns. The Greek article supplies the place of the English possessive pronoun, wherever, from the nature of the statement, or from the context, the possessive reference is already obvious, as
οἱ γονεῖς στέργονται τὰ τέκνα = parents love *their* children,
ὁ βασιλεὺς σὺν τῷ στρατεύματι = the king with *his* army.

Had the children not been the parents' own, or the army not the king's own, then a possessive pronoun, or some phrase, must have been used to indicate whose they were. The French idiom agrees with the Greek to a considerable extent, particularly in respect to parts of the body, as

ἀλγῶ τὴν κεφαλήν — j'ai mal à la tête — I have a headache. So does the German. English contains only a few isolated examples, as 'I gave him a slap in *the* face', 'the apple is bad at *the* heart'.

§. 8. **The Article with Attributives.*** *a.* The common attributive formula is the same in Greek as in English,

ὁ ἀγαθὸς ἀνήρ = the good man.

Agreeably to this formula, whatever words intervene between the article and its noun are to be held as attributive. In this way, adverbs, prepositional phrases, and even infinitival clauses are converted by the article into adjectival phrases, as

ὁ τότε βασιλεύς	= the <i>then</i> king,
ἡ ἥδη χάρις	= the <i>present</i> favour,
ὁ μεταξὺ τόπος	= the <i>intermediate</i> place,
ἡ πρὸς Ἀθήνας δόδος	= the road to <i>Athens</i> ,
διὰ τὴν ἀεὶ μελέτην	= on account of the <i>constant</i> practice,

τῆς γε πρὶν ἀρχαὶ αὐτὸν ἀρετῆς = of his virtue before ascending the throne.

Several such specifications may be put either together under one article, as

Μέμνησθε τῆς ἐν Σαλαμῖνι πρὸς τὸν Πέρσην ναυμαχίας,

or separately with an article to each, as

Μέμνησθε τῆς ἐν Σαλαμῖνι τῆς πρὸς τὸν Πέρσην ναυμαχίας =

* Without the article the adjective, whether before or after the substantive, is strictly attributive, as μέγας φόβος, or φόβος μέγας = 'great fear'; but the adjective is more emphatic when placed first.

Remember the naval engagement at *Salamis against the Persians.**

Very rarely, one of the specifications follows the principal noun without the article being repeated with it, as (Thuc. I. 18. 1.)

μετὰ τὴν τῶν τυράννων κατάλυσιν ἐκ τῆς Ἑλλάδος =
after the destruction of the tyrants out of Greece.

b. Another, and especially in Attic rarer attributive formula, which emphasizes the adjective, is *appositive* in form,

ὁ ἀνὴρ ὁ ἀγαθός = der Mann, der gute.

In this formula, the article before the noun is often omitted, as in the case of proper names (§. 5. Obs. 2.), especially when the subjoined specification consists of more than a single word, as (Thuc. II. 71. 3.)

ἀρετῆς ἔνεκα καὶ προθυμίας τῆς ἐν ἐκείνοις τοῖς κινδύνοις γενομένης =

on account of the valour and zeal displayed in those dangers.

Obs. **The Article with Nouns in Regimen.** a. The formulae are

ἡ τοῦ πατρὸς οἰκία (most common)

ἡ οἰκία τοῦ πατρός (common)

ἡ οἰκία ἡ τοῦ πατρός (rare)

τοῦ πατρός ἡ οἰκία (very rare).

The genitive of the noun is attributive in its nature (§. 21. a.); accordingly, the first and third of these formulae coincide with those for adjectives (§. 8.). The last two, particularly the last of all, emphasize the genitive. In poetry, the article is often used with the genitive only; but in prose, when the genitive has the article, so has the principal substantive, unless indeed one of the two substantives is to be emphasized, in which case that one alone takes the article. Note particularly the genitive of a district with the name of a particular point in it, as (Thuc. I. 111. 1.)

Ἀθηναῖοι ἐστράτευσαν τῆς Θεσσαλίας ἐπὶ Φάρσαλον =
Athenians made an expedition to Pharsalus in Thessaly.

* The Latin language, not possessing a definite article, does not allow prepositional phrases to be connected with nouns without the aid of an adjective or participle: *ἡ ἐν Σαλαμῖνι μάχη* = *pugna Salamina*; or *pugna ad Salamina facta*.

The genitive of the well-known district, by which the spot is defined, has always the article, the spot itself never.

Between the principal substantive and its article, other words besides genitives may stand with the article, which may thus come to be repeated several times in succession, as

ἡ τῶν τὰς ιῆς πόλεως πράγματα πραττόντων ἀρετή —
the virtue of those who manage the state.

b. The article representing an omitted governing noun precedes the genitive case, as

ἡ ἐμὴ οἰκία καὶ ἡ τοῦ ἀδελφοῦ —
my house and *that* of my brother.

The nouns *παῖς*, *χώρα*, *όδός*, even when they have not occurred in the preceding context, are commonly represented by the article, so that

ὁ τοῦ Φιλίππου = Philip's *son*,
εἰς τὴν τοῦ Φιλίππου = into Philip's *country*,
ἥκει τὴν διὰ τῶν ὁρῶν = he took the *path* through the mountains.

c. If the governed noun is represented by a pronoun, the formulae are

<i>Demonstratives</i> (§. 27.) and <i>Reflexives</i> (§. 25.)	<i>Personal Pronouns</i> (§. 24.)	<i>Interrogatives</i> and <i>Relatives</i> .
ὁ ἔαντον πατηρ	οὐ πατήρ μου	
ὁ πατήρ ἔαντον	μοῦ ὁ πατήρ	οὐ ὁ πατήρ.
ὁ πατήρ ὁ ἔαντον		

§. 9. **The Article distinguishing Subject from Predicate.** In clauses formed by appositive verbs, though both subject and predicate may have the article, as (Herod. V. 77.)

οἱ δ' ἵπποβόται ἐκαλέοντο οἱ παχεῖς =
and the rich were called the horse-breeders,
or want it, as (Plat. Theaet. 8.)

πάντων χρημάτων μέτρον ἀνθρώπος =
man is the standard of all things;
though sometimes even the predicate has the article,
and the subject not, as (Philem.)

εἰρήνη ἔστι τάγαθόν = peace is the blessing, the *summum bonum*,

yet generally, the subject takes the article, the predicate not, as

βασιλεὺς ἐγένετο τὸν πτωχάριον =
the beggar became a king,

(John I. 1.) Θεὸς ἦν ὁ Λόγος = the Word was God.
 Adjectives as well as nouns in the predicate want the article, even when the adjective is in the superlative relative, for the expression of which in English the article is indispensable, as (Thuc. I. 1.)
 κίνησις γὰρ αὕτη μεγίστη δὴ τοῖς Ἑλλησιν ἐγένετο =
 for this was indeed *the greatest* commotion among the Greeks.

Obs. 1. **Kinds of Predicates.** According as the predicating verb is appositive (§. 62.) and intransitive; or appositive and passive; or not appositive at all, but transitive, predicates have been classified (Donaldson §. 404.) as primary, secondary, and tertiary. These three kinds of predicate exist in English as in Greek; and in the following examples, the attributive formula is also given, to show that the position of the adjective varies in Greek no otherwise than in English; the adjective standing between the article and the noun when it is the attribute of the noun, and beside the verb when with the verb it makes up the predicate.

Primary	{ ή πέτρα μαλακή ἔστιν ἐνταῦθα =
Predicate	the stone is soft here,
Attribute	{ ή μαλακή πέτρα ἔστιν ἐνταῦθα =
	the soft stone is here.
Secondary	{ οἱ βόες τίμιοι ἐπωλήθησαν =
Predicate	the cattle were sold dear,
Attribute	{ οἱ τίμιοι βόες ἐπωλήθησαν =
	the dear cattle were sold.
Tertiary	{ ὁρῶ τὰ ὄρη λευκά =
Predicate	I see the mountains white,*
Attribute	{ ὁρῶ τὰ λευκὰ ὄρη =
	I see the white mountains.

In English, as in Greek, the attributive formula marks a distinction of persons or things; whereas the predicative formula marks a distinction of conditions in the same person or thing.

a. The same English adjective does not always translate the same Greek one used predicatively, and used attributively:

Predicative, μόνος ὁ παις παιζει = the child plays *alone* (*situs*),
 Attributive, ὁ μόνος παις παιζει = the *only* child plays (*unicus*).

b. Examples of the Greek tertiary predicate which cannot be imitated in English are those descriptive clauses in which something is assumed as belonging to the subject, and a quality is then predicated of that something:

* As may be seen lower down (c), the adjective in the predicative formula may either precede or follow the article and noun.

ἔχει ὁξὺν τὸν πέλεκυν — he has a sharp axe,
ἔχει τὸ στόμα μέγα — he has a big mouth.

In English, not only is the position of the adjective attributive, but the indefinite article represents *ὁ* *ἡ* *τό*. The French however say 'Il a la bouche grande'.

c. In the primary predicate, the copula may be omitted without affecting the sense, as

οἱ λόγοι ψευδεῖς { *ψευδεῖς οἱ λόγοι* { = the words are false.

But *οἱ ψευδεῖς λόγοι* — 'the false words'. The omission of the copula is more common in the third person than in the first or second, particularly in maxims and proverbs, and in the initial clause of a sentence after the nouns *ἄναγκη*, *χρεῶν*, *θέμις*, *εἰκός*, the adjectives *ἔτοιμος*, *πρόθυμος*, *φρούδος*, *ἄξιος*, *δυνατός*, *αἰτιός*, *φάδιον*, *χαλεπόν*, verbals in *τέος* especially when neuter, and *οἶον τε*, *θαυμαστὸν ὄσον*, *αμήχανον ὄσον*, also in relative sentences with *οὐδεῖς*, as *οὐδεῖς ὁς* = 'there is no one who', and sometimes in dependent sentences, as (Il. III. 106.)

ἐπεὶ οἱ παιδεῖς υπερφίαλοι — because his sons are perfidious.

Obs. 2. Primary Predicative Formula Declinable. When the collocation of the primary predicate is preserved, and the finite copula is not only not expressed, but not even understood, a really participial clause (§. 1. Obs. 5.) is obtained, the present participle of *εἰμί* being understood. Here again appears the great importance in Greek of the distinction between the attributive formula and the predicative.

Attributive *ὁ φιλόπατρος ἀνὴρ* = the patriotic man,

Predicative *Ἰός ἀνὴρ φιλόπατρος (ῶν)* { the man *when, because*
φιλόπατρος (ῶν) ὁ ἀνὴρ { *if (he is) patriotic.*

Here, as before, the attributive formula marks a distinction between man and man; the predicative, a distinction of conditions in the same man. This predicative formula preserves its predicative force in all cases.

Attributive	{ (ο) <i>Κῦρος ὁ βασιλεύων</i> =
Nom.	<i>Cyrus the king,</i>
Predicative	<i>βασιλεύων ὁ Κῦρος</i> =
	<i>Cyrus when he was king.</i>
Attributive	<i>ὑπὸ τῶν εὐτυχησάντων βαρβάρων</i> =
Gen.	<i>by those barbarians who have succeeded,</i>
Predicative	<i>ὑπὸ τῶν βαρβάρων εὐτυχησάντων</i> =
	<i>by the barbarians now that they have succeeded.</i>
Attributive	<i>ηδομαι ἐπὶ τοῖς πλούσιοις πολίταις</i> =
Dat.	<i>I rejoice over those citizens who are wealthy,</i>
Predicative	<i>ηδομαι ἐπὶ πλούσιοις τοῖς πολίταις</i> =
	<i>I rejoice over the citizens in that they are wealthy.</i>

Attributive { *ἐνέπρησαν τὰς ἐρήμους σκηνάς* =
 Acc. { they set on fire those tents which were deserted,
 Predicative { *ἐνέπρησαν τὰς σκηνὰς ἐρήμους* =
 they set on fire the tents deserted as they were.

Obs. 3. **Idiomatic use of the Declinable Predicative Formula.** The participial form of the primary predicate is appropriately used with adjectives denoting position when *one part of a thing* is to be distinguished from *another part of the same*, as

ἐσχατον τὸ ὄρος = the utmost part of the mountain,
ἄκραις τοῖς ποσίν = with the end-part of the feet i. e. on
 tiptoe,
παρ' αὐτὴν τὴν χύτραν ἄκραν = along the very end-part,
 i. e. edge, of the pot.

Here again, the attributive and predicative collocations bear their peculiar meanings respectively, as

(Attributive) *ἡ μέση ἀγορά* = the middle market-place,

(Predicative) *ἡ ἀγορὰ μέση* = the middle of the market-place.

In Latin, which has no article, *medium forum* is ambiguous, meaning either the middle part of some market-place, or a market-place situated between other two.

SUBSTANTIVES.

The noun or substantive denotes an entity, real or ideal.

§. 10. Number of the Substantive. The dual, which existed in Sanscrit and Gothic, and in the Anglo-Saxon personal pronouns, as well as in Greek, and survives in the Lithuanian and Icelandic dialects, is an old plural (§. 11 *. §. 24 *b.). Accordingly, not only is the Greek dual not now in use; but neither in the New Testament, nor in Hellenistic Greek is it found. It properly denotes not a couple, but a pair i. e. two connected by some correspondence or cooperation, as the hands; but it may denote any number of individuals, provided their division into pairs be implied.

Obs. 1. Plural for Singular. In Greek as in English, a writer may speak of himself in the plural number; and in Greek poetry, by an exaggeration of the *usus ethicus*, which finds politeness in indirectness of speech*, single persons and things are addressed

* On this principle diversely worked out depend the polite formulae for addressing a single person in the modern languages.

and spoken of in the plural. On the same principle, when in tragedy a woman speaks of herself in the plural, she uses the masculine gender as being the more generic.

(Soph. Ph. 1335.) *ξὺν τοῖσδε τόξοις* for *ξὺν τῷδε τόξῳ*.

(Eur. Hec. 403.) *τοκεῦσιν* for *μητρὶ*.

Neuter plurals are very commonly used with a singular reference, as
τὰ φίλτατα = *deliciae* = darling.

Obs. 2. Plural of Proper, Abstract, and Material Nouns.

a. As we say 'Shakespeares', so the Greeks said

of *Δημοσθένεις* = orators like Demosthenes.

b. As we say 'kindnesses' i. e. acts or instances of kindness, so the Greeks, but far more extensively and boldly, used the plural of abstract nouns for acts or instances of that which the abstract noun denoted, as

ἱπποσύνης ἐκέναστο = he was distinguished for (feats of) horsemanship,

ἀφραδίησι νόοιο = in senselessness of mind, as if 'repeated acts of senselessness'.

αἷματα = deeds of blood, *εὐνοιαί* = marks of favour,
ἀνδρίαι = deeds of valour, *μανίαι* = fits of madness.

c. The plural of material nouns denotes sometimes kinds, sometimes abundance of the thing in question, as

οἶνοι = *vina* = wines, *πυροί* = lots of wheat.

Obs. 3. Number of the Descriptive Accusative. (§. 16. d.)

When the descriptive accusative refers to several persons or things, it is more commonly plural than singular.

<i>κακοὶ τὰς ψυχάς</i>	{	bad at their hearts,
<i>κακοὶ τὴν ψυχὴν</i>		bad at heart,

bad at the heart.

§. 11. Cases of the Substantive. Originally, *πτῶσις* = 'case' was applied only to those forms of the noun which naturally lean, or, as we now say, depend on some other word; but when it came to be applied also to the nominative and vocative, these, as not leaning or depend-

(English) { What do you want? { 2d. pers. plural.

Que voulez-vous?

(French) { Monsieur, que veut-il? { 3d. pers. singular.

Madame, que veut-elle?

(Italian) { Che vuol *Ella*? { 3d. pers. sing. feminine.

Ella standing for *Vossignoria* = 'your Lordship or Ladyship'.

(German) Was wollen Sie? 3d. pers. plural.

ing on any other word, were called ὁρθαὶ πτώσεις = 'upright cases', and the others, as leaning in their attitude, were called πλάγιαι πτώσεις = 'oblique cases'.*

* The origin of the Greek cases is matter of speculation. The following theory, chiefly taken from Crosby (§§. 83—91.), exhibits at any rate a highly rememberable view of details philologically important.

1st. Stage. No distinction of number or case.

λχθν, *γνπ* = primitive stems.

2^d. Stage. Distinction of plural from singular by annexing *ε* to the stem.

Sing. *λχθν*, *γνπ*. Plur. *λχθνε*, *γνπε*.

3^d. Stage. Distinction in each number between direct and indirect relations by annexing *ι* to the stem, and adding *ν* to the plural, this *ν* being the same ancient sign of the plural which survives in children, oxen.

Direct Case. Sing. *λχθν*, *γνπ*. Plur. *λχθνε*, *γνπε*.

Indirect Case. Sing. *λχθνι*, *γνπι*. Plur. *λχθνιν*, *γνπιν*.

4th. Stage. Distinction between subject and object. The plural forms obtained in the 3^d. stage have survived in the dual; and it is noteworthy that in this ancient plural, the Nominative and Accusative coincide, as do also the Genitive and Dative. Accordingly, in the 4th. stage of development, the Nominative and Accusative are obtained from the Direct Case, the Genitive and Dative from the Indirect Case. The Direct Case produced the Nominative by assuming final *ς*, while the Accusative plural was obtained by annexing *νς* to the stem, the *ν* passing in both numbers into its euphonic vowel-substitute, *α*, as in

μέλανς (*μέλαας*) *μέλας* *τιθενσι* *τιθέασι*

ῖστανοι (*ῖστάασι*) *ῖστᾶσι* *δείκνυνσι* *δεικνύασι*

so as to give, instead of the impossible forms *γνπν*, *γνπνς*,

Acc. Sing. *γνπα*, Acc. Plur. *γνπας*.

The development of the Nominative and Accusative from one Direct Case is confirmed by the fact that in neuter nouns, in which the distinction between subject and object is comparatively unimportant, these two cases never acquired separate forms, but continued to be expressed by the stem in the third declension, and in the second by the stem with *ν* appended, which *ν* may have been either euphonic, or objective, attaching itself on the latter supposition to the Nominative also to mark the objective character of the neuter gender. A farther confirmation is that in the first declension, where there are no neuters contrasting with the nouns of nobler gender, feminine nouns

a. The relations of *place*, as being the simplest and most obvious, were probably the first observed and expressed; and to the principal of these the three Greek cases, in most of their applications, correspond;

did not assume the *subjective* *ς* in the Nominative, like the masculine nouns, but contented themselves with assuming the *objective* *ν* in the Accusative.

The singular form of the Indirect Case became the Dative singular; but, the Dative Plural was formed from the newly obtained Nominative plural by adding *ι*, so that from *ἰχθύες* was formed *ἰχθύεσι* = *ἰχθύσι*. The Genitive seems to have been obtained from the primitive stem by adding *-οθ* for the singular, *-οθν* for the plural, additions which recall the now adverbial termination *-θεν* = 'from what place', as *οἴκοθεν* = 'from home'. Homer indeed uses *-θεν* as a genitival ending, witness *ἐξ Αἰσύμηνθεν*, *ἀπ' οὐρανοθεν*, and even Attic poets use *ἐμέθεν*, *σέθεν*, *έθεν* as genitives. By common euphonic changes, *-οθ* became *-ος*, *-ο*, and in the plural, *-οθν* became *-ων*.

The adverbial termination *-θι* = 'at what place', which one is greatly tempted to connect with the *ι* characteristic of the Greek Dative, is used by Homer as a genitive ending, witness *οὐρανόθι πρό*. And should it be contended that both *οὐρανόθι* and *πρό* are adverbs (§. 51.) here, it will still remain to be urged that the kindred *-φι*, which appears in the Latin Datives *tibi*, *sibi*, *nobis*, *vobis*, *deabus*, *sermonibus*, *rebus*, and in the Latin adverbs of place *ibi*, *ubi*, *alibi*, is used extensively by Homer as an ending for the genitive and dative of both numbers.

ἐξ εὑνῆφι, = *ἐξ εὑνῆς*, *ἀπ' ὁστεόφιν* = *ἀπ' ὁστέων*,
παρ' αὐτόφι = *παρ' αὐτῷ*, *σὺν ὄχεσφι* = *σὺν ὄχεσι*.

The use of *-φι* as ending for the Genitive and Dative indifferently is a confirmation of the theory that these case-forms have a common origin; though the etymological connection between the Genitive and the old Indirect Case does not appear.

The final development of the case-forms after, though not always out of, the 3^d. stage, may be thus represented.

Singular.

Direct Case	<i>ἰχθύ</i> , <i>γύν</i>	<i>{ adding -ς. Nom. ἰχθύς, γύνις.</i>
		<i>{ adding -να. Acc. ἰχθύν, γύνα.</i>
Indirect Case	<i>ἰχθύι</i> , <i>γυνί</i>	<i>{ adding -ος to the stem. Gen. ἰχθύος, γυνώς.</i>
		<i>{ adopting the Indirect Case. Dat. ἰχθύι, γυνί.</i>

the Genitive denoting *from* what place,
 the Dative - *at* what place,
 the Accusative - *to* what place.

Accordingly, these cases are capable of expressing the above relations of place without the aid of prepositions; and these relations of place are precisely those brought out by the prepositions construed with each case exclusively: *ἐξ* and *ἀπό* bring out the *from* relation of the genitive, *εἰς* the *to* relation of the accusative, and *ἐν* the *at* relation of the dative. A beautiful illustration of the

Plural.		
Direct Case	$\left\{ \begin{array}{l} \text{λ} \chi \theta \nu \epsilon, \gamma \nu \pi \epsilon \\ \text{λ} \chi \theta \nu \epsilon, \gamma \nu \pi \epsilon \end{array} \right.$	$\left\{ \begin{array}{l} \text{adding } -\varsigma. \quad \text{Nom. } \text{λ} \chi \theta \nu \epsilon \varsigma, \gamma \nu \pi \epsilon \varsigma. \\ \text{adding } -\alpha \varsigma \text{ to } \\ \text{the stem. } \quad \text{Acc. } \text{λ} \chi \theta \nu \alpha \varsigma, \gamma \nu \pi \alpha \varsigma. \\ \text{adding } -\omega \nu \text{ to } \\ \text{the stem. } \quad \text{Gen. } \text{λ} \chi \theta \nu \omega \nu, \gamma \nu \pi \omega \nu. \\ \text{deriving a new form from } \\ \text{the Nom. Pl. } \quad \text{Dat. } \text{λ} \chi \theta \nu \sigma \iota, \gamma \nu \pi \sigma \iota. \end{array} \right.$
Indirect Case	$\left\{ \begin{array}{l} \text{λ} \chi \theta \nu \iota \nu, \gamma \nu \pi \iota \nu \\ \text{λ} \chi \theta \nu \iota \nu, \gamma \nu \pi \iota \nu \end{array} \right.$	

The above examples belong to the third declension, which comprises all stems ending in a consonant or in the vowels *-v*, *-i*. To the second declension belong the stems in *-o*, and to the first those in *-α*, *-η*. The development of case-forms in the second and first declensions follows:

Sing. Nom.	$\lambda \circ \gamma \circ - \varsigma = \lambda \circ \gamma \circ \varsigma$	$\tau \alpha \mu \acute{\iota} \alpha - \varsigma = \tau \alpha \mu \acute{\iota} \alpha \varsigma$
Gen.	$\lambda \circ \gamma \circ - o = \lambda \circ \gamma \circ o$	$\tau \alpha \mu \acute{\iota} \alpha - o = \tau \alpha \mu \acute{\iota} \alpha o$
Dat.	$\lambda \circ \gamma \circ - i = \lambda \circ \gamma \circ i$	$\tau \alpha \mu \acute{\iota} \alpha - i = \tau \alpha \mu \acute{\iota} \alpha i$
Acc.	$\lambda \circ \gamma \circ - \nu = \lambda \circ \gamma \circ \nu$	$\tau \alpha \mu \acute{\iota} \alpha - \nu = \tau \alpha \mu \acute{\iota} \alpha \nu$
Voc.	$\lambda \circ \gamma \circ = \lambda \circ \gamma \circ e$	$\tau \alpha \mu \acute{\iota} \alpha = \tau \alpha \mu \acute{\iota} \alpha e$
Dual. N. A. V.	$\lambda \circ \gamma \circ - \epsilon = \lambda \circ \gamma \circ \epsilon$	$\tau \alpha \mu \acute{\iota} \alpha - \epsilon = \tau \alpha \mu \acute{\iota} \alpha \epsilon$
G. D.	$\lambda \circ \gamma \circ - \iota \nu = \lambda \circ \gamma \circ \iota \nu$	$\tau \alpha \mu \acute{\iota} \alpha - \iota \nu = \tau \alpha \mu \acute{\iota} \alpha \iota \nu$
Plural N. V.	$\lambda \circ \gamma \circ - i = \lambda \circ \gamma \circ i$	$\tau \alpha \mu \acute{\iota} \alpha - i = \tau \alpha \mu \acute{\iota} \alpha i$
Gen.	$\lambda \circ \gamma \circ - \omega \nu = \lambda \circ \gamma \circ \omega \nu$	$\tau \alpha \mu \acute{\iota} \alpha - \omega \nu = \tau \alpha \mu \acute{\iota} \alpha \omega \nu$
Dat.	$\lambda \circ \gamma \circ - \epsilon \sigma \iota = \lambda \circ \gamma \circ \epsilon \sigma \iota$	$\tau \alpha \mu \acute{\iota} \alpha - \epsilon \sigma \iota = \tau \alpha \mu \acute{\iota} \alpha \epsilon \sigma \iota$
		$- \alpha \iota \varsigma$
Acc.	$\lambda \circ \gamma \circ - \alpha \varsigma = \lambda \circ \gamma \circ \alpha \varsigma$	$\tau \alpha \mu \acute{\iota} \alpha - \alpha \varsigma = \tau \alpha \mu \acute{\iota} \alpha \alpha \varsigma$

The vocative never had a separate case-form, and either appears as the stem, the final vowel of which is modified in the second declension, or coincides with the case-form of the nominative.

The *α* in the N. A. V. plural of neuters represents the old *ε*, and, being the euphonic vowel-substitute of *ν*, it marks appropriately the objective character of the neuter gender.

primary local force of the Greek cases is furnished by the triple construction of *παρά*, the radical meaning of which is *beside*: thus

παρὰ τοῦ βασιλέως = *from* beside the king,
παρὰ τῷ βασιλεῖ = *at* beside the king.
παρὰ τὸν βασιλέα = *to* beside the king.

b. Since there are many local relations besides those of *from*, *to*, and *at*; and since the relations of place are naturally transferred to those of time and causality, it is evident that the case-endings, on being consolidated into a determinate system, must have denoted a great variety of new derived relations (§. 14. Obs. 2.), and that prepositions would be more than ever wanted to define their meaning. Farther, duplicates for the same relation are sometimes derived from different primary relations, so that different case-endings, each with its appropriate preposition, sometimes coincide in meaning; and this holds in English as in Greek. Thus, an object may be situated in regard to some other

ἐξ ἀριστερᾶς }
ἐν ἀριστερᾷ } = { on the left,
ἐπ' ἀριστερᾷ } = { at the left,
ἐπὶ ἀριστερῆν } = { to the left.

The manifold force of the case-endings, and the manifold force of the prepositions affecting them respectively illustrate one another.

Obs. The Cases in Sanscrit. It militates somewhat against the historical accuracy of the theory exhibited in the note to §. 11, that the mother-tongue of the Indo-European languages possessed no fewer than eight cases. That theory is constructed by reasoning upwards through the Greek that has come down to us. By reasoning downwards from Sanscrit, it would rather seem that instead of proceeding on the distinctions of *direct* and *indirect*, of *subject* and *object*, men added significant syllables to nouns, for the purpose of denoting relations, just as these relations presented themselves and solicited expression, which additions were gradually consolidated into a case-system more or less extended in different dialects. The Sanscrit case-system shews that several relations, which once had distinct lingual forms, came to be comprehended under one in both

Greek and Latin. The grammarian is thus warned to seek the rationale of case-usage, not always in the development of one radical relation, known to be involved in a case-ending, or clearly expressed by a characteristic preposition, but sometimes also in the coalescing of kindred forms originally expressive of distinct relations. How far, and in what combinations the Sanscrit cases have coalesced in the Greek and Latin respectively, is shewn by the following table:*

Sanscrit. 8.	Latin. 6.	Greek. 5.
Nominative	Nominative	Nominative
Genitive	Genitive	Genitive, Ablative
Dative	Dative	Dative, Instrumental,
Accusative	Accusative	Locative.
Vocative	Vocative	Accusative
Ablative	Ablative, Instrumental,	Vocative.
Instrumental	Locative.	
Locative.		

§. 12. **Radical Force of the Genitive.** According to the above table, the Greek *genitive* is also *ablative*. In the absence of all trace of a separate *ablative* form having ever existed in Greek, this coincidence is sufficiently accounted for by the fact that the *of* and *from* relations are in their own nature intimately connected. Assume, the original force of the Greek genitive to have been *from*, the separation expressed by *from* implies previous connection, i. e. implies the relation expressed by *of*. Accordingly in English, rain, which falls *from* heaven, is also, and for that reason, rain *of* heaven &c.; and in some languages, the *of* and *from* relations are confounded in one word, as in the French *de*, and the German *von*. In Greek, they are not uniformly distinguished by separate prepositions; for though $\epsilon\xi$ and $\alpha\pi\acute{o}$ are distinguishable as *out of* and *from*, so kindred are these meanings that $\epsilon\xi$ and $\alpha\pi\acute{o}$ are often interchanged, as

* In this table the case-names are used, not in their conventional sense, which varies with every language, according to the development of the case-system in each; but in their strict etymological sense.

(I. John. 2. 19.) $\epsilon\xi\eta\mu\omega\nu\epsilon\xi\eta\lambda\theta\omega\nu, \alpha\lambda\lambda' o\bar{u}\kappa\eta\sigma\omega\nu\epsilon\xi\eta\mu\omega\nu =$
they went out *from* us, but they were
not *of* us,

$o\bar{i}\alpha\pi\bar{o}\tau\eta\sigma\sigma\omega\bar{s}$ } $o\bar{i}\epsilon\kappa\tau\eta\sigma\sigma\omega\bar{s}$ } = they of the porch i. e. the Stoicks.

§. 13. Development of the Genitive. *a.* The *of* relation accounts for the following kinds of Genitive,
Possessive, as $\epsilon\alpha\omega\tau\omega\bar{u}\epsilon\bar{i}\nu\omega\bar{u}$ = to be one's own (master),
Material, as { $\epsilon\kappa\pi\omega\mu\omega\xi\bar{u}\lambda\omega\bar{u}$ = a cup (made) of wood,
 { $\delta\epsilon\pi\omega\sigma\omega\bar{u}\bar{o}\bar{i}\nu\omega\bar{u}$ = a cup (full) of wine,
Partitive, as { $\epsilon\sigma\theta\iota\epsilon\omega\bar{u}\bar{\kappa}\rho\omega\bar{u}$ = he eats (some) meat,
 { $\pi\omega\lambda\lambda\omega\bar{u}\tau\omega\bar{u}\bar{E}\bar{\lambda}\bar{\lambda}\bar{\eta}\nu\omega\bar{u}$ = many of the Greeks.

b. The *from* relation accounts for the following kinds of Genitive,

Privative	as $\epsilon\lambda\epsilon\bar{u}\bar{\theta}\epsilon\mu\omega\bar{u}\bar{\varphi}\bar{\theta}\bar{\beta}\omega\bar{u}$ = free <i>from</i> fear.
Local	See below Obs. 1.
Temporal	- - 2.
Causal	- - 3.
Comparative	- - 4.

Obs. 1. Local Genitive. *a.* Unless the suffix $-\theta\epsilon\nu$ be regarded as a genitival ending, the Greek genitive is not found, without a preposition ($\epsilon\xi$, $\alpha\pi\bar{o}$), expressing the local *whence*; but as the *whence* adverbs in $-\theta\epsilon\nu$ are often used for the *where* adverbs in $-\theta\iota$, $\bar{\alpha}\nu\theta\epsilon\nu$ for $\bar{\alpha}\nu\theta\iota$ † and the like, so the Greek genitive often denotes without a preposition the local *where*, or rather the local *whereabouts*. Hence the genitival adverbs

$\pi\omega\bar{u}$; = where? $\alpha\bar{u}\tau\omega\bar{u}$ = just here, just there.

The transition of the *whence* into the *where* relation in Greek is not stranger than that of the *where* into the *whither* relation in Greek and English alike; and it may be thus illustrated. If an object move away *from* my right, its direction is given, and I know

* Compare the French, 'il mange *de la* viande.'

† So the Italian *di* = 'of', and *da* = 'from' both denote position *where*, as

<i>di qua</i>	{	<i>del ponte</i> = <i>on this</i>	{	(side) of the bridge,
<i>di la</i>	{	<i>on that</i>	{	
<i>da lungi</i>				= <i>at a distance</i> ,
<i>da me</i>				= <i>at my house</i> .

that it is now somewhere *on* my right; accordingly, with or without ξ ,

δεξιᾶς (χειρός) = on the right hand.

Indeed, the local *where*, or rather *whereabouts*, may be indicated both by the direction *whence*, and by the direction *whither*, as

πρὸς νότου = πρὸς νότον = in the south

(*ab oriente* = *versus orientem* = in the east).

Homer indeed marks the *precise where* by the Genitive, as (Od. XXI. 108.)

οὐτε Πύλου ιερῆς, οὐτ' Ἀργεος, οὐτε Μυκήνης =

neither at sacred Pylos, nor at Argos, nor at Mycenae.

But in prose, the Genitive marks not the spot, but the *district where*, or rather *over which*, as (Acts 19. 26.)

οὐ μόνον Ἐφέσου ἀλλὰ σχεδὸν πάσης τῆς Ἀσίας =

not only at Ephesus, but throughout almost all Asia.

The genitive Ἐφέσον is probably due to the following genitive πάσης τῆς Ἀσίας.

In the kind of local designation already (§. 8, Obs. a.) noticed

Θῆβαι τῆς Βοιωτίας = Thebes in Boeotia, the genitive is really dependent on the principal noun **Θῆβαι**.

b. In certain phrases, the local *whereabouts* expressed by the genitive passes after verbs of motion into the general direction *whither*, just as *ποῦ* came to be used for *ποι*, and *where* for *whither*, as

(Xen. An. I. 3. 1.) οἱ γὰρ στρατιῶται οὐκ ἔφασαν, λέναι τοῦ πρόσσω = -

for the soldiers refused to go forward

(Thuc. IV. 60. 2.) *τῆς ἀρχῆς . . . προκοπόντων ἐκείνοις* = furthering their progress to dominion

(Thuc. IV. 47. 3.) furthering their progress to dominion.
ἐπετάχυννον τὴς ὁδοῦ τούς κ. τ. λ. = hastened on their way those etc.

Compare the German phrase *seiner Wege gehen* = 'to walk off'.

Obs. 2. Temporal Genitive. The relations of place are naturally transferred to time, as appears from the frequent interchange of *where* and *when* in English, and from the Latin *ubi* and the Greek ὅποι denoting both *where* and *when*. Accordingly,

a. the genitive denotes the *whence* of time as (Herod. VI. 40.) *τρίτῳ μὲν γὰρ ἔτει τούτῳ Σκύθας ἔφευγεν* = for in the third year *from this* he was fleeing before the Scythians, in which passage the years are counted backwards, so that '*from this*' = '*before this*'; but the years might be counted forwards, and then '*from this*' = '*after this*'. Let the temporal *whence* = *since when*, there emerges the specification *how long*, which accordingly is sometimes expressed by the genitive, as (Aesch. Ag. 285)

sometimes expressed by the genitive, as (Aesch.
ποίου γούρου δὲ καὶ πεπόνθται πόλις : =

how long (since what time) has the city been laid waste?

b. Most commonly, however, the Greek temporal genitive denotes the *where* of time i. e. *when*, but with the same wide reference as has been pointed out in the case of the local genitive, marking not the moment *at* which, or even the particular day *on* which, but the time *in* which, i. e. in the course or lapse of which some event has occurred, as

*τοῦ ξαρος** = *in the spring*,

πολλάκις τοῦ μηνός = *many times a (in the) month*.

This genitive is much used in negative clauses, as

βασιλεὺς οὐ μάχειται δέκα ἡμερῶν =

the Persian (§. 5. Obs. 2. a.) *king will not fight for ten days*.

The French scholar who can distinguish between these two,

pendant l'hiver = *in the winter-time*,

durant l'hiver = *throughout the winter*,

will not fall into the common mistake of considering the time expressed by the Greek genitive in examples like the last as time *how long*.

Obs. 3. **Causal Genitive.** The local *from* relation naturally leads to the causal, because the effect proceeds *from* the cause.

a. In English, *from* denotes only the *antecedent* cause, as '*From* what you say, I think etc.', but in Greek, the genitive denotes both that and the *final* cause or aim, as

σὲ εὐδαιμονίᾳ τῶν λόγων τῆς δυνάμεως =

I congratulate you on the power of your words. (antecedent cause)

ἢ τεν αγγελίης μετ' ἐμοὶ ἡλυθες; (Il. XIII. 252.) =

or hast thou come to me for the sake of, i. e. to make some announcement? (final cause)

b. The genitive of the infinitive with the article is used, particularly in Attic and with negatives, to express not only the *aim*, but also the *result*. How natural it is that the expressions for the *aim* and the *result* should coincide appears from their coincidence in the Greek *οπως* and the Latin *ut*.

οπως = *ut* = { in order that (aim)
 so that (result).

Here are examples from the N. T. †; but, as denoting *aim*, this use of the infinitive is also classical.

* Compare *νυκτός* = *de nocte* = *di notte* = *de nuit* = *nachtis* = *by night*.

† In accordance with a Hebrew idiom, the genitive of the article with the infinitive is frequently used in the Septuagint and New Testament where neither design nor result is expressed, as (Acts XXVII. 1.): 'Ως δὲ ἐκριθη τοῦ ἀποπλεῖν ἡμᾶς = 'And when it was determined that we should sail.' Here how-

(Mark. IV. 3.) ἐξῆλθεν ὁ σπείρων τοῦ σπεῖρα =
the sower went out to sow.

(Rom. VII. 3.) ἐλευθέρα . . . τοῦ μὴ εἶναι αὐτὴν μοιχαλίδα =
free . . . so that she is not an adulteress.

c. The genitive of the *agent* comes under the head of the *causal* genitive, because the agent is the personal cause, as (Soph. Phil. 3.)
κρατίστον πατρὸς Ἑλλήνων τραφεῖς =
reared by the mightiest sire among the Greeks.

The *means* may be personified as the agent, as

μεθυσθεὶς τοῦ νέκταρος = intoxicated with (as if by) nectar.
But the genitive of the agent is most commonly accompanied by
ὑπό, sometimes by πρός, πρό, διά, ἐξ.

d. The genitive of *concern* may be classed with the causal genitive, because the object of concern may be regarded as its cause. This genitive, which is interpreted by περί, is chiefly used with adjectives and verbs denoting mental states or activities, as

ἐμπειροι γὰρ ήσαν τῆς Παφλαγονίας =
for they were acquainted with Paphlagonia.

Obs. 4. Comparative Genitive. The relations of comparison may be paralleled with those of combat: they mark the same facts, viz. superiority, inferiority, equality. And it is noteworthy that the radical force of all the prepositions found with the comparative genitive, ἀντί, πρό, πρός, marks the position of combatants, as if the *from* notion had here passed into that of *in front of*.*

a. The genitive of *superiority* or *inferiority*, interpreted by ἀντί, πρό, finds a constant parallel in Italian, an occasional one in French, as

Αὗτη ἡ οἰκία καλλίστην ἐκείνης ἐστίν =
Questa casa è più bella di quella =
This house is more beautiful than that.
più di cento scudi
plus de cent écus
more than a hundred crowns.

In the following examples, ἀντί and πρό figure as interpreters of this genitive,

Ο γὰρ χρόνος μάθησιν ἀντὶ τοῦ τάχους κρείσσω δίδωσιν =
For leisure gives learning better than haste.

ever τοῦ ἀποπλεῖν might be regarded as the genitive of concern explained below (d), 'And when it was determined concerning our sailing away.'

* Compare the French *après de* = 'in presence of', hence 'in comparison with'; and our own phrase 'This is nothing where that comes', i. e. in presence of that, in comparison with that.

Οἵσιν ή τυραννίς πρὸ ἐλευθερίας ήν αἰσχαστότερον —
To whom tyranny was a more agreeable thing than freedom.

b. The genitive of *equality* or *equivalence*, often interpreted by *ἀντί*, is also called the genitive of *price*, as

πόσον τιμᾶται; — what is it worth?

ἐλάττονος ποιεῖσθαι — to esteem less.

c. The comparative genitive interpreted by *πρός* may be called the genitive of *congruity*, and occurs in such sentences, as

οὐκ ἔστιν ἀνδρὸς καλοῦ καὶ γαθοῦ τοιαῦτα ποιεῖν —

to do such things is not like a gentleman.

This genitive is commonly explained by the supposition of a noun omitted; but the fact that *πρός* was frequently prefixed to it shews that a comparative idea was in the Greek mind. *From before*, the radical force of *πρός* with the genitive, might be introduced in translating the above example 'to do such things is not (what might be expected to come) from before a gentleman'.

§. 14. Radical Force of the Dative. The *at* representing the radical force of the dative implies *conjunction with*, not however in the sense of inherent connection, like the genitival *of*, but in the sense of accidental and temporary juxtaposition. The relations expressed by *whereat*, *wherein*, *wherewith*, *whereby* pass into one another, when transferred from external objects: thus a man's attention can be engrossed *in* a thing, *with* a thing, or *by* a thing, and this interchangeability may have aided in the coalescing of the instrumental and locative cases with the dative in Greek (see Table §. 11. Obs.), supposing that in Greek, as in Sanscrit, there were once separate forms for these. The more numerous the original case-endings, the more nearly must some of them have resembled others, and the more easily would such coalesce on euphonic grounds alone.* The Sanscrit locative in *i*, for instance, might easily coalesce with the Sanscrit dative in *ai*.

* The influence of mere sound on the usage, and even on the existence of cases appears clearly in Romaic. When the imparisyllabic or third declension form of nouns became obsolete, and the difference between the vowels *o* and *ω* in respect of quantity disappeared, nothing distinguished the dative from

§. 15. Development of the Dative. The Dative may be called preeminently the *circumstantial* case, because any circumstance whatever accompanying a transaction may be expressed by it. To the familiar trio, 'cause, manner, and instrument', must be added notably the measure of difference, as

ὑποδεέστερος ὀλίγῳ = little inferior,
ὅσῳ μεῖζον, τοσούτῳ χαλεπώτερον =
the greater the more difficult.

It is however convenient to consider separately the principal kinds of Dative.

a. The local, marking *precisely* place *where*, as
'Αθήνησιν = at Athens.

This dative is sometimes accompanied by ἀνά, μετά in poetry; and almost always in prose by one of the following ἐν, ἀμφὶ, περὶ, ἐπὶ, παρά, πρός, ὑπό.

b. The temporal, marking *precisely* time *when*, as
τῇ τρίτῃ ἡμέρᾳ = on the third day,
τῇ τρίτῃ ὥρᾳ = at the third hour.

Frequently in poetry, and generally in prose ἐν is prefixed to this dative; sometimes ἐπὶ, ἀμα.

c. The instrumental dative affords several illustrations of the remark (§. 11. b.) that the same relation may be denoted by different case-endings. Thus the material *of* which anything is made may be regarded

the accusative but the final *v* of the latter. In mediaeval Greek however that consonant disappeared, just as the corresponding *m*, which even in the Augustan era, witness *ecclipsis*, had ceased to be pronounced, dropped out of mediæval Latin, whence arose the *o* termination of Italian adjectives. When the dative and accusative thus became undistinguishable by the ear in mediæval Greek, the dative, as the less indispensable case of the two, slipped out of use altogether. And although generally the dative so lost was resolved into *εἰς* with the accusative, yet the established habit of using a dative case sought satisfaction in the use of the genitive, particularly of pronouns, in a dative sense. Hence, in Romaic, *τοῦ εἰπα ταῦτα* = 'I told him these things.'

as the instrument, and is accordingly sometimes found in the dative, just as in English we say 'a wall built *with* bricks', as well as 'a wall built *of* bricks'. So the price, when regarded as the instrument of purchase, is put in the dative. Again, the cause may be regarded as the instrument, as

κάμνειν νόσῳ = to labour under a disease.

And this construction is sometimes extended to the personal cause, the agent, particularly when the agent is represented by a pronoun and the verb is in the perfect or pluperfect passive, as

*ταῦτα μοι λέλεκται** = these things have been said by me, *πολλαὶ θεραπεῖαι τοῖς ἰατροῖς εὑρηνται* = many remedies have been found out by the physicians.

Also, always after verbals in *τέος* (§. 70.).

d. The dative of *advantage* or *disadvantage* is a development of the *dativus ethicus*, or dative of *general reference*, which, because of the important part it plays in Greek, is discussed more at large below (Obs.), and may be considered as denoting the *personal where* of the action, as

τι δέ μοι; what is it to me?

Evidently, what is related to me may be either beneficial or injurious.

e. The Dative properly so called, the *transmissive* dative, is a particular case of the same general reference. In

διδόναι τι τινι = to give something to somebody, the dative expresses the personal *where* of the giving. Between *to* and *at* (implied in *where*) there is a marked distinction in English usage, though in some cases, as in the phrases *at the left*, *to the left*, they are equivalent; but the transition from the one to the other is not so

* Compare the French, C'est bien dit *à* vous =
That is well said *by* you.

much as felt in those languages which express both by one preposition, witness the German *zu*, the French *à*, the Latin *ad*, the later Greek *εἰς*.

Obs. **Dativus Ethicus.*** This dative is particularly common with first and second personal pronouns, and circumlocution is often requisite in English to convey its force, as

(Soph. Aj. 1128.) *τῷδε δ' οἴχομαι* =

but I am gone *so far as he is concerned*.

(Aristoph. Ran. 1134.) *ἐγὼ σιωπῶ τῷδε*; =

shall I hold my tongue *to please this fellow?*

More particularly, the *dativus ethicus* is used.

a. In offers of meat and drink, to indicate politely the pleasure which the acceptance of the offer would give to the offerer, as (Hom.)

ἄλλα μοι ἔσθιέμεν ναὶ πινέμεν =

but do, *I pray you, eat and drink.*

b. In certain idiomatic phrases formed of participles or adjectives denoting mental states with the substantive verbs *εἰναι*, *γίγνεσθαι*, implying that something is an object of will, pleasure, hope to the person named in the dative, as

(Il. XIV. 108.) *ἔμοι δέ κεν ἀσμένῳ εἴη* =
to me it would be welcome.

(Thuc. II. 3. 2.) *τῷ γὰρ, πλήθει τῶν Πλαταιῶν οὐ βούλομένῳ ήν τῶν Αθηναίων ἀφίστασθαι* =
for the mass of the Plataeans were not disposed to revolt from the Athenians.

(Xen. Cyr. IV. 5.) *ὅτῳ ὑμῶν μὴ ἀχθομένῳ εἴη* =
to whomsoever of you it might not be burden some.
εἴσοι βούλομένῳ ἔστιν = if you please.

c. In certain phrases almost or quite adverbial, as

ἐπ' ἀριστερᾷ ἐσπλέοντι = to the left *as you sail in.*
συνελόντι, συντεμόντι (εἰπεῖν) = in brief.

* The *dativus ethicus* is frequent in Shakespeare. In Act IV. Scene 4 of the Two Gentlemen of Verona, it occurs twice: "he steps *me* to her trencher" — "he thrusts *me* himself into the company". The modern German retains this idiom with nouns as well as pronouns; but the only phrases in modern English approaching the Greek usage are those in which 'for you' is used in the sense of 'you being judge', or 'I warrant you', which the Germans express, like the Greeks, by the simple dative, as

Das war Ihnen ein Spaß = that was fun *for you*.

Da gab es Euch Spektakel = there was a row *for you*,

§. 16. **Development of the Accusative.** The primary local force of the accusative appears in (Soph. Oed. Col. 643.)

τι δῆτα χρήζεις; η δόμους στείχειν ἐμούς; =
what dost thou wish then? to go to my palace?

But the relation *whither*, developed into *from here to there*, gives the idea of extension; hence the accusative is also used to denote *how far*, as

"Ἐφεσος ἀπέχει ἀπὸ Σάρδεων τριῶν ἡμερῶν δδόν =
Ephesus is distant from Sardes three days' journey.

Place *where* or rather *whereabouts* is sometimes expressed by the Accusative, as by the Genitive (§. 13. Obs. 1. a). (Soph. Oed. R. 1134.) *ἡμος, τὸν Κιθαιρῶνος τόπον* =
when, in the region of Cithaeron.

From the local accusative, the other kinds are easily derived.

a. The *temporal*, denoting time *how long*, is often accompanied by the prepositions *διά*, *ἀνά*, *κατά*, *ὑπό*. Time *when* is also denoted by the Accusative, and that in two ways: first precisely, under the form *how long ago* with ordinal numerals; then vaguely, a space not a point of time being indicated, as if *whenabouts* corresponding to the local whereabouts above-mentioned.

(Aeschin. III. 77.) *ἔβδόμην δ' ἡμέραν τῆς θυγατρὸς αὐτῷ τετελευτηκυίας* =
and his daughter having died *seven days ago*,
παλαιὸν χρόνον = *anciently*.

b. The *quantitative*, denoting *how much*, is often accompanied in exact specifications by *παρά*, and in approximative ones by *εἰς*, *ἐπί*, *ἀμφί*, *περί*, *κατά*, *πρός*. It thus appears that the value of a thing may be put in any one of the three Greek cases; in the genitive, when regarded as a price given in exchange, in the dative when regarded as the instrument of purchase, and in the accusative when regarded simply as a quantity, as

πόσας μνέας δύναται τὸ τάλαντον; ==
how many minae is the talent worth?

c. The *objective* i. e. the accusative denoting the *direct object* of the verb, the direct object being that to which the action denoted by a verb *directly* tends. In

δὸς δύο δραχμὰς τῷ παιδὶ ==
give two drachmæ to the lad,

the act of giving affects first and directly the drachmæ, which therefore are in the *objective* accusative, secondly and indirectly the lad, which is in the transmissive dative (§. 15. e.).

d. The *descriptive* (§. 10. Obs. 3.), also called *accusative of the part affected*, is used after verbs transitive and intransitive, adjectives, and substantives used adjectively.

καλλιστεύει τὰ ὄμματα == she has very beautiful eyes.

πυρίτης τὴν τέχνην == a smith by trade.

This accusative is often explained by *κατά* == 'as to'; and not only *κατά* but *εἰς* and *πρός* also are actually found with it. These prepositions however merely bring out a relation indicated by the accusative alone, viz. the *whereabouts* of some quality or activity. The descriptive accusative gives rise to a multitude of adverbial phrases, as *τὴν ἀρχήν* == at first, *τὴν ταχίστην ὀδόν* == as soon as possible,

τέλος == finally, *ταῦτα* == in these respects.

§. 17. **Summary of Case-Development.** The following table represents at one view the development of the cases, with the prepositions characteristic of their several meanings. These prepositions do not always accompany the cases; and in regard to them, as in regard to the article (§. 5. Obs. 4.), the later the author and the less poetic the style, the more frequently are they used. When no preposition stands opposite a case-development, it is because no preposition is used with that case-development in classic Greek.

Genitive (whence):

Possessive	
Material	ἐξ, ἀπό
Privative	
Partitive	ἐξ, ἀπό
Local	ἐξ, ἀπό, διά
Temporal	ἐξ, ἀπό, διά
Causal	ἐξ, ἀπό, διά, ὑπό, περί
Comparative	πρό, ἀντί, πρός

Dative (where):

Local	ἐν, ἐπί, περί, παρά, πρός, ὑπό, ἀμφί, and in poetry ἀνα, μετα
Temporal	ἐν, ἐπί, ἀμφά
Instrumental	
Ethicus	

Accusative (whither):

Local	εἰς
Temporal	διά, ἀνά, κατά, ὑπό
Quantitative	παρά, εἰς, ἐπί, περί, κατά, πρός
Objective	
Descriptive	κατά, πρός, εἰς.

§. 18. **Rhetorical Use of Substantives.** In various ways more or less striking, the orator and poet merely suggest what in ordinary discourse is said plainly out. Languages differ much in the extent to which rhetorical usage is carried; but the modes of it are common to all.

a. The part is often* put for the whole, as

ἀκτίς = ray, for *light* or *the sun*.

στάχυς = ear of corn, for *harvest*.

b. Very rarely, the whole is put for the part, as

βοῦς = ox, for *ox-hide*.

c. The abstract is put for the concrete, as

δλεθρος = destruction, for *destroyer*.

τὸ κρατοῦν = die *Obrigkeit* = *the authorities*.

d. The producer is put for the produce, as

μέλισσα = bee, for *honey*.

* Even in ordinary discourse, as

ἡ ἀσπίς = the shield, for ὁ πλιταῖ = the heavy-armed,

ἡ ἵππος = the horse, in the sense of 'cavalry',

ὁ Πέρσης = the Persian, for 'the Persians'.

e. The name of a thing is put for the place with which it is most associated, as

ἀγών = game, for *the circus*,

σιδηρος = iron, for *the iron-mart*.

f. The name of a place is put for the persons occupying it, as θέατρον = theatre, for *the spectators*.

§. 19. Substantives used Adjectively. a. Some substantives convey an adjectival meaning, because what they express is, or ought to be preeminent for certain qualities. Hence some of them are even compared, as βασιλεύς = king, βασιλεύτερος more a king, more kingly.

b. In poetry, the attribute of a person is often expressed by an abstract substantive, the name of the person being in the genitive, as

Ποσειδῶνος κράτος =

Neptune's might i. e. mighty Neptune.*

Our own phrases, 'Your Majesty', 'Your Grace' &c. are formed in the same way, but they belong only to the style of etiquette, and illustrate the *usus ethicus*, which finds politeness in indirectness of speech.

c. By a still bolder figure, the noun may represent even a participle, as (Soph. Oed. Col. 1069.)

πᾶσα δὲ... πώλων ἀμβασις =

and all who were mounted on steeds,
as if πώλων ἀμβασις = πώλους ἀναβάντες.

§. 20. Significant Terminations. a. In the case of nouns derived from verbs, the *action* denoted by the verb is implied in the terminations

-σις, as ποίη-σις = the action of ποιέω = poesy,

-σία, - θν-σία = - - - - θύω = sacrifice,

* Compare with this the following New Testament expressions, where also the *principal* substantive is in the genitive.

(I. Tim. VI. 17) ἐπὶ πλούτου ἀδηλότητι =

in deceitfulness of riches i. e. in deceitful riches,

(Rom. VI. 4) ἐν νεανότητι ζωῆς =

in newness of life i. e. in a new life.

-μίς, as ὀδυρ-μός = the action of ὀδύρ-ομαι = lamentation,
 -μη, as μνή-μη = the action of μέ-μνη-μαι = remembrance.

The *thing done*, the effect of the action, is implied in the termination

-μα, as ποίημα = the effect of ποιέω = poem.

The *doer* is implied in the terminations

-τής, as ποιη-τής = he who ποιεῖ = poet,
-τήρ, - σω-τήρ = - - σωζει = saviour,
-τωρ, - φή-τωρ = - - (φεῖ) = speaker,
-εύς, - γραφ-εύς = - - γράφει = painter.

The *place where a thing is done* is implied in the termination

-τήριον, as δικασ-τήριον = where δικάζ-εται = court of justice.

The *instrument* with which a thing is done is implied in the termination

-τρον, as ξύστρον = wherewith ξύ-εται = curry-comb.

b. In the case of nouns derived from adjectives, the *abstract idea* is implied in the terminations

-ία, as from σοφ-ός, σοφία = wisdom,
-εια, - αληθ-ής (ε-ες), αληθεια = truth,
-οια, - εύνο-ος, εύνοια = kindness,
-της (3 ^{d.} decl.) - ἴσ-ος, ισότης = equality,
-σύνη, as δίκαιο-ος, δίκαιοσύνη = justice.

c. Diminutives end in -ιον and ισκος, and often combine other syllables with these terminations, as exemplified in the subjoined diminutives of παις = 'child'.

παιδίον	παιδαρίδιον	παιδίσκος	παιδισκάριον
παιδάριον	παιδαρύλλιον	παιδαρίσκος.	

d. A sort of collective noun is formed in -ών, but most frequently it denotes the *place* where some living creature is to be found in *numbers*, or some article in *quantities*, as γυναικών = women's apartments, from γυνή = woman, ἵππον = a stable, - ἵππος = a horse, ἀμπελών = a vineyard, - ἀμπελος = a vine, οἰνών = a wine-cellar, - οἰνος = wine.

ADJECTIVES.

Adjectives denote some quality, or other circumstance, as belonging to an entity.

§. 21. Adjective ~ Substantive. *a.* The force of the adjective is the same as that of the cognate noun in the genitive case interpreted by “belonging to”; and accordingly, as is shewn in the first example below, the formula of collocation with the article is the same for the adjective and for the genitive of the cognate noun, viz. the attributive formula (§. 8.) as

{	δ βασιλικὸς κῆπος	—	δ τοῦ βασιλέως κῆπος.
{	the royal garden	—	the king's garden.
{	διμόφρων εἰμί	—	τῆς αὐτῆς γνώμης εἰμί.
{	I am like-minded	—	I am of the same mind.
{	ξύλινον ἔκπωμα	—	ἔκπωμα ξύλου.
{	a wooden cup	—	a cup of wood.

This interchange cannot always be made; but in the poetic style, it is carried very far in all languages. Homer has

ἐλεύθερον ἥμαρ = free day i. e. day of freedom.

Many of the instances in the N. T. of a substantive in the genitive used for an adjective are Hebraisms, as

(Luke IV. 22.) τοῖς λόγοις χάριτος = at the gracious words.

(Luke XVI. 18.) οἰκονόμος τῆς ἀδικίας = the unjust steward.

b. A number of adjectives have come to be used substantively through the facility of understanding the appropriate substantive (§. 6. b.). National names, as *Ἐλλῆν*, *Πέρσης*, and nouns in -άς, -άδος, as *μαινάς* = ‘a Bacchante’, were originally adjectives. The omission of *τέχνη* has given rise to a whole class of adjectives used substantively to denote certain arts or studies, as

ἡ μουσικὴ (τέχνη) = music,
 ἡ ἀριθμητικὴ (τέχνη) = arithmetic,
 ἡ γραμματικὴ (τέχνη) = grammar.

The Greeks omitted *πέλαγος* = 'sea', and *δραχμή* with numerals, just as we say 'the Mediterranean', omitting *sea*, and 'a man worth thousands', omitting *of pounds*. Also *όδός* (§. 8. Obs. b.) and *μοῖρα*, hence

ἡ πεπρωμένη (μοῖρα) = destiny,
 ἀπὸ τῆς ἵσης (μοῖρας) = on equal terms.

The following examples occur in the New Testament:

ἡ πνέουσα (αὔρα) = the blast,
 ἡ οἰκουμένη (γῆ) = the world,
 ἡ ὀρεινὴ (χώρα) = the highlands,
 ἡ ἐπιοῦσα (ἡμέρα) = the morrow,
 ἐν λευκοῖς (ἱματίοις) = in white,
 πολλὰς (πληγάς) = many blows,
 ψυχροῦ (ὑδατος) = of cold water,
 ἡ δεξιὰ (χεὶρ) = the right (hand).

Obs. 1. **Numerical Adjectives.** a. **Distributives.** Notwithstanding the wealth of the Greek language in numeral adjectives, nouns, and adverbs, there is no separate form for distributives, which are variously expressed,

σύνδυο = ἀνὰ (εἰς, πατὰ) δύο = in twos = *bini*
 σύντρεις = ἀνὰ (εἰς, πατὰ) τρεῖς = in threes = *terni*
 κ. τ. λ. κ. τ. λ. etc. etc.

b. Greek is particularly rich in ordinals, possessing, besides the common forms *πρῶτος*,* *δεύτερος* κ. τ. λ., and the interrogative form

πόστος; = *quotus?* = *Der wievielste?* = of what order?
 a set of *temporal* ordinals, viz.

δευτεραῖος = on the second day
 τριταῖος = on the third day
 κ. τ. λ. etc.

Notice here *τρίτον ἡμιτάλαντον* = 'two talents and a half', literally 'third half-talent' i. e. the third in counting is a half-talent, not a whole one, as are the first and second in counting. Compare with this

* The use of the cardinal *μία* in the N. T., to denote the *first* day of the week (Mark XVI. 2.), is a Hebraism.

Latin, *sestercius* (semis tertius) = two (asses) and a half,
 German, *Drittthalb Thaler* = two dollars and a half.

c. Multiples and Proportionals. The former relate to size, the latter to number. To complete the view of both, their corresponding adverbs are subjoined.

Multiples		Proportionals	
Adj.	$\Delta \tau \iota \kappa \lambda o v \varsigma$ = twice as big $\tau \rho i \tau \lambda o v \varsigma$ = thrice as big $\kappa. \tau. \lambda.$ etc.	Adj.	$\Delta \tau \iota \kappa \lambda \acute{a} s i o s$ = twice as many $\tau \rho i \tau \lambda \acute{a} s i o s$ = thrice as many $\kappa. \tau. \lambda.$ etc.
Adv.	$\Delta \tau \iota \chi \alpha$ = in two parts $\tau \rho i \chi \alpha$ = in three parts $\kappa. \tau. \lambda.$ etc.	Adv.	$\Delta i s$ = twice $\tau \rho i s$ = thrice $\kappa. \tau. \lambda.$ etc.

d. In the case of compound numerals, the common part need not be repeated, as (Xen.)

μέχρι μὲν δὴ ἔξ η ἐπτακαίδεκα =
up to sixteen or seventeen at any rate.

Obs. 2. Significant Adjectival Terminations. a. In the case of *verbal* adjectives,

<i>-ικός</i>	= fit to act,	as <i>άρχικός</i>	fit to rule
<i>-τήριος</i>	= really acting,	,, <i>σωτήριος</i>	saving
<i>-ιμος</i>	= fit to act, fit passively,	,, <i>τροφιμος</i>	nourishing
<i>-τέος</i>	= <i>-ndus</i> ,	,, <i>τροφιμος</i>	nursling
<i>-τός</i>	= <i>-tus</i> , <i>-bilis</i>	,, <i>ποιητέος</i>	<i>faciendus</i>
<i>-νός</i>	= <i>-tus</i> ,	,, <i>αγαπητός</i>	<i>amatus, amabilis</i>

b. In the case of adjectives *derived from nouns*,

<i>-ιος</i> , and its modifications	<i>-αιος</i> - <i>ειος</i> - <i>οιος</i> - <i>ωος</i> - <i>υιος</i> ,	= <i>of or be-</i> as <i>οὐράνιος</i> = heavenly
	and <i>-ικός</i>	<i>longing to</i> ,,, <i>τεχνικός</i> = artistic
<i>-ρος</i> - <i>αλέος</i> - <i>ηλός</i> - <i>ωλός</i>	{	= <i>full of</i> as <i>φοβερός</i> = fearful
<i>-εις</i> (- <i>εσσα</i> - <i>εν</i>) - <i>ώδης</i> †	{	- <i>osus</i> ,,, <i>χαρίεις</i> = graceful
<i>-εος</i> - <i>ινος</i> = <i>made of</i> ,		as <i>χρυσεος</i> = <i>aureus</i> <i>ξύλινος</i> = wooden

c. A nice distinction is sometimes obtained between two adjectives when one is derived from the other by means of the terminations *-ιος* - *ικός* = *of* or *belonging to*, as

<i>καθαρός</i> = clean	<i>θῆλυς</i> = female
<i>καθάριος</i> = cleanly	<i>θηλυκός</i> = feminine

§. 22. Greek Adjective = English Adverb. The mode or manner is in all languages sometimes expressed

* Even in Latin, sometimes *-tus* = *-bilis*, as *acies invicta* = 'invincible army.'

† This termination is derived from *εἶδος* = 'form', and is sometimes translated accordingly, as *εφηκώδης* = wasp-like.

not by an *adverb* accompanying the verb, but by an *adjective* in concord with the subject, as

πόσον βραδὺς περιπατεῖ = how slow he walks!

In English poetry, this usage is common,

"As thus the patient dove *assiduous* sits" (Thomson); but even in prose, certain kinds of Greek adjectives are regularly so used.

a. Those of an *ordinal* meaning, those denoting mental states, and *quantitative* adjectives, as

(Ordinal) *τεταρταῖος ἀφίκετο* = he arrived *on the fourth day*,

(Mental state) *ἔκόντες ἀμαρτάνετε* = ye willingly *err*,

(Quantitative) *κρήνη ἀφθονος δέουσα* = a fountain *flowing abundantly*.

Other circumstances adverbial in their nature are expressed by adjectives, as

σκοταῖοι προσιόντες = advancing *in the dark*,

σκηνοῦμεν ὑπαλθροι = we encamp *in the open air*.

b. The following may be translated adverbially,

<i>δῆλος</i>	<i>φανερός</i>	<i>δίκαιος</i>	<i>ἄξιος</i>	<i>χαλεπός</i>	<i>ἀμήχανος</i>
}		= manifest,	= worthy,	= difficult,	= impracticable,
<i>ἐπιδοξός</i>		= likely,			
<i>δυνατός</i>		= possible,			

but better English is generally obtained by putting them as adjectives into an impersonal clause, as

{ *δῆλός εἰμι τὴν πατρίδα εὖ ποιῶν* =
I am *manifestly* benefiting my country,

{ *It is manifest that I am benefiting my country.*

{ *όδὸς ἀμήχανος εἰσελθεῖν στρατεύματι* =
a way *impracticable* for an army to enter,
a way *by which it is impossible* for an army to enter.

Obs. **Exception.** The adjectives *πρῶτος*, *μόνος*, agreeing with the subject, do not give the same meaning as the corresponding adverbs qualifying the verb, as

{ *πρῶτος ἔγραψα* = I was the first who wrote.

{ *πρῶτον ἔγραψα* = the first thing I did was to write.

{ *μόνος ἔγραψα* = I was the only person that wrote.

{ *μόνον ἔγραψα* = the only thing I did was to write.

The adjectives express the precedence or singularity of a *person*; the adverbs express the precedence or singularity of an *act*.

§. 23. Degrees of Comparison. *a.* The use of the positive for the comparative is explicable by the omission of *μᾶλλον*, as (Mark IX. 43.)

καλόν σοί ἔστι... ἢ κ. τ. λ. =
it is *better* for thee... than &c.

Here, *μᾶλλον* occurs in the immediately preceding verse; but the Greeks sometimes omitted it before the comparative *ἢ* even when it did not occur in the immediate context, as

οὐτω οὖν ἡμᾶς δίκαιον ἔχειν τὸ ἔτερον μέρος ἢ περ Ἀθηναίονς =
thus then it is right we should have the other part (rather) than the Athenians.

b. The comparative is used, through politeness (*usus ethicus*), for the positive, especially in the case of negative neuters denoting goodness or badness, as (Plat. Phaed. 105 A.)

οὐ γὰρ χειρον πολλάκις ἀκούειν =
for to hear often is not a *bad* thing.

In English, *usus ethicus* would say here 'not the *worst* thing'. On the same principle is the French 'je ne sais pas *trop* bien' = (lit.) 'I don't know *too* well' i. e. I don't know *at all* well'.

c. The Greek comparative has often the force of our *too* or *rather* with the positive, as

ἔδοκες ἢ ἀπόκρισις ἐλευθερωτέρη εἶναι =
the answer seemed to be rather free.

Reference is really made to a standard in the mind, e. g. 'more free *than was fitting*'. This meaning is often conveyed in both Greek and English by the positive, as

όλιγοι ἔσμεν ὡς ἐγκρατεῖς εἶναι αὐτῶν =
we are (too) few to master them.

τὸ ὕδωρ ψυχρόν ἔστιν ὥστε λούσασθαι =
the water is (too) cold for bathing.

d. When two properties of the same subject are com-

pared in degree, both adjectives are put in the comparative, as

Θάττων ἡ σοφώτερός ἐστιν = he is more hasty than wise. Sometimes however both adjectives are positive, μᾶλλον being understood (§. 23. a.), as (Soph. Aj. 966.)

ἔμοὶ πικρὸς τέθνηκεν ἡ κείνοις γλυκύς =

his death was more bitter to me than sweet to them.

e. A peculiarity of the Greeks was to use the superlative for the comparative whenever the comparison lay between one and all others, as

ἀξιολογώτατον τῶν προγεγενημένων =

more noteworthy than (all) the preceding.

When the comparative genitive is interpreted by ἀντί, πρό (13. Obs. 4. a.), such phrases appear logical; but because the force of *of* is partitive, and not comparative, imitations of them in English are illogical, not excepting Milton's

"Adam, the goodliest of all men since born

His sons; the fairest of her daughters, Eve".

In (John I. 15.) πρωτός μου ἡν = 'he was before me', the superlative is used for the comparative though the comparison is not between one and all others.

Obs. **Augmentatives of Comparison.** a. The superlative degree is intensified by the relative words ὡς, ὅπως, ὅσον, οἷον, ὅτι, ἡ with or without a word denoting possibility; by the demonstrative phrase ἐν τοῖς (§. 3. Obs. 2. b.); and by the numeral one εἷς ἀνήρ, as

ἄγων στρατιὰν ὅσην (ἐδύνατο) πλειστην =

leading as large an army as he could,

ὡς (οἷον τε) βέλτιστον = the best possible,

τοὺς ἄγωνιζομένους πλειστα εἷς ἀνήρ δυνάμενος ὀφε-

λεῖν = able to be of *more* service to the contending parties
than any other man.

b. Both comparative and superlative are intensified by πολύ, πολλῷ, and, when a person or thing as at one time is compared with itself as at another time, by αὐτός, as

ἡσαν δυνατώτεροι αὐτοὶ αὐτῶν =

they were mightier than themselves i. e. than ever,

ἡν αὐτὸς ἐαυτοῦ μοχθηρότατος =

he exceeded his own enormities.

c. Both comparative and superlative are accompanied by ὅσῳ — τοσούτῳ (§. 15.), or ὅσον — τοσοῦτον, when two qualities are represented as keeping pace with each other in the same subject, as ὅσῳ σοφώτερός (σοφώτατός) τις ἔστι, τοσούτῳ σωφρονέστερός (σωφρονέστατός) ἔστιν = *the wiser any one is, the more prudent he is.*

PRONOUNS.

Pronouns indicate allusively entities (personal pronouns), or descriptive matter (adjective pronouns).

§. 24. Personal Pronouns. Personal pronouns are substantival demonstratives; and their Greek forms*

* Crosby, whose account of the pronouns is generally followed in the text, traces the origin of the personal pronouns in a few paragraphs (§. 143.), which are subjoined almost entire.

a. The distinction of *person*, like the distinctions of case and number (§. 11 *), appears to have been at first only twofold, merely separating the person speaking from all other persons. Traces of this early use appear not only in the roots common to the pronouns of the 2d. and 3d. persons, but also in the forms common to these persons in the dual of verbs. The most natural way of designating one's self by gesture is to bring home the hand; of designating another, to stretch it out towards him. The voice follows the analogy of the hand. To denote ourselves, we keep the voice at home as much as is consistent with enunciation; while we denote another by a forcible emission of it, a pointing, as it were, of the voice towards the person. The former of these is accomplished by closing the lips and murmuring within, i. e. by saying *m*, which hence became the great root of the 1st. personal pronouns. The latter is accomplished by sending the voice out forcibly through a narrow aperture. This, according to the place of the aperture and the mode of emission, may produce either a sibilant, a linguo-palatal, or a strong breathing. Hence we find all these as roots of the 2d. and 3d. personal pronouns. In the progress of language, these two persons were separated; and their forms became for the most part distinct, although founded in general upon common roots.

so vary in emphasis or demonstrative power as to be capable of classification to some extent into strong and weak forms.

1 st and 2 ^d . Pers.	Strong	Weak
Nominative	$\xi\gamma\omega$, $\sigma\nu$	omitted
Oblique Cases	orthotone forms	enclitic forms *
3 ^d . Person	Strong	Weak
Nominative	$\tilde{\sigma}\varsigma$ (§. 3. Obs. 2. a.) $\tilde{\eta}$ (§. 3. Obs. 1. a.) $\tilde{\alpha}\delta\varepsilon$, $\alpha\sigma\tau\varsigma$, $\tilde{\epsilon}\kappa\varepsilon\tilde{\iota}\nu\varsigma$, $\alpha\tilde{\nu}\tau\varsigma$	omitted
Oblique Cases	{ the same excepting $\tilde{\sigma}\varsigma$, but $\alpha\tilde{\nu}\tau\varsigma$ must begin the clause }	$\alpha\tilde{\nu}\tau\varsigma$, but not be- ginning the clause.

a. The unemphatic nominatives are omitted, because the Greek verb has well-marked personal endings

b. The μ of the 1st. pers. passed in the old Plural, which afterwards became the Dual, into the kindred ν (compare Latin *nos*), and assumed an initial α , attenuated into ε . To form a new Plural, the idea of plurality was conveyed by doubling the μ (Aeol. $\tilde{\alpha}\mu\mu\epsilon\varsigma$), or more commonly by lengthening the initial α into η , and pronouncing it with the rough breathing, $\eta\mu\epsilon\varsigma$. From this new plural of the 1st. pers. was formed a new plural of the 2^d. pers. by substituting for the initial η the most protrusive of the vowels, v , the very sound with which a French child of the present day starts his goat-drawn chariot, crying '*Hue! Hue!* les chèvres', the natural vowel-sound of address, and so obtaining $\tilde{v}\mu\epsilon\varsigma$. This new plural excepted, the plural and dual form of the 2^d. and 3^d. persons have the same root, in which plurality is expressed by joining two of the signs of these persons, $\sigma\varphi-$ = $\sigma+$ an aspirate. In the separation of the two persons, the $\sigma-$ became appropriated to the 2^d. person, passing in Doric into $\tau-$, as in Latin and in the verb-endings $-te$, $-tov$, $-tis$; while the aspirate became appropriated to the 3^d. person.

c. The nominative $\xi\gamma\omega$ was probably obtained from the original μ by means of strengthening prefixes used to increase the subjective force of the word, thus

$\xi\text{-}\gamma\text{-}\acute{o}\text{-}\mu$... the γ being inserted to prevent hiatus,
 $\xi\gamma\acute{o}\nu$... no Greek word ending in μ ,
 $\xi\gamma\acute{o}\alpha$... α being the vowel equivalent of ν (§. 11*).
 $\xi\gamma\omega$.

* These are $\mu\sigma\tilde{v}$, $\mu\sigma\iota$, $\mu\acute{e}$, $\sigma\sigma\tilde{v}$, $\sigma\sigma\iota$, $\sigma\acute{e}$.

(§. 31*). Farther, the accusative, and sometimes also the dative, when not particularly emphatic, is omitted after a verb; but this happens most frequently with the 3^d. personal pronouns, as

μέρος δέ τι πέμψας πρὸς τὸ φρουριον αἴρει = and having sent a detachment to the fortress, he takes it.

ἐν ᾧ δ' ἀν τῶν φυλῶν πλεῖστοι ὥσιν ἀνδρικώτατοι ἐπαινοῦσιν = in whichever tribe are the most heroes, *that one they praise.*

b. The demonstrative force of ὅς and δ is far inferior to that of ὅδε, οὗτος, ἐκεῖνος.

Obs. *Αὐτός* emphatic. Etymologically αὐτός = αὐτὸς = 'again he' (*idem*), or 'himself' (*ipse*). For its uses with the article, see §. 7. e. Without the article, it has the force of *ipse* in the nominative case always, but in the oblique cases only when it begins the sentence. Hence

αὐτὸς ἔφη = *ipse dixit* = himself (the master) said,

αὐτὸν εἶδον = *ipsum vidi* = I saw himself,

(εἶδον αὐτόν = *eum vidi* = I saw him).

πέμπτος αὐτός = himself the fifth i. e. he with four others.*

Hence also the use of αὐτός to emphasize other pronouns, as

αὐτὸν τούτον ἐνεκεν = on this *very* account,

αὐτόν με ὑβρισεν = it was I myself he insulted,

{ αὐτῶν γὰρ σφετέρησιν ἀτασθαλίησιν ὅλοντο =

{ sua enim *ipsorum* temeritate perierunt =

{ for by their *own* recklessness they perished.

Sometimes the emphasized pronoun is omitted, by Homer even in oblique cases (Jelf. 656. 1.), but by Attic writers only in the nominative, as

αὐτὸς ἐπαίδευσας τὸν γιόν = you brought up your son *yourself*,
αὐτοί ἐσμεν = we are alone (by ourselves).

In the last example, αὐτοί emphasizes particular persons to the exclusion of all others: the *principal* persons become the *sole*: αὐτός = *μόνος*.

§. 25. **Reflexive Pronouns.** a. All substantival pronouns are in one sense *reflexive*: for they all, except

* Plato uses a similar expression:

σύμψηφος ἡμῖν εἰ καὶ σὺ ἐν τριτῶν = you too are agreed with us, *you (one) of thirds* i. e. *you and two others*.

when used anticipatively (§. 3. Obs. 1. a.), point back to a preceding noun. But the reflexive pronoun, properly so called, represents the subject either of its own clause (*direct reflexion*), or of the principal clause (*indirect reflexion*) as receiving back an action that had proceeded from itself, i. e. as *object*, and occurs therefore only in the oblique cases. If the *subject* of a clause requires to be recalled, as *subject*, *αὐτός* does so emphatically, as

οὓς ὁ φῆτωρ ποιεῖται λόγους, τούτους γράφει αὐτός =
what speeches the orator makes, these he writes himself.

b. Reflex action is expressed *weakly* by the middle voice without any pronoun (§. 31. Obs. 3.); but with pronouns, the reflexive forms to be used when the reflex reference is direct or emphatic are *ἐμαυτοῦ*, *σεαυτοῦ*, *έαυτοῦ*, and those to be used when the reflex reference is indirect and unemphatic are the oblique cases of the common personal pronouns *ἐγώ*, *σύ*, *αὐτός*.* Hence three combinations,

Emphatic { "Εφη τοὺς Ἀθηναίους έαυτοὺς ἀδικεῖν =
and Direct. { He said the Athenians injured themselves,

Emphatic { "Εφη τοὺς Ἀθηναίους έαυτὸν ἀδικεῖν =
and Indirect. { He said the Athenians injured himself,

Unemphatic { "Εφη τοὺς Ἀθηναίους αὐτὸν ἀδικεῖν =
and Indirect. { He said the Athenians injured him.

In Homer, the elements of *ἐμαυτοῦ*, *σεαυτοῦ*, *έαυτοῦ* are written apart even in the singular, but the order is still the same; distinguish therefore between *ἐμ'* *αὐτόν* and *αὐτόν με*, as

ἐμ' *αὐτὸν ἡδίκησα* = I injured myself (reflexive),
αὐτόν με ἡδίκησεν = it was I myself he injured (emphatic).

* Early English had no specially reflexive pronoun: the common personal pronouns were used reflexively as in English poetry of the present day, which rejects the clumsy forms, *himself*, *themselves* etc. Thus: 'He sat *him* down and warmed *him* at the fire'.

Obs. 1. *Oὐ* or *ἕ*. This pronoun was becoming obsolete in the age of Pericles, its singular forms disappearing first. *Oὐ* and *ἕ*, according to Krüger, are found in Plato alone of the great Attic prose writers.

a. In Epic and Ionic, *οὐ* is both personal and reflexive, but in Attic only *οἶ* and *σφίσι* occur often in the merely personal sense; sometimes also *σφεῖς*, but never in the first clause of a sentence. In Attic prose, *οὖ* is *indirectly* reflexive.

b. The form *ἕ* was sometimes plural, as (Hymn to Venus 267.) *τεμένη δέ ἐπικλήσκονται* = but these they call temples, which may account for the *ἕ* element in *ἔαντοῦ* remaining unchanged in the plural *ἔαντῶν*. The forms *σφέ*, *μίν*, *νίν* were also both singular and plural.

c. There are traces in *οὖ*, and in its derivatives and compounds, of a general personal reference, as if it had been equivalent to our suffix *-self*. *Oὐ* itself, in its Ionic form *εἰο* is found for *ἔμοῦ* (Apoll. Rhod. II. 635.). The possessives derived from *οὖ* and *σφεῖς*, viz. *ἔός*, *ος*, *σφέτερος* occur in the sense of *mine*, *thine*, *our*, *your*; and the compound *ἔαντοῦ* occurs even in Attic prose for *σεαντοῦ*, and *ἔμαντοῦ*, as (Plat. Phaed. 91. c.)

ἄμα ἔαντον τε καὶ ὑμᾶς ἔξαπατήσας =

having at the same deceived both (my) *self* and you.

In such examples, the precise personal reference is determined by the context, as in the case of *αὐτός* = *myself*, *thyself*, *himself* (§. 24. Obs.).

Obs. 2. **Reciprocals.** Reciprocal action is expressed *weakly* by the plural of the middle voice without any pronoun (§. 31. Obs. 3. e.); strongly by *ἄλληλον*, the proper reciprocal pronoun, instead of which however the reflexive pronouns including the plurals of *ἔγω* and *σύ* are often used, as

ἐπράξαμεν ἡμεῖς κακεῖνος πρὸς ἡμᾶς εἰρήνην =
he and we made peace *with each other*.

So in French, ‘donnons-nous la main’ = ‘let us give *each other* the hand’, i. e. ‘let us shake hands’. The reduplication of *ἄλλος*, out of which *ἄλληλον* arose, is also found, as

ἄλλος ἄλλον (l'un l'autre) . . . ἔθραυσεν = one was dashing against another i. e. they were dashing against one another.

§. 26. **Possessive Pronouns.** The *weak* form of indicating the possessor is furnished by the article, as explained in §. 7. Obs. 2., with the aid of the middle voice wherever the action is reflexive (§. 31. Obs. 3. d.). The *strong* forms are furnished by the genitive case of a personal pronoun, or by the possessive adjective pronouns

themselves. But of these, the dual possessives *νωΐτερος*, *σφωΐτερος* are found only in the Ionic dialect; and *ὅς* = 'his' is not used in Attic but by the poets and that rarely; and *σφέτερος* is exclusively reflexive. In short, except in the case of *ἡμέτερος* and *ὑμέτερος*, the possessive adjective pronouns are generally replaced by the genitive case of the corresponding personal pronoun. (For the formulae, see §. 7. b. §. 8. Obs. c.). These two ways of denoting the possessor immediately succeed each other in (Soph. Trach. 485.)

κείνου τε καὶ σὴν ... χάριν = for his sake and thine own.

Obs. **Possessives** = **Objective Genitive**. Possessive adjective pronouns in their proper sense are equivalent to the *subjective* genitive of the personal pronouns; but they are sometimes used also for the *objective* genitive of the corresponding personal pronoun, as

(Od. XI. 202.) *σός τε πόθος . . . Ὀδυσσεῦ* =
longing for thee . . . Ulysses,

(Soph. Oed. Col. 1418) *τῆς ἐμῆς ὑπονομγίας* =
from your good offices towards me.

(Thuc. I. 33. 3.) *φόβῳ τῷ ὑπετέρῳ* =
through fear of you.

§. 27. Interrogative Pronouns. The Greek interrogatives, direct and indirect, are shown in the subjoined table of correlated adjective pronouns.

Direct	Indirect				
Interrog.	Indef.	Relative	Interrog.	Demonstrative.	
<i>τίς*</i>	<i>τις</i>	<i>ὅς</i>	<i>ὅστις</i>	<i>ἐκεῖνος</i>	<i>οὗτος</i>
<i>ΠΟΣ†</i>	<i>ΠΟΣ</i>		<i>ΟΠΟΣ</i>	<i>ΤΟΣ</i>	<i>αὐτός</i>
<i>ποτερος</i>	<i>ποτερός</i>		<i>οποτερος</i>		<i>ξτερος</i>
<i>ποστος</i>			<i>οποστος</i>		
<i>πόσος</i>	<i>ποσός</i>	<i>ὅσος</i>	<i>οπόσος</i>	<i>τόσος</i>	<i>τοσοῦτος</i>
<i>ποιος</i>	<i>ποιός</i>	<i>οἷος</i>	<i>οποῖος</i>	<i>τοῖος</i>	<i>τοιοῦτος</i>
<i>πηλίκος</i>		<i>ἡλίκος</i>	<i>οκηλίκος</i>	<i>τηλίκος</i>	<i>τηλικοῦ-</i>
<i>ποδαρος</i>			<i>οποδαρος</i>		<i>τος</i>
<i>ποσταιος</i>			<i>οποσταιος</i>		<i>κόσδε</i>

* *Τίς* interrogative is distinguished from *τις* indefinite to the eye by always having the acute accent on the *ι* syllable.

† The forms in capital letters are not found in Greek, but are the supposed roots of the forms printed below them respectively.

The indirect or dependent interrogative recalls the direct question without putting it again, as

τίς; *οὐκ οἶδ' ὃστις* = who? I don't know who.

ποσταῖοι ἀφίκοντο; = on what day did they arrive?

οὐ μέμνημαι δποσταῖοι = I don't remember on what day.

Very frequently however the direct interrogatives are used instead of the indirect. For the use of the indirect interrogatives as indefinite relatives, see §. 29.

§. 28. Indefinite Pronouns. The indefinites are Englished thus,

τις = some, any,

ποτερός = one or other of two,

ποσός = of some, any size,

ποιός = of some, any kind.

a. The indefinite *τις* is enclitic, as (Xen. Cyr. VII.5.)

τούτων δὲ τῶν περιεστηκότων ἢ τινα ἢ οὐδένα οἶδα = of those standing round I know either some one or nobody, i. e. scarce any body.

But taken substantively as the opposite of *μηδέν* = 'a nobody', *τις* is accented according to the usual rules, as

ηὔχεις τις εἶναι = you boasted of being a somebody.

Sometimes the meaning 'any one' passes into 'each one', as (Xen. Cyr. I. 2.)

παιδεύειν, ὅπως τις ἐθέλει, τὸς ἑαυτοῦ παῖδας = to educate, as *each* pleases, his own children.

The indefinite force of *τις* may be rendered by the 2^d. pers. sing. of a verb, as

φαίης ᾧν = you i. e. any one would say.

Subjoined to adjectives, *τις* attaches to them a certain vagueness, as

δύσβατός τις δ τόπος φαίνεται καὶ κατάσκιος = it seems an impassable and dark sort of place.

b. The demonstrative indefinite *δέεῖνα* is used to indicate a person or thing definitely known to the speaker, but not named, as

τὸν δεῖνα γιγνώσκεις; = do you know what d'ye call him?
Distinguish between *ὁ δεῖνα* = *quidam* and *τις* = *aliquis*.

Obs. 1. *A* or *An* how rendered. The English indefinite article is most often not represented at all. When truly indefinite, it may be rendered by *τις* indefinite, as

τις εἶπεν; *γυνὴ τις* = who said it? a woman.

When generalising a substantive, its force is the same as that of the definite article (§. 5. Obs. 1. a.), and its Greek representative is *ὁ ἡ τό*, as

ὁ βοῦς ἔων ἐστι πολλὰ χρήσιμον =
an (the) ox is a very useful animal.

When distributive in force, *a* or *an* is rendered by *ὁ ἡ τό* (§. 5. Obs. 1. b.), or by *κατά* with or without *ἔκαστος*, as

τρεῖς ἡμιδαρεικὰ κατ' ἄνδρα =
three half-darics a man.

Obs. 2. a. *Ἄλλος* ~ *ἕτερος*. Originally, these differed like *alius* and *alter*, the former denoting another of many, and the latter another of two, as of the hands, without any idea of opposition. Latterly however, *ἕτερος* came to denote preferably another of two opposites, thereby denoting a difference of *kind*, whereas *ἄλλος* continued to denote generally a difference of individuality merely. This distinction is finely brought out in (Gal. 1. 6.)

θαυμάζω ὅτι οὐτω ταχέως μετατίθεσθε εἰς ἕτερον εὐαγγέλιον, *οὐ οὐκ ἔστιν ἄλλο* = I wonder that ye are turning so soon to another gospel, which is not another (of the same kind).
 { *τὸ ἕτερον στρατευμα* = the other army (a different whole),
 { *τὸ ἄλλο στρατευμα* = the rest of the (same) army.
 { *οἱ ἕτεροι* = the opposite party,
 { *οἱ ἄλλοι* = the rest (of the same party).
 { *ἕτερον ποτήριον* = une autre tasse = a different cup,
 { *ἄλλο ποτήριον* = encore une tasse = one cup more.

b. The adverbial translation of *ἄλλος*, yet i. e. *in addition*, *apart from*, obviates the illogicality of such phrases as (Xen. An. I. 55.)

οὐ γὰρ ἦν χόρτος, οὐδὲ ἄλλο δένδρον οὐδέν =
for there was no grass, nor yet any tree.

This use of *ἄλλος*, which is shared by *ἕτερος*, is frequent with numerals.

§. 29. **Relative Pronouns.** All relative words belong to that stage of a language in which the *dependence* of certain clauses on a principal one is marked (§. 4.);

and the peculiar function of relative *pronouns* is to introduce the dependent clauses called *adjectival* (§. 1. Obs. 4.). The list in §. 27. shows that there are relative pronouns of quantity ($\delta\sigmaος$, $\eta\lambdaικος$), and of quality ($οιος$), as well as of individuality ($\delta\varsigma$). The indirect interrogatives in that list correspond to what are called compound relatives in English, as

$\tauι\ λέγει$; $\delta\tauι\ λέγει\ οὐκ\ \eta\kappaουσα$ =

what says he? I didn't hear what (that which) he says.

Compared with $\delta\varsigma$, which may be called a *definite* relative because of its predilection for a definite antecedent, $\delta\sigmaτις$ may be called an *indefinite* relative because of its predilection for an indefinite antecedent, as

$Zε\bar{u}\varsigma\ \delta\varsigma\ \dot{\epsilon}\varphiορ\tilde{\alpha}\ \pi\acute{a}n\tau\alpha$ =

Jupiter who beholds all things,

$\mu\alpha\kappa\acute{a}ριος\ \delta\sigma\tau\iota\varsigma\ ο\acute{u}σι\alphaν\ \kai\ νο\acute{u}ν\ \dot{\epsilon}\chi\iota\varsigma$ =

happy *he who has means and mind.*

In its composition, $\delta\sigmaτις$ is probably an instance of inverse attraction (§. 67. Obs. 2.), on the principle of which it may be resolved, as

$\nu\acute{e}o\upsilon\ \xi\eta\tau\omega\ \delta\sigma\tau\iota\varsigma\ \mu\iota\ \dot{\nu}\pi\eta\varrho\epsilon\tau\eta\varsigma\iota\varsigma$ =

$\nu\acute{e}o\upsilon\ \tau\iota\upsilon\dot{\alpha}\ \xi\eta\tau\omega\ \delta\varsigma\ \mu\iota\ \dot{\nu}\pi\eta\varrho\epsilon\tau\eta\varsigma\iota\varsigma$ =

I am seeking *a lad who shall serve me.*

Another way of making $\delta\varsigma$ indefinite is by adding to it the particle $\ddot{\alpha}v$, but this form can be used only with the Subjunctive Group of tenses, as

$\pi\varrho\acute{a}t\tau\iota\varsigma\ \ddot{\alpha}\ \ddot{\alpha}v\ \delta\acute{o}\xi\eta\ \alpha\acute{u}\tau\omega$ = *he does whatever seems good to him.*

On account perhaps of its superior handiness, $\delta\varsigma$ is often used for other relatives, especially for $\delta\sigmaτις$ and $οιος$, as

$\tau\iota\upsilon\alpha\dot{\nu}\tau\alpha\ \lambda\acute{e}γε\iota\varsigma\ \ddot{\alpha}\ \ο\acute{u}\delta\iota\varsigma\ \ddot{\alpha}v\ \varphi\acute{h}\sigma\iota\varsigma\iota\varsigma\ \dot{\alpha}\nu\vartheta\varrho\acute{a}\pi\omega\varsigma$ =

you say such things as no human being would say.

§. 30. Demonstrative Pronouns. *a.* The personal predilection of the Greek demonstratives is as follows, $\delta\delta\varepsilon$ = *hic* = *questo* = *this (where I am)*,

*οὗτος** = *iste* = *cotesto* = that (where *thou art*),
ἔκεῖνος = *ille* = *quello* = yonder (where *he is*).

Examples are

(Eur. Or. 380.) *Ὄδ' εἰμί Ορέστης* = here I Orestes am,
 (Soph. Aj. 89.) *ὦ οὗτος, Αἴας, δεύτερον σε προσκαλῶ* =
 Halloo! (lit. *you there*) Ajax, a second
 time I call thee.

(Plat. Phil. 36. d.) *ὦ παῖς ἔκεινον ἀνδρός* = O child of
 yonder man i. e. of him who is dead,
 as if *ἔκεινον* = 'far away'.

b. The demonstratives are also *paired* according to
 the personal predilection of each. At the bar, the pleader
 uses

ὅδε or *ὅδ'* *αὐτήρ* = himself or his client (*ego*),
οὗτος = the opposite party (*tu*).

In discourse, what is about to be said, as being still in
 the speaker's mind, still belonging to the *ego*, is indi-
 cated by *ὅδε*, and what has already been said, as be-
 longing to the person addressed (*tu*), is indicated by
οὗτος, as

τεκμήριον δὲ τούτον καὶ τόδε = and of *this* (*which has*
been stated), *this* (*which follows*) is also a proof.

Ἐπὶ τούτοις Ξενοφῶν τάδε εἶπεν =

Thereupon Xenophon spoke as follows.

In like manner are distinguished

<i>τοιόσδε</i>	}	relating	<i>τοιοῦτος</i>	}	relating
<i>τοσόσδε</i>		to what	<i>τοσοῦτος</i>		to what
<i>τηλικόσδε</i>		follows	<i>τηλικοῦτος</i>		precedes.

Of two things or persons, *οὗτος* denotes the nearer, or,
 failing that, the more important; *ἔκεῖνος*, the remoter,
 or, failing that, the less important.

c. When two demonstratives are combined, the per-

* *Οὗτος*, like *iste*, is used to express a contemptuous re-
 ference.

sonal predilection of each still appears, as (Soph. Oed. Col. 138.)

ὅδ' ἔκεινος ἔγώ = Here I am, the far-away man (as was supposed).

Similarly, a proverb is introduced by

τόδ' ἔκεινο = the following old saying.

Obs. **Augmentatives of Pronouns.** *a.* Any word is emphasized by *γε* following; but this enclitic is written with *ἔγώ* and *σύ*, like the Latin enclitics, in one word, *ἔγωγε*, *σύγε*.

b. Definite relatives (§. 29.) are emphasized by *-περ*, and sometimes *δὴ*, as

ὅσπερ = who *indeed*,
ὅσοσπερ = even as big as,
ολόσπερ = just such as.

c. Indefinite relatives (§. 29.) are emphasized by *-δη*, *-δήποτε*, *-οῦν*, which answer to the enclitic *-cunque* in Latin pronouns, as

ὅστισδή
ὅστισδήποτε
ὅστισοῦν } = *quicunque*, *ὅποσοσδή*
ὅσοσδήποτε
ὅποσοσοῦν } = *quantuscunque*.

d. Demonstratives are emphasized by suffixing a long oxytone *-ι*, which absorbs every short vowel, and makes the immediately preceding long vowel or diphthong be regarded as short, as

οὗτοι, *αὗτη*, *τοὗτι* = *hicce*, *haecce*, *hocce* = *celui-ci*.

Even adverbs derived from demonstratives are so emphasized, as
ώδι from *ώδε* *τούτοι* from *τοῦτο γε*.

e. Here may be noticed *ολός τε*. The antecedent *τοῖος* or *τοιοῦτος* being understood, *ολός* = 'such as', hence 'qualified'; and *ολός* is often used in this sense with the infinitive. But more frequently *ολός* is strengthened by the enclitic *τε*, and the meanings 'able', 'possible' emerge, as

οὐ γάρ φέρειν ὅπλα ολός τ' ἦν = for he was not *able* to carry arms.

VERBS.

The verb predicates something of an entity,*

§. 31. **Greek Voices.** *a.* As the three declensions were originally one (§. 11.*), so probably were the three

* The personal endings of the Greek verb, which enable

voices, the *-μαῖ* form being the most ancient, and the primitive conception of the verb being absolute, as of an operation or state of the subject. This absolute conception, in which the neuter and reflexive elements are obvious, would naturally become passive, when viewed with reference to an external *cause*,* transitive when viewed with reference to an external *object*. This primitive condition of the verb is illustrated by the threefold use of *ἔργάζομαι*, as intransitive, passive and transitive.

(Dem.) *ἔργάζονται ἐν τοῖς ἔργοις* =
they *work in the mines.*

(Dion. H. 8. 87.) *σκεύη οἷς ἡ γῆ ἔργάζεται* =
tools with which the land is *worked.*

(Thuc. II. 76.) *οἰκοδόμημα ἔργάζεσθαι* =
to erect (work at) a building.

b. It accords with the above view of the original meaning of the verb that those forms of the perfect and aorist called secondary, and which are known to be more

it to predicate (§ 1. Obs. 2.), were originally personal pronouns appended to the stem of the verb, as is shewn in the following table, where the *-μαῖ* form takes precedence as being the oldest, and the *-ω* form is omitted as being a more recent active form than that in *-μι* (§. 31.). The old personal pronouns may be compared with existing pronominal stems, thus

μι σι τι = old personal pronouns,

με σε το = existing pronominal stems,

το being the stem of what is now called the article (§. 27).

Indicative.

Unaugmented Tenses.

Augmented Tenses.

Sing.	1. <i>-μαῖ</i>	<i>-μι</i>	(Compare <i>eram</i>)	<i>-μην</i>	<i>-ν</i>
	2. <i>-σαῖ</i>	<i>-σι</i>		<i>-σο</i>	<i>-σ</i>
	3. <i>-ταῖ</i>	<i>-τι</i>	(Compare <i>erat</i>)	<i>-το</i>	(<i>-τ</i>)
Plur.	1. <i>-μεθα</i>	<i>-μεν</i>		<i>-μεθα</i>	<i>-μεν</i>
	2. <i>-σθε</i>	<i>-τε</i>		<i>-σθε</i>	<i>-τε</i>

* The passive form has actually been evolved from the reflexive in the Scandinavian languages (Latham's Eng. Lang. 4th ed. §. 167. a.); and in the Slavonic languages, the reflexive and passive forms are identical throughout.

ancient than the first perfects and aorists,* often differ from the other parts by being intransitive in meaning, as

from <i>ἄγνυμι</i>	= I break	<i>ἔαγα</i>	= I am broken
„ <i>δλλυμι</i>	= I destroy	<i>ἔλωλα</i>	= I am undone
„ <i>πήγνυμι</i>	= I fix	<i>πέπηγα</i>	= I stick fast
„ <i>δήγνυμι</i>	= I tear	<i>ἔρθωγα</i>	= I am burst open
„ <i>ἀνοίγω</i>	= I open	<i>ἀνέωγα</i>	= I stand open
„ <i>ἵστημι</i>	= I make stand	<i>ἔστην</i>	= I stood.

c. The first distinction of voice in the Greek verb seems to have been made in favour of specially transitive verbs, the *-ματι* form passing into *-μι*, for in the Greek which has come down to us, excepting only *εἰμί* = I am, and *εἰμι* = I go — both of which, on account of their elementary meaning and frequent use, are peculiarly subject to irregularities of form — all verbs in *-μι* are transitive.

d. The form in *-ω* is of later origin, presupposing the existence of *ἔγω* (§. 24.* c.). Accordingly, most verbs in *-ω* are derivatives, whereas those in *-μι* are all primitives, and moreover express primary notions, as *give*, *put* &c. The form in *-ω*, unlike that in *-μι*, had no special attribution to the transitive meaning, and appeared as a supplanter of both the others, of the *-μι* form altogether, and of the *-ματι* form in so far as it was neither strictly reflexive nor strictly passive. In Homer,

* Generally speaking, the duplicate tenses in Greek were like the duplicate tenses in English, as *spake* and *spoke*, *clomb* and *climbed*, *swoll* and *swelled* &c. i. e., they were few, were primarily dialectical varieties, and in the language at large succeeded one another as old and new. In some of the English duplicates, as in the Greek, the later form is the more decidedly transitive: *swelled* is more decidedly transitive than *swoll*, and *hanged* than *hung*. Still more decidedly in German,

<i>ich blieb</i>	= I became white, I lost colour,
<i>ich bleichte</i>	= I made white, I bleached.
<i>ich weich</i>	= I became soft, I yielded,
<i>ich weichte</i>	= I made soft, I mollified.

the old *-μαῖ* form may be seen struggling with the new one in *-ω*, several verbs of a transitive or neuter signification being used by him indiscriminately in both forms, while others, used by him only in the *-μαῖ* form, are used by later writers in the *-ω* form. Such are *ἀκούεσθαι* and *ἀκούειν*, *δρᾶσθαι* and *δρᾶν*, *ἰδέσθαι* and *ἰδεῖν*, *φλέγεσθαι* and *φλέγειν* (Jelf. §. 363. 5.).

e. The *-μαῖ* form, because it retains a monopoly of the reflexive and passive meanings, is the proper form of the reflexive, or middle, and passive *voices* i. e. utterances; the verbs in *-μαῖ* which are neither reflexive nor passive in meaning being called *deponents*, as if laying aside the meaning proper to their form. The *-μι* and *-ω* forms, on the other hand, which never have a reflexive or passive meaning, are forms of the active voice, the meaning of which may be transitive or intransitive. The paradigms of the Greek verb in grammars would be historically more accurate, if they represented the middle voice as including the perfect and pluperfect tenses, and the passive voice as using all the middle forms excepting the aorist and future, for which two tenses the passive voice has forms of its own.

Obs. 1. Interchange of Forms. Many anomalies in the Greek verb are explicable on the above principles. As the newer verbal forms were developed and established according to natural laws, which did their silent work apart from human consciousness, it came to pass that the change from the primitive form in *-μαῖ* to the later form in *-ω*, was made, not uniformly and completely, but partially and with irregularities. In some verbs, the future alone remained of the *-μαῖ* form: in others, two futures coexisted, one from the *-μαῖ* form, and another from the form in *-ω*. Witness the following list of "Verbs preferring a Future of the Middle Form" taken from Geddes' Gr. Gram. §. 130.

(<i>Αείδω</i>) <i>ἄδω</i>	<i>Δάκνω</i>	<i>καίω</i>	<i>*πάσχω</i>	<i>στροβέω</i>
<i>ἀκονῶ</i>	<i>δείδω</i>	<i>*κοτέω</i>	<i>πηδάω</i>	<i>συρίζω</i>
<i>ἀλαλάξω</i>	<i>*διδράσκω</i>	<i>*λαγχάνω</i>	<i>*πίνω</i>	[<i>Τλαω</i>]

* "Those with an asterisk have no Future Active. Those without an asterisk have one, though rare or late."

ἀμαρτάνω	* Εἰμί	* λαμβάνω	* πίπτω	τίκτω
ἀπαντάω	ἐπαινέω	λασκω	πλέω	τρέχω
ἀπολαύω	ἐσθίω	* Μανθάνω	πνέω	* τρωγώ
ἀρπάζω	Ζάω	* Ναίω	* Ρέω	* τυγχάνω
Βαδίζω	Θαυμάζω	νέω	Σιγάω	* ταθάζω
βαίνω	θέω	Οίμωξω	σιωπάω	* Τστερέω
βιόω	* θνήσκω	* ὄλολυξω	* σκοπέω	* Φεύγω
βλώσκω	* θρωσκω	ομνυμι	σκώπτω	* Χανδάνω
βοάω	Κάμνω	* ὄράω	σπουδάζω	* χάσκω
Γελάω	κερδαίνω	* ὅτοτύξω	* στοναχέω	* χωρέω.
γοάω	κιγάνω	Παίζω		

In like manner, since the reflexive and passive senses are akin, and their verbal expression was originally the same, it is not wonderful that the forms which became specially reflexive or middle should be occasionally used in a passive sense, and that the forms which became specially passive should be occasionally used in a reflexive sense. The most signal illustration of this is the future *middle* which, particularly in Attic Greek, is taken in a passive sense, in prose when the passive form was not in use, and in poetry when the middle form suited better the verse. Witness the following list of “Verbs (chiefly pure) having Future Middle with Passive sense” taken from Geddes’ Gr. Gram. §. 131.

* Αδικέω	* Εάω	Λανθάνω	* Παιδεύω	* τελέω
ἀλγύνω	εῖργω	λέγω	* παρηγορέω	τηρέω
ἀμφισβητέω	εὐλογέω	λυπέω	* πέρθω	τιμάω
ἀνδραποδίζω	ἐχθραίρω	Μαρτυρέω	* πλύνω	τρίβω
ἀνιάω	Ζημιόω	μαστιγώ	* ποιέω	* τύπτω
ἀπιστέω	* Ισχναίνω	μυημονεύω	* πολεμέω	* Τω
ἀρχω	Καλέω	* Νομίζω	* πολιορκέω	Φέρω
αὐταίνω	* καταφρονέω	Ἐηραίνω	* Στερέω	* φθείρω
αὐξάνω	* κηρύσσω	Οίκεω	* στρεβλώ	φιλέω
ἀφαιρέω	* κινέω	όμαλίζω	* στυγέω	* φρουρέω
Βλάπτω	* κραίνω	όμολογέω	* Ταράσσω	* Ωφελέω
Δηλόω	* κωλύω	ονειδίζω	* τελευτάω	

Obs. 2. **Deponents.** Deponent verbs are called middle or passive, according as their aorists take the middle or the passive form, the aorist of the passive form however not having necessarily a passive sense. The following list of passive deponents, the aorists of which though passive in form are not passive in meaning, is taken from Curtius’ Gr. Gr. §. 328. 2.

* “Those with an asterisk have no Future Active. Those without an asterisk have one, though rare or late.”

ἀγαμαι	δέομαι	ενλαβέομαι	ἀπο-
* αἰδέομαι	δέρκομαι	* ἥδομαι	* δια-
ἀλάομαι	* διαλέγομαι	* ἔν-	νοέομαι
ἀμειλλάομαι	δύναμαι	προ-	ἔν-
* ἀρνέομαι	ἐναντιόμαι	* ἐπι-	προ-
* ἀχθομαι	ἐπίσταμαι	μετα-	* οἴομαι
βούλομαι			σέβομαι
			φιλοτιμέομαι.

Some deponents have had both forms of the aorist, but at different epochs; thus *ἡρασάμην* is Homeric, *ἡράσθην* Attic, without any difference of meaning. And both forms, the really contemporaneous and the antiquated, are sometimes found in the same writer; thus *μέμφασθαι* and *μεμφθῆναι* are both found in Euripides. But when both forms are really contemporaneous, the passive form has a passive meaning, as (Jelf. §. 368. 3. b.)

δεξασθαι	= to receive	δεχθῆναι	= to be received,
βιασασθαι	= to force	βιασθῆναι	= to be forced,
κτησασθαι	= to acquire	κτηθῆναι	= to be acquired,
λάσασθαι	= to heal	λαθῆναι	= to be healed,
θεάσασθαι	= to gaze at	θεαθῆναι	= to be gazed at,
όλοφνρασθαι	= to lament	όλοφνρθῆναι	= to be lamented,
λογισασθαι	= to reckon	λογισθῆναι	= to be reckoned,
αἰκίσασθαι	= to beat	αἰκισθῆναι	= to be beaten,
ἀκέσασθαι	= to cure	ἀκεσθῆναι	= to be cured,
ἀποκρίνασθαι	= to answer	ἀποκριθῆναι	= to be divided.

Obs. 3. **Middle Voice.** a. The reflexive voice is called *middle* because, the subject being represented in it as directly or indirectly the object also, this voice stands in respect of meaning between the active and the passive. The reflexive meaning takes various forms, as

Indi-	{ ἀποπέμπομαι	= I send away <i>from myself</i> (Gen.)
rect	{ παρασκενάζομαι	= I provide <i>for myself</i> (Dat.)
Direct	λονομαι	= I bathe <i>myself</i> (Acc.)

b. The *direct* reflexive reference is universal with verbs denoting an action performed on one's own body, as *clothing*, *anointing*, *crowning*, *strangling*. But except with such verbs, and with those which are causative in the active voice, as *φοβέω* = 'I make another afraid', *φοβέομαι* = 'I make *myself* afraid' i. e. 'I fear', the directly reflexive reference is generally, and in case of emphasis always, expressed by a reflexive pronoun (§. 25.) with the active, as

{ ἔθιξω	ἔμαντόν	= I accustom <i>myself</i> ,
{ δέρομαι		= I'm cudgelling <i>myself</i> ,
{ δέρω	ἔμαντόν	= it's <i>myself</i> I'm cudgelling,

* Those with an asterisk have a future of the passive form besides the more common one of the middle form. (Curtius' Gr. Gr. §. 328. 2.)

and sometimes even with the middle, as

(Thuc. I. 31. 7.) *οὐδὲ ἐσεγράψαντο ἑαυτούς* =

nor had they inscribed themselves,

(Xen. Cyr. II.) *Κῦρος δὲ αὐτῷ σκηνὴν μὲν κατεσκενάσατο* =

Now Cyrus prepared a tent for himself.*

c. The indirectly reflexive reference is more apt to escape notice, because it is seldom represented by a separate word in English, as

ἀμύνασθαι τοὺς πολεμίους = to keep off (from one's self) the enemies,

ἀπώσασθαι κακό = to drive away (from one's self) ills,

καταστρέψασθαι τὴν χώραν = to subjugate (to one's self) the country,

πορίσασθαι πλοῦτον = to procure (for one's self) wealth.

Because in Greek, as in English, the context often implied unmistakably the reflexive reference, the Greeks sometimes neglected the middle as an instrument of precision, using the active voice instead of it or interchangeably with it, as (James IV. 2.)

αἰτεῖτε καὶ οὐ λαμβάνετε διότι κακῶς αἰτεῖσθε =

ye ask and receive not, because ye ask (for yourselves) amiss.

(Xen. Cyr. VII. δ.) *ἄστε, ἦν τι καὶ οὐ λέψωσι, τὰ ἑαυτῶν κλέψουσαι* = so that, if they steal anything, they shall steal their own.

d. Very frequent is the use of the middle to convey weakly the force of a possessive adjective pronoun (§. 26.) used reflexively of course. Mark the difference between

{ *λούω τὴν κεφαλήν* = I wash the head (of some one else),

{ *λούομαι τὴν κεφαλήν* = I wash my head.

{ *τὰ κρέα ἔθη ἐπὶ τὰ γόνατα* = he laid the meat on the knees (of some one else),

{ *τὰ κρέα ἔθετο ἐπὶ τὰ γόνατα* = he laid the meat on his (own) knees.

e. In the plural number, the reflexive meaning often becomes reciprocal. This commonly happens with verbs denoting intercourse of whatever kind, social, mercantile, warlike, between man and man, as

ἀσπάζονται = *ils s'embrassent* = they embrace (one another),

συντίθενται = *ils se conviennent* = they agree (with one another),

* These are examples of redundancy in language. Other examples are the addition of the article to *ταύτον* and *θάτερον*, *ἐκ Διόθεν* (Hesiod Op. 763); our own 'from whence'; and the Italian *con meco*, *con teco*, *con seco*, for the simple *meco*, *teco*, *seco*.

$\delta\alpha\lambda\epsilon\gamma\omega\tau\alpha\iota$ = *ils s'entretiennent* = they converse (with one another),
 $\mu\alpha\chi\omega\tau\alpha\iota$ = *ils se battent* = they fight (with one another),
 $\sigma\kappa\epsilon\nu\delta\omega\sigma\iota\nu$ = they pour out libations,
 $\sigma\kappa\epsilon\nu\delta\omega\tau\alpha\iota$ = they pour out libations with each other; hence, they make a treaty with each other.

Obs. 4. **Active ~ Middle.** The middle has often a meaning quite different at first sight from that of the active, but capable generally of being connected with it by tracing out the reflexive reference. For brevity's sake, the middle only is given in the following lists, but Englished so as to show clearly the meaning of the active voice.

a. *Causatives* explain themselves, as

$\alpha\lambda\sigma\chi\nu\tau\omega\mu\alpha\iota$ = I make myself ashamed = I am ashamed at,
 $\gamma\epsilon\nu\omega\mu\alpha\iota$ = I make myself taste = I taste,
 $\kappa\omega\mu\alpha\omega\mu\alpha\iota$ = I put myself to sleep = I sleep,
 $\pi\alpha\nu\omega\mu\alpha\iota$ = I make myself cease = I cease,
 $\varphi\omega\beta\epsilon\omega\mu\alpha\iota$ = I make myself afraid = I fear.

These are always causative in the active voice; but the Greeks, like the English, often use causatively verbs not causative in themselves. As the English seldom imitate the precision of the French, who always distinguish between *bâter* and *faire bâter*; so did the Greeks seldom exhibit the precision of the Romans, who usually distinguished between *facere* and *curare faciendum*. The context shows when the sense is causative, as

'Al\acute{e}xan\acute{d}ros t\acute{h}\nu p\acute{o}li\nu \kappa\alpha\tau\acute{e}\sigma\kappa\alpha\psi\epsilon\nu =

Alexander *caused* the city to be razed to the ground.

The causative use of verbs not causative in themselves is more frequent in the middle voice than in the active. Examples are

$\alpha\pi\omega\lambda\omega\mu\alpha\iota$ = I get freed for myself = I ransom,
 $\gamma\omega\alpha\phi\omega\mu\alpha\iota$ = I get the authorities to write down some one's name for me = I publicly accuse him,
 $\delta\alpha\omega\epsilon\iota\zeta\omega\mu\alpha\iota$ = I get some one to lend to me = I borrow,
 $\mu\iota\omega\theta\omega\mu\alpha\iota$ = I get some one to let something to me = I hire it,
 $\pi\omega\epsilon\sigma\beta\epsilon\omega\mu\alpha\iota$ = I get some one to be ambassador for me = I send an ambassador,
 $\tau\acute{i}\nu\omega\mu\alpha\iota$ = I make some one pay to me = I punish him,
 $\chi\omega\alpha\omega\mu\alpha\iota$ = I get a response given me = I consult an oracle,
 $\gamma\omega\mu\epsilon\omega\mu\alpha\iota$ = I let some one marry me = *nubo* = I (a woman) give myself in marriage; but in the case of a parent = I get some one to marry my child = I give my child in marriage.

b. *Subjective* middles are those which express a *mental state* or act corresponding to some outward fact or operation denoted by the active voice, as

<i>ἀγάλλομαι</i>	= I adorn myself, hence plume myself,
<i>αἰρέομαι</i>	= I take to myself, hence prefer,
<i>σρέγομαι</i>	= I stretch myself out, hence desire,
<i>ὁρίζομαι</i>	= I set my bounds, hence define,
<i>ποιέομαι*</i>	= I make for myself, hence estimate,
<i>πολιτεύομαι</i>	= I am a citizen for myself, hence act as a citizen,
<i>σκοπέομαι</i>	= I look at for myself, hence consider.

c. In many cases, the reflexive reference itself suffices, when duly considered, to explain the apparently great difference of meaning between the active voice and the middle, as

<i>ἀναμιμνήσκομαι</i>	= I remind myself = I remember,
<i>ἀπέχομαι</i>	= I keep myself off = I abstain,
<i>βουλεύομαι</i>	= I counsel myself = I deliberate,
<i>λαυθάνομαι</i>	= I escape my own notice = I forget,
<i>πείθομαι</i>	= I persuade myself = I obey,
<i>περαισσομαι</i>	= I take myself across = I cross (a river),
<i>στέλλομαι</i>	= I despatch myself = I start,
<i>φυλάσσομαι</i>	= I guard myself = I beware,
<i>αποδίδομαι</i>	= I give away for myself = I sell,
<i>μεταπέμπομαι</i>	= I send after (some one) for myself = I summon (him).
<i>{ νόμους δεῖναι</i>	= to make laws, said of the thirty tyrants,
<i>νόμους δέσθαι</i>	= to make laws (for themselves), said of the citizens,
<i>φράγομαι</i>	= I say to myself = I think.

Obs. 5. **Modern Parallels.** a. In English, the reflexive form is so awkward, requiring the use of an inharmonious dissyllabic pronoun (*myself* &c.), and often a pronoun (*from* or *for*) to boot, that it is used only when it cannot be avoided, which is seldom. Latham says that *I fear me*, used by Lord Campbell in his Lives of the Chancellors, is the fragment of an extensive system of reflexive verbs, developed in different degrees in the different Gothic languages, and in all more than in the English. (English Language §. 391.) To *bethink one's self*, to *betake one's self* are examples of the very few English verbs which can be used only as reflexives.

b. In German, French and Italian, the reflexive form, being convenient, is much used, especially to distinguish the intransitive meaning of verbs from the transitive, which is also a function of the Greek middle, as

* On the same principle perhaps, *ποιέω λόγον* = 'I compose a speech', after the analogy of *ποιέω ἄμαξαν* = 'I build a waggon', an external operation; but *ποιέομαι λόγον* = 'I deliver a speech', as if this were a more purely mental achievement.

ἡ γῆ κινεῖται

Die Erde bewegt sich
la terre se meut
la terra si muove

} = the earth moves.

In Italian, the reflexive form has also acquired the genuine passive sense, proof of which is that it is followed by the agent, as

la virtù si ama da tutti

ἡ ἀρετὴ φιλεῖται παρὰ πάντων

} = virtue is beloved by all.

c. Modern Greek supplies strong corroboration of the views given in this section. The substitution of the form in *-ω* for the older one in *-μι*, begun in classical times, has been completed in the extinction of the latter: *δίδω* is now said for *διδώμι*, *θέτω* for *τίθημι*, and so on. Even the substantive verb, rather than retain the *-μι* type, has conformed to that in *-ματι*, thus *είματι*, *είσατι* *π. τ. λ.* The *-ματι* form, though the most ancient of all, has survived, more perhaps on account of its passive than its reflexive force, which latter however has not been lost; *φιλούμεθα*, for example, is good Romaic Greek, as it was good classical, for 'we kiss one another'. The gradual substitution throughout the classical era of aorists of the passive form for aorists of the middle in deponent verbs (§. 31. Obs. 2.) has been completed by the extinction of the latter, so that now we have *ἔδεχθην* = 'I received', instead of *ἔδεξάμην*, just as in the New Testament we have *ἀπεκρίθην* = 'I answered', instead of *ἀπεκρινάμην*, which is alone classical in that sense. Farther, as often in classical Greek, so, constantly in Romaic, the perfect participle of deponents has a passive signification.

§. 32. Moods of the Verb. Moods are groups of verbal forms distinguished to the eye by terminations proper to each group, and representing to the mind the operation denoted by the verb under various *modes* or aspects. The aspects under which an event may be regarded are far more numerous than the moods of any verb (§. 1. Obs. 1.*); consequently, each mood performs more functions than one. On the other hand, the same function is sometimes performed by several moods; for between moods, as between parts of speech and between cases (§. 11. b.), there are no boundary-lines, but only boundary-territories. Each mood has its magistral or ruling function, after which usually it is named. The *Indicative* mood is so named because, though it puts

questions and even suppositions, its primary function is to *indicate* or point to what has been, is being, or is to be realised out there in the world of *facts*: and the *Subjunctive Mood* is so called, because its primary function is to *subjoin* or subordinate (to a principal statement made by the *Indicative*) what exists only in here in the world of *conceptions*, at any rate what is for the time being represented only as a *conception*. The *Optative Mood* however owes its name not at all to its primary function, but to that function which alone it retained in the decadence of the language, viz. that of expressing wishes (*optata*). In classic Greek, what is now called the *Optative Mood* was a group of truly *Subjunctive* forms used after the augmented tenses of the *Indicative*, as the forms called *Subjunctive* in grammars were used after the unaugmented tenses of the *Indicative*. Here is an illustration.

1. How to *subjoin a conception*, say an aim, to a *fact* stated by the unaugmented *Indicative*:

Αθήνησι { διατρίβει = he is living
 διατρίψει = he will live
 διατέτριψε = he has been living } at Athens,
ἵνα τὴν Ἑλλάδα γλῶσσαν ἐκμάθῃ = that he *may master*
 the Greek tongue.

2. How to *subjoin a conception*, say an aim, to a *fact* stated by the augmented *Indicative*:

Αθήνησι { διέτριβε = he was living
 διέτριψε = he lived (once)
 διετετρίψει = he had been living } at Athens,
ἵνα τὴν Ἑλλάδα γλῶσσαν ἐκμάθοι = that he *might master*
 the Greek tongue.

The *Imperative Mood* is so called, because it represents the action denoted by the verb as commanded (*imperatum*). The *Infinitive* merits its name by being unlimited (*infinitum*) not only in respect of number and person

(§. 1. Obs. 2.), but also in respect of *modal* meaning, representing the action denoted by the verb under no particular aspect, but absolutely.

§. 33. Tenses of the Indicative. To the eye, the Indicative tenses in all the three voices divide themselves into two sets, the augmented and the unaugmented. Closer inspection reveals other marks of this division into two: the termination of the 3^d person dual is in the augmented tenses -ην, in the unaugmented -ον, and, in the Indicative Middle, the terminations are distinguished as follows,

Augmented tenses Sing. -μην -σο -το 3^d Plur. -ντο,
Unaugmented tenses Sing. -μαι -σαι -ται 3^d Plur. -νται.

This difference of form answers to a difference of meaning, the augmented tenses all relating to the past, the unaugmented all to the present. The unaugmented tenses may be called Principal and Determinate: *Principal*, because from them the others are derived; *Determinate*, because, referring to the moment of speaking, a moment *determined* by the very act of speaking, they make a complete sense of themselves, without any farther specification of time.

Present γράφω = I am writing at { the present
Future γράψω = I shall write after } time.
Perfect γέγραφα = I have written before }

The augmented tenses may be called Historical and Indeterminate: *Historical*, because referring to the past;* *Indeterminate* because, the past not being, like the present, a *moment*, and a moment determined by the act of speaking, but a *space* of time, they do not make a complete sense of themselves, and require some se-

* When the present tense is used in the representation of past events (§. 34. a.), it is called the *historic* present, and takes rank with the properly historical tenses in all applications of the law for the sequence of tenses (§§. 32. 40.).

parate specification of time, expressed or understood, to *define* their reference.

Imperfect	$\xi\gamma\rho\alpha\phi\nu$	= I was writing	{ incompleted action at
Aorist	$\xi\gamma\rho\alpha\psi\alpha$	= I wrote	{ completed action in
Pluperfect	$\xi\gamma\epsilon\gamma\rho\acute{\alpha}\phi\epsilon\nu$	= I had written	{ completed action before } some past time.

The augmented tenses are derived from the unaugmented, the imperfect from the present, the aorist from the future, and the pluperfect from the perfect, and that always in the same way viz. by prefixing the augment, which is the sign of the past. The second of these formations presents a great difficulty; for it is inconceivable how the *meaning* of the aorist should have been derived from the *meaning* of the future. The temptation is great to conjecture that the future was once a present, and that while this quondam-present became astricted to the future signification, its past still remained a past.*

* The following considerations may serve to shew the feasibility of the supposition in the text. The two most necessary tenses are a present and a past. They were the only tenses in Anglo-Saxon, as they are now the only simple tenses in English; and in the older Anglo-Saxon, the present performed the functions of the future, the use of *shall* and *will* as auxiliaries being a later invention. The history of the Anglo-Saxon *substantive* verb is remarkably pertinent. It had duplicates of the present indicative viz. *am* and *beo*; and the latter of these, after being driven out of the present Indicative, as it is now in the course of being driven out of the present Subjunctive also, still retained possession of the future, the functions of which it discharged *alone* for a while, though afterwards obliged to share them with *shall* and *will*. (Latham's Eng. Lang. §. 276. Hunter's Anglo-Saxon Grammar pp. 17, 21.) Had duplicates of the present existed *generally* in the Anglo-Saxon verb, it is highly probable that one of them would have become astricted to the future, and that the aid of *shall* and *will* would never have been required. This would seem to have been the course of development in Latin verbs of the third and fourth conjugations. In Latin as in Greek, the *-ui* and *-ω* forms of the verb met, witness

§. 34. **Present Indicative.** *a.* The Greek present expresses the action or state denoted by the verb as a *process* beginning now, or if begun, as continuing now; and answers accordingly to all the forms of the English present except the emphatic, which is rendered by particles.

γράψω

= I write

= habitual or recurrent action.

inquam and *inquo*; but, whereas in Greek the old *-μι* form maintained its ground throughout the classical era as a present Indicative for a limited number of *transitive* verbs, in Latin it yielded up the present Indicative to the *-ω* form, and took refuge itself in the future Indicative and in the Subjunctive. Hence the similarity of *dicam*, *dices*, *dicet* &c. and *dicam*, *dicas*, *dicat* &c., the *-m* of the first person being the representative of the Greek *-μι*. Now this *may* have been the course of development in Greek; at some remote period *γράψω*, or what it now represents, *may* have been a rival present with *γράφω*, or with what it now represents; and in that case one can easily understand how *ἔγραψον* should have appropriated the continuative sense 'I was writing', and *ἔγραψα* the aorist sense 'I wrote'. The duplicates of the Greek perfect shewed a tendency to adopt different meanings (§. 31. b.), and in no language do coexisting lingual forms preserve a perfect equivalence. Thus in English 'I write' seldom means 'I am now writing', but generally 'I am in the habit of writing'; and 'wrote', which could once express 'I was writing', now cannot. The present in its widest acceptation includes the future, and is sometimes used for it (§. 34. a.) Some Greek futures are undoubtedly old presents, as

Fut. of *πίνω*, *πίομαι* later *πιοῦμαι*

Fut. of *ἔσθιω*, *ἔδομαι* later *ἔδοῦμαι*,

εἰμι being the most remarkable instance because paralleled exactly in English,

αὔριον εἰμι εἰς τὴν πόλιν —
to-morrow I am going into town.

The natural meaning of the aorist, viewed as a past form of the future, is potential, as *will*, *would*, *shall*, *should*; *werde*, *würde*; *aurai*, *aurais*: and this potential meaning the Greek aorist also had (§. 43. a.). It will appear less wonderful that *ἔγραψα* did not become simply potential when *γράψω* became simply future, if it be considered that every past, as such, is capable of being used potentially (Jelf §. 858, 1. 2.).

γράφω = I am writing = single incompleted action.

γράφω γε δή = I do write = emphatic form of 'I write'.

Prolonged action in the present is emphatically marked by the addition of *ἔχων*, as

τί ληρεῖς ᔁχων; = why do you keep talking nonsense?

Any space of time including the present moment, i. e. the moment of speaking, is deemed present, as the present month or year, or reign, one's whole life hitherto, even the entire duration of the existing order of things. Hence, general truths, including maxims and proverbs, are expressed in the habitual or recurrent present; though the Greeks had also a special form, φιλέω or θέλω with the infinitive, much used by Herodotus, to mark natural necessities, as (Herod. III. 82.)

ἐν δὲ δλιγαρχίῃ . . . ἔχθεα ἵδια ἰσχυρὰ φιλέει ἐγγίνεσθαι = but under an oligarchy, strong personal enmities *naturally arise*.

Hence also the admissibility, for the sake of vividness, of the present tense both in narrating past events and in predicting future ones; but this use of the present is sometimes made with un-English boldness in Greek poetry, as (Eur. Bacch. 2.)

Διόνυσος, δν τίκτει ποθ' ἡ Κάδμου κόρη = Bacchus, whom the daughter of Cadmus erewhile *bore*.

b. Two uses of the Greek present are un-English. In one, derived from the idea of *incompleted action*, it marks the *attempt* or *disposition* to do a thing, as ἀφαιρεῖς τὰ ἐμὰ κειμήλια = you are *for taking away* my jewels.

This sense is more expressly brought out by μέλλω, which is particularly common with εἰ, as

εἰ ἔμελλον τοῦτο πράξειν = If I were *for* doing that. In the other, with πάλαι or some similar word, the Greek

present is used to denote an operation that has continued up to the moment of speaking, as

πάλαι τοῦτο θεάομαι *jam pridem hoc aspicio* *je le regarde depuis longtemps* *{ = I have been looking at it for a long time.*

The full Greek form for this meaning is the rarely used compound perfect, as

πάλαι θαυμάσας ἔχω = *I have long been wondering.*

Obs. *Past Act* ~ *Present State.* *a.* Compare

Past Act

The flower *has* faded.

The man *has* fled away.

The race *has* begun.

He *has* died.

Present State

The flower *is* faded.

The man *is* fled away.

The race *is* begun.

He *is* dead.

Though each of these forms may be used for its corresponding one, the two are not equivalent; for the one carries the mind back to a past act, while the other holds up to view the permanent, still subsisting state which resulted from the past act. This distinction is marked as above in the case of all English verbs implying motion. The only Greek verb of the active form where it comes into play is

ἔγκω = *I am come*, rather than *I have come*:

similarly, the deponent

οἴχομαι = *I am gone*, rather than *I have gone*.

b. The Greek present *passive* always denotes the present *act*, and must be translated accordingly, as

ἡ οἴχια οἴχοδομεῖται } = the house is being built,
domus aedificatur } or is building,
not 'is built', which would denote the present *state*, and be rendered in both Greek and Latin by the perfect tense. Hence,

τετέλεσται = it *is* finished (lit. *has been* finished).

What betrays the tiro is, that in English one and the same present passive form expresses with some verbs the present *act*, and with others the present *state*, as

The boat is rowed (pres. *act*) by two men.

The hero is crowned (pres. *state*) with laurel.

It is all one whether we say *is rowed* or *is being rowed*, because the action of rowing does not result in a permanent state that can be described as 'rowed'; but whenever, as in the case of *crowning*, the action denoted by the verb results in a permanent state that can be described by the past participle passive of the verb, the two English forms cannot be interchanged, and are represented in Greek as follows,

τραπέξα παρατίθεται (pres.) *ἡμῖν* = } Present Action
a table is being set for us, .

τράπεξα παρατέθειται (perf.) *ἡμῖν* = } Present State resulting
a table is (lit. has been) set for us. } from past Action (§. 36.
Obs. 1.)

§. 35. Future Indicative. The Greek simple future answers to the English as interpreted by *shall* and *will*. The imperative force of these auxiliaries is expressed interrogatively by the simple Greek form, as *οὐ λαλήσεις*; = will you not speak? = you shall speak. *οὐ μὴ λαλήσεις*; = will you not not-speak? = will you not be silent? = you shall not speak.

Used positively, the Greek future expresses, like the English, politely a desire, as

φράσεις μοι = you will tell me i. e. (politely) tell me. (Od. II. 270.) *Τηλέμαχ' οὐδ' ὅπιθεν κακὸς ἔσσεαι, οὐδ' ἀνοίμων* = Henceforth, Telemachus, you will be (i. e. be you) neither cowardly nor foolish.

Particularly worthy of notice is the use of the future Indicative in an imperative sense with *ὅπως*, as if by an ellipsis of *δράτε* or some such word, as (Xen. An. I. 7.3.) *ὅπως οὖν ἔσεσθε ἄνδρες ἄξιοι τῆς ἐλευθερίας ησ πέκτησθε* = (see) that ye be men worthy of the freedom ye possess.

The only un-English use of the simple future is a very occasional one dictated by the *usus ethicus*, witness the *τί λέξεις* of Euripides, used in reference to something dreadful that has just been said, as if equivalent to *τί λέγεις* or *τί ἔλεξας*, but best represented in English by 'what would you say' or 'what do you mean to say,' both which expressions have in them a future element. The resolution of the simple future by *θέλω*, which began even in classical times, as (Herod. I. 109. 12.)

εἰ δὲ θελήσει . . . ἐξ τὴν θυγατέρα ταύτην ἀναβῆναι η τυραννίς = if the sovereignty shall devolve on this daughter,

and is the established form in Modern Greek, is rare in ancient authors, and not to be imitated.

Obs. 1. Future - Perfect. This tense marks an event as future in relation to the moment of speaking, but past in relation to some other event also future; and in its forms accordingly, both in its active form which is compound, and in its passive form which is simple, a future element and a past one are united, as

πεποιηκὼς ἔσομαι = I shall have made,
ἔργασμένος ἔσομαι = I shall have worked,
διεφθαρμένος ἔσομαι = I shall have been corrupted,
πεπράξεται = it will have been done.

But the Greeks did not care to mark the distinction of priority within the future, any more than within the past (§. 39.); and accordingly the future-perfect is little used. Not many passive verbs had the simple form, and the only instances of it in the active voice are *ἔστηξω*, *τεθνήξω*.

When the perfect of the *-μαι* form has the force of a present, the future derived from it has the force only of a simple future, as

κέκτημαι = I possess *κεκτήσομαι* = I shall possess.

In other instances also, the future-perfect has the force of a simple future, the place of which it even usurped in some verbs, as in *κόπτω*, *πανώ*, *πιπράσκω*, particularly in Attic. But instead of the future-perfect forms, Greek authors commonly used the simple future both in principal and in dependent clauses; also the aorist of the Subjunctive Group after conjunctions ending in *-αν*, and after relative pronouns with *ὅν*, the aorist Indicative being then often in the principal clause with a future-perfect meaning, as

ἐὰν ταῦτα λέξης, ἀμαρτήσῃ or *ημαρτεσ* =

if you say that, you will err, or will have erred.

No doubt *λέξης* is here used as a future-perfect, but still its proper equivalent in English is the correspondingly brief form above given. The clumsiness of the future-perfect forms in English, and even in Greek, is one reason why they are rather avoided in both languages.

Two Greek uses of this tense in its simple form are peculiar.

a. As the *perfect* passive is used to denote a permanent state in present time (§. 34. Obs. b.), so its derivative, the future-perfect passive is used to denote a permanent state in future time, as (Hes. Op. et Dies)

Ἄλλ' ἔμπης καὶ τοῖσι μεμέξεταις ἔσθλα κακοῖσιν =

But yet good will continue mixed with evil.

b. The future-perfect passive is also used to denote an immediate future, on which account it is styled *paulo-post* in grammars, as (Aristoph. Plut. 1027.)

φράξε καὶ πεπράξεται = speak, and it is done.

A periphrasis for the paulo-post future may be formed in all the voices with *μέλλω* and the infinitive, as

μέλλω γράψειν = *scripturus sum* = I am now going to write,
 but *γράψω* = *scribam* = I shall (some day) write.

Obs. 2. Greek Future Indicative ~ Latin Present and Imperfect Subjunctive (§. 40. Obs. 1. b.). In final clauses introduced by relative words, the Greek future Indicative corresponds to the only tenses of the Latin Subjunctive that mark future time, viz. the present and imperfect, as

(Xen. An. I. 3. 14.) *ἡγεμόνα αἰτεῖν Κῦρον ὅστις (ἥμας) . . . ἀποίσει* = to ask of Cyrus a guide *who shall lead us back (qui reducat)*.

(Thuc. IV. 128. 5.) *ἔπρασσεν ὅτῳ τρόπῳ τάχιστα τοῖς μὲν ξυμβήσεται, τῶν δὲ ἀπαλλάξεται* = he took measures by which he might most speedily reconcile himself to the one set, and detach himself from the other (*quomodo . . . compositionem faceret . . . dissociaretur*).

In English, a past verb in the principal clause necessitates a past verb in the dependent ones, the time in both alike being measured from the moment of speaking; but in Greek, the time of the dependent verb is measured from that of the principal one. Hence the two-fold translation of the same future, as

(*αἰτῶ ἡγεμόνα*) *ὅστις ἀποίσει* = *qui reducat* = (I ask for a guide) who shall bring back,

(*ἥτοιν ἡγεμόνα*) *ὅστις ἀποίσει* = *qui reduceret* = (I asked for a guide) who should bring back.

This use of the Greek future Indicative for the Latin Subjunctive, and its very extensive use in an Imperative sense are circumstances according with and partly accounting for the fact that in Greek the Subjunctive Group and the Imperative Mood have no future tense.

§. 36. Perfect Indicative. The Perfect Indicative is truly a Present Perfect, expressing the action or state denoted by the verb as a *process* completed within a space of time reaching up to the present, or if not completed, advancing to completion now.

The simple form,

γέγραψα = I have written, I have been writing, is sometimes expanded into another, which marks the action or state more strongly as a *process*,

θαυμάσας ἔχω = I have been wondering.

Though grammars give the same prominence to the perfect and its derivative the pluperfect as to the other tenses of the Indicative, yet the perfect and pluperfect, particularly in their active forms, are wanting in a multitude of verbs; and even when they exist, they are

sparingly used in the Indicative, and very much more sparingly in the other moods. In these respects, the Greek perfect contrasts with the English one, which exists in almost all verbs, and is most freely used. In one case only is the use of the Greek Perfect *active* indispensable, viz. when the connexion of a past event with the present is to be specially marked, most commonly by the continuance of its effects up to the present time; and for this particular purpose, the Greek perfect is used even where the English one cannot be, as of actions severed from the present in respect of time by the death of the actors: e. g. (Xen. Cyr. I. 3. 18.)

οὗτος μὲν γὰρ (sc. Astyages) τῶν ἐν Μῆδοις πάντων δεσπότην ἔστι τὸν πεποίηκεν == for Astyages made himself master of all Media.

But this un-English use of the perfect is German. "The perfect is employed (in the German historical style) to distinguish facts and deeds as having had a great and lasting effect, and as being of universal importance, as Nachdem dies in langen, schweren Kämpfen geschehen war, hat sie Julius Cæsar in ihrer Heimat aufgesucht, und in jenen Feldzügen überwunden = 'After this had been accomplished by long and severe struggles, did Julius Cæsar seek them out in their own homes, and subdue them in those campaigns'". (Weisse's Grammar p. 83.)

Obs. 1. Perfect ~ Present. *a.* When the action denoted by a verb is such that, as soon as completed, it either necessarily passes, or at any rate may pass into a permanent state, the perfect tense may be translated by a present describing the permanent state as an effect of the past action; and that not only in the passive voice (§. 34 Obs. b.), but also in the middle and active, as

δέδεμαι	= I have been bound	= I am bound,
κέκλημαι	= I have been named	= I am called,
βεβούλευμαι	= I have counselled myself	= I am determined,
σκλωλα	= I have perished	= I am undone,
τέθνηκα	= I have died	= I am dead,
τεθαύμακα*	= I have wondered	= I wonder,

* So in Italian, *ho capito* == 'I have understood' == 'I under-

οἶδα (*vidi*) = I have seen = I know,
κέκτημαι = I have acquired = I possess.

But this usage is most frequent with the perfect passive, because permanent effects are more likely to appear in the person or thing that is passive than in the person or thing that is active in any transaction. This is probably the reason why the perfect passive is seldom wanting in Greek verbs than the perfect active; and certainly whenever the present *state* is to be expressed by the passive of a transitive verb, the use of the perfect tense is indispensable (§. 34. Obs. b.).

b. The perfect, when used to convey a general truth is best translated by the present, as (Xen. Cyr. IV. 2. 26.)

Οὐδέν էστι κερδαλεώτερον τοῦ νικᾶν· ὁ γὰρ νρατῶν ἄμα πάντα συνήρπακε καὶ τοὺς ἀνδρας καὶ τὰς γυναικας =
 Nothing is more lucrative than victory; for the conqueror *carries off* — as if ‘*has ever carried off*’ — everything at once, even the men and the women.

Obs. 2. Perfect ~ Aorist. a. The tense which prevented the Greek perfect from taking possession of the extensive domain occupied by the English perfect is the Aorist, the peculiarity of which tense is that it expresses the action denoted by the verb not as a process, but as a *point*. The same object, say a cedar-pencil, according as it is looked at side-wise or end-wise, seems a *line proceeding*, or a *single point*. So the same past event may be viewed either as a process (—), or as a point (•). Now in a historical retrospect, events are looked at end-wise, unless indeed the purpose be not narration, but description (§. 37.); and as the perfect represents a past event not as a process merely, but as a process limited by connection with the present, it came to pass that, except where connexion with the present was to be specially marked, the aorist was preferred. In the following examples, although in English the perfect must be preferred to the aorist, or the aorist to the perfect, according as the understood specification of time does or does not reach up to the present, in Greek the aorist would on either supposition be preferred.

Perf.	{ 'Have you sent away the messenger? <i>Ἄρα ἀποπέπομφας τὸν ἄγγελον;</i>	I have. <i>Ἀποπέπομφα.</i>
Aor.	{ Did you send away the messenger? <i>Ἄρα ἀπέπεμψας τὸν ἄγγελον;</i>	I did. <i>Ἀπέπεμψα.</i>

stand’. In the case of verbs implying mental perceptions naturally continuous, either the present or the perfect may be used in English, as

ἀρτι μανθάνω = I just learn = I have just learned.

Perf. { Have you ever seen the Queen?
 { 'Αρα ἐώρακάς ποτε τὴν βασίλισσαν; I have.
 'Εώρακα.

Aor. { Did you ever see the Queen?
 { 'Αρα εἶδές ποτε τὴν βασίλισσαν; I did.
 Εἶδον.

The two forms are interchanged in (Ar. Nub. 238)

ΣΤΡ. . . ἵνα με διδάξῃς ὥνπερ οὐνεκ' ἐλήλυθα.

ΣΩ. Ἡ λύθες δὲ κατὰ τι; =

Strep. . . . that you may teach me those things for the sake of
 which *I have come*.

Soc. And for what *did you come*?

Here ἐλήλυθα = 'have come and now am here' = 'am come' (§. 36. Obs. 1. a.). The greater handiness of the aorist forms is another reason for their being preferred to the perfect forms.

b. It is worth noting that in Latin the perfect and aorist were represented by one and the same form. Whether the Latin perfect was formed on the model of the Greek perfect by reduplication, as *cecdi*, *tetigi*, or on the model of the Greek first aorist by the assumption of a sibilant into the final syllable of the present, as *rexī*, *scripsi*, each Latin perfect represented the Greek perfect and the Greek aorist; and the context alone shewed which of the two meanings was intended, as

Perf. ἐλήλυθα ἵν' ἵδω = *veni ut videam* =
 I have come that I may see.

Aor. ἥλθον ἵν' ἵδοιμι = *veni ut viderem* =
 I came that I might see.

The French and Greek languages present opposite phenomena in the struggle of tenses; for the French perfect is encroaching on the domain of the French aorist as far as the Greek aorist encroached on the domain of the Greek perfect: *j'ai écrit* is now commonly said where *j'écrivis* might be said.

c. Except when the English perfect cannot be used at all in translating the Greek perfect, because the time of the events is by some specification or indication severed from the present (§. 36.), the distinction between the perfect and the aorist is as faithfully observed in English as in Greek. In the following crucial passage, the English verb follows the Greek one step by step with equal power of expression (Isocr. p. 163. a.)

οἱ μὲν τοίνυν πόλεμος ἀπάντων ἡμᾶς τῶν εἰρημένων ἀπε-
 στέρηκε· καὶ γὰρ πενεστέρους πεποίηκε, καὶ πολλοὺς κιν-
 δύνους ὑπομένειν ἡγάγκασε, καὶ πρὸς τὸν Ἑλληνας
 διαβέβληκε, καὶ πάντα τρόπον τεταλαὶ πώρην ἡμᾶς
 = of all that has been mentioned then the war has deprived us;
 for it has made us poorer, and it compelled us to undergo many
 dangers, and it has set us at variance with the Greeks, and in
 every way it has made us wretched.

Each of the above perfects denotes an action such that, as soon as

completed, it was as it were transformed into a permanent effect, thus:

has deprived us, therefore we *are* deprived,
has made us poorer, - we *are* made poorer,
has set us at variance, - we *are* set at variance,
has made us wretched, - we *are* made wretched.

But *compelled* us to undergo = we *were* compelled to undergo.

§. 37. Imperfect Indicative. The Greek Imperfect expresses the action or state denoted by the verb as a *process* beginning at some past moment, or if begun, continuing at some past moment; and answers accordingly to all the forms of the English imperfect except the emphatic, which is rendered by particles:

<i>ἔγραφον</i>	= I was writing,	single incompleted action.
<i>ἔγραφον</i>	= I wrote,	habitual or recurrent action.
<i>ἔγραφόν γε δή</i>	= I did write,	emphatic form of 'I wrote'.

When denoting habitual or recurrent action, the imperfect *has* in Ionic the termination *-σκον*.

The two un-English uses of the present Indicative (§. 34. b.) belong to the imperfect also, as

(Aeschin. 3. 83.) *Ἀλόννησον ἔδιδον, δὸς δὲ ἀπηγόρευε μὴ λαμβάνειν* = (Philip) *was for giving* Halonnesus, but he (Demosthenes) would not let it be accepted.

(Il. 23. 871.) *ἔχεν πάλαι* = *had long been holding* it. Compare the French *le tenait depuis longtemps*.

A very frequent use of the imperfect, as of the present, is to *describe* past events, as (Hom.)

οἱ μὲν ἄρ' οἴνον ἔμισγον ἐνὶ κρητῆρσι καὶ ὕδωρ = Some *were mixing* wine and water in goblets.

Obs. Imperfect ~ Aorist. The imperfect of Greek verbs having no aorist, particularly of *εἰμί φημί*, is freely used in the aorist sense. Nevertheless, it is important to distinguish between the imperfect and aorist meanings, and all the more because the imperfect and aorist forms partially coincide in English, as they do wholly

in German. 'I wrote' may mean either 'I wrote habitually', or 'I wrote once for all', as

Imperfect. The Hebrews *wrote* from right to left.

Aorist. The lad *wrote* home yesterday.

The Imperfect,	The Aorist,
a <i>descriptive</i> tense,	a <i>narrative</i> tense,
marks action as	marks action as
<i>prolonged</i> ,	<i>momentary</i> ,
<i>habitual</i> ,	<i>transient</i> ,
<i>recurrent</i> .	<i>single</i> .

Toὺς μὲν οὖν πελταστὰς ἐδέξαντο οἱ βάρβαροι, καὶ ἐμάχοντο· ἐπειδὴ δὲ ἐγγὺς ἦσαν οἱ ὄπλιται, ἐτράπαντο. Καὶ οἱ μὲν πελτασταὶ εὐθὺς εἶπον τὸ διώκοντες = The barbarians then *received* the targeteers (*momentary*), and *fought away* with them (*prolonged*); but when now the hoplites were near, they *turned to flight* (*momentary*). And the targeteers immediately *followed* in pursuit (*prolonged*).

In English, various roundabout phrases are employed to bring out the peculiar force of the Greek imperfect, *used to* for what is habitual, *began to*, or *kept* with a present participle, for what is prolonged, as

Ἐπεὶ δὲ εἶδον αὐτὸν οἵπερ πρόσθεν προσεκύνοντα, καὶ τότε προσεκύνησαν = And when those saw him who formerly *used to prostrate themselves* before him, they prostrated themselves even then.

(Iph. Taur. 1306.) *ἀνωλόκνξε καὶ κατῆδε* =
she raised her voice, and *began to sing*.

It has been often pointed out that the authorised version of the N. T. would be greatly improved by marking in some such way the peculiar force of the Greek imperfect, as

(Luke 8. 23.) *κατέβη λαῖλαψ . . . καὶ συνεπληροῦντο*
κ. τ. λ. = down came a storm . . . and *they began to be filled* &c.

(John 12. 13.) *καὶ ἐξῆλθον εἰς ὑπάντησιν αὐτῷ καὶ ἔκραξον*
‘Ωσαννὰ κ. τ. λ. = and they went out to meet him, and *kept crying*, Hosanna &c.

§. 38. Aorist Indicative. The nature of the aorist has been already (§. 36. Obs. 2. §. 37. Obs.) pointed out. It represents an *end-view* as compared with the *full-length-view* of the present and imperfect tenses; and takes a retrospective *glance* as compared with the sweeping *review* of the perfect and pluperfect tenses. The word *aorist* (*ἀόριστος*) means *indefinite*, and was applied to this tense because the time to which it refers is vaguely

some past moment, *undefined* further by any connexion with the present or with any other event, as is the case with the present and perfect, and their pasts. Just because the aorist is unfettered by any understood specifications of its own, it is more often than any other tense attended by definite specifications *ab extra*, which accounts for the French calling their aorist the *passé défini*.

Obs. Aorist ~ Present. *a.* Homer's frequent use of the aorist in comparisons can be imitated, though the present would be more natural, in English, as

*"Ηριπε δ' ὡς ὅτε τις δρῦς ἤριπεν =
And he fell, as when fell some oak.*

To imagine some particular instance of an oak falling, and point to that is a highly poetic representation compared with the literally true general statement which the present tense would make.

b. Kindred to this Homeric use of the aorist is what has come to be called its iterative force marked in the Ionic dialect, as in the imperfect (§. 37.), by the termination *-σκον*. By that form of the *usus ethicus* called *λιτότης* or *μείωσις* i. e. the Greek fashion of meaning more than meets the ear, they often expressed general truths and proverbs by the aorist, *saying* that so and so happened once upon a time, but *meaning* that so and so happens frequently, as

*τὰς των φαύλων συνονοσίας ὀλίγος χρόνος διέλνεται =
a short time destroys the friendships of the bad.*

Accordingly, when the iterative aorist is used along with the present, it denotes the less frequently recurring, as it were the more distant elements of the general statement, as (Plat. Rep. VIII. 566. D.)

*'Ἄρ' οὖν εἶπον, οὐ ταῖς μὲν πρώταις ἡμέραις τε καὶ χρόνῳ, προσγελᾷ τε καὶ ἀσπάζεται πάντας ὡς ὅτε περιτυγχάνῃ, καὶ οὐτε τύραννός φησιν εἶναι, ὑποσχνεῖται τε πολλὰ καὶ ἴδιά καὶ δημοσίᾳ, χρεῶν τε ἡλευθέρωσε καὶ γῆν διένειμε δῆμῳ καὶ τοῖς περὶ ἑαυτὸν, καὶ πᾶσιν ἔλεως τε καὶ πρᾶος εἶναι προσποιεῖται; = Well then, said I, does not (a tyrant), for the first few days, smile upon and salute all, whomsoever he meets with, not calling himself sovereign at all, but making many promises both publicly and privately, yea (sometimes) releasing people from their debts and *apportioning* land to the public and to his own attendants, and (at any rate) affecting to be/raziou s /y and gentle towards all.*

c. The use in tragedy of such aorists as *ἔγέλασα*, *ῆσθην*, *ἀπέπτυσα*, *ἔδεξάμην*, used by speakers to convey their still subsisting views and feelings, is due to the *usus ethicus*, as (Soph. Phil. 1434.)

καὶ σοὶ ταῦτ' Ἀχιλλέως τένυον παρήνεσα =
and that is *my advice to you, son of Achilles.*

§. 39. Pluperfect Indicative. The Greek pluperfect expresses the action or state denoted by the verb as a process completed, or advancing to completion at some moment within a space of time not reaching up to the present.

ἔγεγράφειν = I had written, I had been writing.

This tense is exceedingly little used, especially in dependent clauses; for as within the future (§. 35. Obs. 1.), so within the past the Greeks neglected the distinction of priority, which the Romans loved to mark by the pluperfect; and, leaving the priority of one past event to another to be gathered from the context, used the aorist instead, as

*Δαρεῖος Κῦρον μεταπέμπεται ἀπὸ τῆς ἀρχῆς ἡς αὐτὸν σατράπην ἐποίησεν = Darius sends for Cyrus from the government of which *he had made him satrap.**

In phrases with *πάλαι* or the like, the Imperfect renders the English pluperfect (§. 37). Compound forms, as

εἰχον ἀνακεκομισμένοι =
they had been carrying up for themselves,

are rare, and not to be imitated. When the perfect has the sense of a present, the pluperfect has that of an imperfect, as

εἰωθα = I am wont, εἰωθεῖν = I was wont.

§. 40. Tenses of the Subjunctive Mood. The phrase Subjunctive Mood includes in this work what is called in grammars the Optative as well as what is called in grammars the Subjunctive, in so far as these are used in a truly subjunctive sense, i. e. to subjoin to a principal verb what either really is, or at any rate is, for the time being, represented as a mere *conception* (§. 32.). In other uses of them, what in grammars are called the Subjunctive and the Optative are in this work called

respectively the Subjunctive Group, and the Optative Group, or simply the Optative.

That there should exist distinct forms for denoting *fact* and *mere conception* is not in itself necessary, and languages accordingly vary both in the amount of their resources for expressing this distinction, and in the extent to which they use what resources they severally possess. Greek was in this respect inferior to Latin as, though not to the same degree as, English is inferior to French (§. 40. Obs. 1.).

a. Generally speaking, the Greek Subjunctive Mood has only two tenses, viz. the present and the aorist; for the perfects are extremely rare in the *oratio recta*, the Subjunctive Group has no future at all, and the future Optative is exclusively an *oratio obliqua* form. Notwithstanding therefore the apparent wealth of forms in the Greek Subjunctive Mood, its resources are practically limited as follows:

Subjunctive Group Present $\gamma\varrho\acute{\alpha}\varphi$ - ω - $\eta\varsigma$ - η Aorist $\gamma\varrho\acute{\alpha}\psi$ - ω - $\eta\varsigma$ - η <i>x. τ. λ.</i>	} used after the unaugmented tenses of the Indicative; also after all tenses of the Subjunctive Group, and of the Imperative Mood.

Optative Group Present $\gamma\varrho\acute{\alpha}\varphi$ - $\alpha\mu\iota$ - $\alpha\iota\varsigma$ - $\alpha\iota$ Aorist $\gamma\varrho\acute{\alpha}\psi$ - $\alpha\mu\iota$ - $\alpha\iota\varsigma$ - $\alpha\iota$ <i>x. τ. λ.</i>	} used after the augmented tenses and the <i>historic</i> present of the Indicative; also after all tenses of the Optative Group.*

For an illustration of this law for the sequence of tenses, see §. 32.

* The form of the Subjunctive Mood to be used after the Infinitive and after Participles is regulated by the finite verb whose place the Infinitive or the Participle occupies (§. 1. Obs. 5.), or by the principal verb on which the Infinitive or the Participle itself depends, i. e. by whichever of the two the Subjunctive Mood form is most intimately connected with in sense.

b. Outward signs are not wanting of the inward affinity between the Subjunctive Group and the unaugmented tenses of the Indicative on the one hand, and between the Optative Group and the augmented tenses of the Indicative on the other hand. Throughout all forms and voices of the verb, the 3^d dual in the Subjunctive Group ends, like the 3^d dual of the unaugmented Indicative tenses, in *-ov*, while the 3^d dual in the Optative Group ends, like the 3^d dual of the augmented Indicative tenses, in *-ην*. And in the *-μαι* form, the primitive and least mutilated form of the Greek verb, the inflection of the Subjunctive and Optative Groups so nearly resembles that of the unaugmented and augmented tenses of the Indicative respectively, as to provoke the conjecture, that the Subjunctive and Optative Groups together are merely an old and enfeebled Indicative. The segregation of verbal forms originally expressing coordination in thought to express subordination would be a development parallel to that through which the Greek article passed (§. 4.). It can be seen at a glance that, in the *-μαι* form of the verb, the inflection of the Subjunctive Group differed from that of the unaugmented Indicative tenses, and the inflection of the Optative Group from that of the augmented Indicative tenses — barring the augment itself, the use of which was originally very inconstant — only in the vowel-sounds of the penult or antepenult, those of the Indicative being short, and those of the Subjunctive and Optative Groups being long.

Unaugmented Indicative and
Subjunctive Group.

$\tau\acute{u}\pi\tau\frac{o}{\omega}\mu\alpha\iota$

$\tau\acute{u}\pi\tau\frac{e}{\eta}\sigma\alpha\iota$

$\tau\acute{u}\pi\tau\frac{e}{\eta}\tau\alpha\iota$

Augmented Indicative and
Optative Group.

$(\acute{\epsilon})\tau\acute{u}\pi\tau\frac{o}{\omega}\mu\eta\nu$

$(\acute{\epsilon})\tau\acute{u}\pi\tau\frac{e}{\eta}\sigma o$

$(\acute{\epsilon})\tau\acute{u}\pi\tau\frac{e}{\eta}\tau o$

Unaugmented Indicative and Subjunctive Group.

 $\tau v\pi\tau \overset{\overset{\circ}{\omega}}{\mu\varepsilon\vartheta} \omega n$ $\tau v\pi\tau \overset{\overset{\varepsilon}{\eta}}{\sigma\vartheta} \omega n$ $\tau v\pi\tau \overset{\overset{\varepsilon}{\eta}}{\sigma\vartheta} \omega n$ $\tau v\pi\tau \overset{\overset{\circ}{\omega}}{\mu\varepsilon\vartheta} \alpha$ $\tau v\pi\tau \overset{\overset{\varepsilon}{\eta}}{\sigma\vartheta} \varepsilon$ $\tau v\pi\tau \overset{\overset{\circ}{\omega}}{\nu\tau\alpha\iota}$

Augmented Indicative and Optative Group.

 $(\dot{\varepsilon})\tau v\pi\tau \overset{\overset{\circ}{\omega}}{\mu\varepsilon\vartheta} \omega n$ $(\dot{\varepsilon})\tau v\pi\tau \overset{\overset{\varepsilon}{\eta}}{\sigma\vartheta} \omega n$ $(\dot{\varepsilon})\tau v\pi\tau \overset{\overset{\varepsilon}{\eta}}{\sigma\vartheta} \eta \nu$ $(\dot{\varepsilon})\tau v\pi\tau \overset{\overset{\circ}{\omega}}{\mu\varepsilon\vartheta} \alpha$ $(\dot{\varepsilon})\tau v\pi\tau \overset{\overset{\varepsilon}{\eta}}{\sigma\vartheta} \varepsilon$ $(\dot{\varepsilon})\tau v\pi\tau \overset{\overset{\circ}{\omega}}{\nu\tau\alpha\iota}$

c. It is most important now to understand that the present and aorist forms of the Subjunctive Mood are not distinguished as *tenses* at all; for both alike refer either to the *general* present, or to the future measured from the time of the action denoted by the principal verb. They are distinguished exactly as the imperfect and aorist Indicative are distinguished (§. 37. Obs.).

Subjunctive Mood,

including Subjunctive Group and Optative Group.

Present Forms

mark action as

— *a line proceeding,*
prolonged,
habitual,
recurrent.

Aorist Forms

mark action as

• *a single point,*
momentary,
transient,
single.

The same event may be regarded under both aspects, as
 $\Delta\circ\varsigma\ \mu\omega\iota\ \tau\grave{\alpha}\varsigma\ \mu\alpha\varrho\tau\nu\varrho\grave{\alpha}\varsigma$, $\tilde{\nu}'\ \grave{\alpha}\nu\alpha\gamma\iota\gamma\nu\omega\sigma\kappa\omega$ = } full-length-
 Give me the depositions, that *I may set to and* } view of the
read them. reading.

$\Delta\circ\varsigma\ \mu\omega\iota\ \tau\grave{\alpha}\varsigma\ \mu\alpha\varrho\tau\nu\varrho\grave{\alpha}\varsigma$, $\tilde{\nu}'\ \grave{\alpha}\nu\alpha\gamma\iota\gamma\nu\tilde{\omega}$ = } end-view
 Give me the depositions, that *I may read* } of the
them. reading.

The distinction just explained is primitive* in the Greek

* By means of this distinction, Ewald explains the two

verb. Out of it the *tense*-system properly so called of the Indicative arose; and the forms of the Subjunctive Mood are to be regarded not as having lost a temporal force once possessed by them, but as never having acquired a temporal force at all. So deeply rooted was this distinction in Greek that it still survives, and has given rise to a double future in Modern Greek.

(θέλω ἵνα γράψω) = (θέλω νὰ γράψω) = θὰ γράψω —

(θέλω ἵνα γράψω) = (θέλω νὰ γράψω) = θὰ γράψω .

θὰ γράψω καθ' ἡμέραν εἰς τὸν γονεῖς } *recurrent*
μον = *I shall write daily to my parents.* } *action.*

αὔριον θὰ γράψω εἰς τὸν γονεῖς μον = } *single*
to-morrow *I shall write to my parents.* } *action.*

The same distinction appears in the French words

journée, année, = *full-length-view* of the interval,
jour, an, = *end-view* of the interval.

Obs. 1. *a. Greek Subjunctive Mood compared with the Latin.* The Latin Subjunctive has no means of marking the distinction which pervades the Greek Subjunctive Mood, viz. the distinction between the *full-length-view* and the *end-view* of an event. On the other hand, its tense-system i. e. its system of true time-forms is almost as complete as that of the Indicative; whereas the forms of the Greek Subjunctive Mood are limited to the *general* present and the future (§. 40. c.). The past is the appropriate region of facts (*facta* = things done); and to it, under the same aspect of certainty, may be added the *definite* present i. e. the present defined by the moment of speaking. Not unnaturally then the Greeks expressed conceptions relating to the definite present and to the past in the same way as

Hebrew tenses which, by the very variety of names given to them — *Preterite* and *Future*, *Perfect* and *Imperfect*, *Preterite* and *Present* — are shown not to be tenses properly at all. Ewald himself calls them *Perfect* and *Imperfect*, but in the non-temporal sense of *finished* (end-view), and *unfinished* (full-length-view); and he adds, "It might be proved that even the very developed tenses and modes of the Indo-Germanic languages might be reduced to a similar primitive distinction, just as the later Semitic languages have in this very point departed farthest from the Hebrew." (Hebr. Gram. §. 261. 1.)

they expressed facts themselves, viz. by the Indicative.* In poetry indeed, examples are found of the aorist of the Subjunctive Group answering to the Latin perfect Subjunctive, as (Soph. Oed. Col. 395.)

*γέροντα δ' ὄρθοῦν, φλαῦρον, ὃς νέος πέσῃ (qui ceciderit) =
but it is a poor thing to raise up an old man who fell when young.*

But as a rule, the Latin perfect and pluperfect Subjunctive, when the finite verb is not altogether avoided by means of participles (§. 46. a.), are rendered by the Indicative. Compare

*Νέον ξητῷ ὄστις τὴν σοφίαν ξητεῖ =
Adolescentem quaero qui sapientiam quaerat,
I am seeking a youth who is in quest of wisdom.*

*Νέον ξητῷ ὄστις τὴν Ἑλλάδα γλωσσαν ἐν μεμάθητε =
Adolescentem quaero qui Graecam linguam didicerit,
I am seeking a youth who has mastered the Greek tongue.*

*Νέον ἐξήτονν ὄστις τὴν Ἑλλάδα γλωσσαν ἐξέμαθε =
Adolescentem quaerebam qui Graecam linguam didicisset,
I was seeking a youth who had mastered the Greek tongue.*

b. Even that half of the Latin Subjunctive to which the Greek Subjunctive Mood answers on the whole is not completely covered by it, a considerable portion of the work being done in Greek by the future Indicative (§. 35. Obs. 2.). Noteworthy however is a peculiar use of the aorist Optative in temporal and relative clauses, the sole subjunctive use indeed made of it in such clauses. When the principal verb denotes recurrent action by being in the aorist Indicative with *πολλάκις*, or in the imperfect Indicative, corresponding recurrence is subjoined by the aorist Optative, called in this case the Optative of *indefinite frequency*, the Optative clause being introduced by a relative word, by a temporal conjunction not ending in *-αν*, or by *εἰ* = 'as often as'.

*ἐπραττεν ἀδόξει εν αὐτῷ { = he did (each) time what seemed
agebat quae sibi viderentur } = good to him.*

If the principal verb denoting recurrent action be in an unaugmented tense, corresponding recurrence is subjoined by the aorist of the Subjunctive Group introduced by a relative word with *ἄν*, by a temporal conjunction ending in *-αν*, or by *ἐάν* = 'as often as'.

*πράττει ἀν δόξη αὐτῷ { = he does (each time) what
agit quae sibi videantur } = seems good to him.*

Obs. 2. Subjunctive Group forms used for Optative forms. The law for the sequence of tenses (§. 40. a.) is not much regarded in Homer.

* How in negative clauses this deficiency of the Greek Subjunctive is, as it were, recouped, see §. 48. Obs. 1.

a. The occurrence of an Optative form after an unaugmented tense is ingeniously accounted for by supposing the sudden emergence of a past element into the mental view of the poet, as (Aristoph. Ran. 24.)

τοῦτον δ' ὄχω, ἵνα μὴ ταλαιπωροῖτο μηδ' ἀχθος φέροι = but I let this fellow ride that he *may not be distressed* or *carry* a burden = but I let this fellow ride lest he *should be distressed* or *carry* a burden.

The Optatives *ταλαιπωροῖτο*, *φέροι*, which are exactly represented in the second form of the English, are due to the emergence into the mental view of the writer of a conditional sentence which would be expressed by *past* tenses thus:

τοῦτον εἰ μὴ ὠχούν, ἐταλαιπωρεῖτο ἀν =
if I did not let this fellow ride, he would be distressed.

The historians, especially Thucydides, seem often to have thrown themselves so completely into the past events which they recorded, that these events became as present to them, and hence a form of the Subjunctive Group follows a historic tense. Sometimes indeed forms from both Groups occur in a clause dependent on the same historical tense, as (Thuc. III. 22. 8.)

ὅπως ἀσαφῆ τὰ σημεῖα . . . τοῖς πολεμοῖς ἦ, καὶ μὴ βοηθοῖεν = that the signals *might be unintelligible* to the enemy, and that they (the enemy) *might not bring succour*.

In such examples, the Subjunctive Group form often expresses the more immediate or more certain contingency, and the Optative Group form the more remote or more uncertain contingency. Apart however from the cases where some such explanation may apply, there are thousands where it must simply be admitted that forms of the Subjunctive Group are used where those of the Optative, according to the law for the sequence of tenses, ought to be. The negligence with which the distinction was observed even by Attic writers, and the eagerness with which critics have maintained it have conspired to multiply the various readings, an Optative form having been often substituted for one of the Subjunctive Group in the Codex, because it was supposed that the author must have written according to rule.

b. In post-Attic Greek, the Subjunctive Group made gradual encroachments, till at length the Optative in its subjunctive uses altogether disappeared.* In the Septuagint and Apocrypha, the

* A similar process is going on at the present day in the French language, the present Subjunctive, which answers to the Subjunctive Group in Greek, threatening to supplant the past Subjunctive which answers to the Optative Group. Such sounds as *que nous marchassions* displease the Parisian ear; and

substitution of the Subjunctive Group for the Optative in dependent clauses is common; in the New Testament it is universal; and even in Plutarch, whose style was not that of the people, it prevails. So early therefore as the first century, the Optative forms, so far as the living language of the people was concerned, were *in articulo mortis*, and the few formulæ in which the Optative now appears in Modern Greek, such as the $\mu\eta\gamma\epsilon\nu\omega\tau\omega$ of the N. T., are merely the coffins of the dead Optative. The historical explanation of this decease is a fine example of the important part played by mere sound in determining the forms of language. In the time of Julius Cæsar, the diphthong $o\iota$ characteristic of the Optative was pronounced as *ee* in the English word *see* (Blackie on the pronunciation of Greek p. 35.), and then too, or not long after, the η characteristic of the Subjunctive Group, came to be similarly pronounced. By this coincidence in sound, one half of the forms in the two Groups could no longer be distinguished by the ear: hence they came to be confounded, first in conversation, and then in written composition. But a long period of approximation must have preceded the actual coalescing of the $o\iota$ and η sounds; and accordingly, before the Subjunctive Group altogether supplanted the Optative, there was a long period in which it continually, and ever more and more rapidly, encroached on the domain of the Optative.

Obs. 3. May and Might. When these auxiliaries have a truly Subjunctive meaning, which they have in final clauses always, and in relative clauses often, they are to be rendered by a Subjunctive Mood form (§. 32.), or by one of its Greek equivalents (§. 35. Obs. 2.). When however *may*, *might* imply *permission* or *power*, they are rendered by Greek verbs of corresponding signification, as $\xi\xi\epsilon\sigma\tau\iota$ = 'it is allowed'; $\xi\nu\epsilon\sigma\tau\iota$ = 'it is possible'; $\delta\nu\nu\alpha\mu\alpha\iota$, $o\lambda\sigma\tau\epsilon\iota\mu\iota$ = 'I am able':
 $\xi\xi\epsilon\sigma\tau\iota\sigma\iota\lambda\epsilon\gamma\epsilon\iota\nu$, $\epsilon\iota\beta\alpha\mu\lambda\epsilon\iota$ = you *may* speak, if you like.
 $\xi\xi\eta\nu\sigma\iota\lambda\epsilon\gamma\epsilon\iota\nu$, $\epsilon\iota\beta\alpha\mu\lambda\lambda\sigma\iota$ = you *might* have spoken, if you liked.

§. 41. Subjunctive Group used Absolutely. a. In the Epic writers and in the tragedians, forms of the Sub-

the only person of the Past Subjunctive still heard in Parisian conversation is the third, *qu'il marchât*, where the sibilants are wanting. In the south of France, where the neighbourhood of the Italian *bocca larga* exerts an influence, the Past Subjunctive is still in use; but, from the literary sovereignty of the capital, there is every probability of the Past Subjunctive disappearing from the French verb, as the Optative has disappeared from the Greek one.

junctive Group, often accompanied by *κέ*, occur in the sense of the future Indicative, as (Il. I. 262.)

οὐ γάρ πω τολούς ἴδον ἀνέρας, οὐδὲ ἴδωμαί =
for I never saw such men, nor *shall I see* them.

So in all writers the aorist subjunctive with *οὐ μή* (§. 48. Obs. 4. d.), as

οὐ μή κρατηθῶστε ποιεῖν τι ὡν μή χρή ποιεῖν =

No: I *shall not be forced* to do anything that ought not to be done.

Compare *Οὐ σοι μή μεθέψομαί ποτε =* No: I *shall never follow* thee.

b. Akin to the simply future meaning is that called *deliberative*, to express which forms of the Subjunctive Group are again interchanged with the future Indicative, as (Eur. Ion. 758.)

εἴπωμεν, ή σιγῶμεν, ή τί δράσομεν; = shall we speak, or shall we be silent, or what shall we do?

c. Still akin to the future meaning, is the *imperative* force of the Subjunctive Group. The first person, particularly the first person singular, was often introduced by *ἴθι*, *ἄγε*, *φέρε*, *εἰπέ*, *ἴδε*, which, though Imperative in form, are interjectional in force, and accordingly decline all concord:

ἴωμεν ἔκεισε ἴν' ἴδωμεν =

let us go there that we may see.

φέρε δὴ τὰς μαρτυρίας ὑμῖν ἀναγνῶ =

come now, *let me read* to you the depositions.

In the second and third persons, only the aorist is used imperatively, and that with *μή* (§. 44. a.), as

μηδενὶ συμφορὰν ὀνειδίσης =

reproach no one with misfortune.

§. 42. Optative Group* used Absolutely. a. Optative forms also are sometimes *deliberative*, but they express

* For the use of the Optative Group in the *oratio obliqua*, see §. 96.

greater perplexity than forms of the Subjunctive Group so used, as

ποῖ τις φύγη; = whither shall one flee?

ποῖ τις φύγοι; = whither should one flee?

b. Optative forms express command politely, and are interchanged with the Imperative Mood, as (Xen. An. III. 2. 37.)

εἰ μὲν οὖν ἄλλος τις βέλτιον ὁρᾷ, ἄλλως ἐχέτω· εἰ δὲ μὴ, Χειρίσοφος μὲν ἥγοιτο =

if then any other person know better, *let it be otherwise*; but if not, *let Chirisophos be leader*.

c. In other languages besides Greek, the past forms of the Subjunctive Mood are used to express wishes, as in Italian

Oh, avessi danaro! = Oh, that I had money!

Volessa Iddio! = (Plût à Dieu!) = Would to God!

The *optative* force of the Greek Optative is confined to wishes which contemplate the present or future, wishes therefore capable of fulfilment so far as the time contemplated goes, as

ὦ παῖ, γένοιο πατρὸς εὐτυχέστερος =

O boy, *may'st thou be more fortunate than thy father!*

εἴθε δὲ νίδις νενικήκοι = Would that my son *had conquered!* i. e. Would that the time, still future, were come when I could say he had conquered!

Obs. **Impossible Wishes.** A wish regarding the past, and therefore impossible of fulfilment, is expressed by the imperfect or aorist indicative, or by *ὠφελον* (Epic. *ὄφελον*) = 'I ought' with the aorist Infinitive, as

εἴθε σοὶ τότε ἐγενόμην = oh, that I had then been with thee!

ὢλεσθαι ὠφελον τῇδ' ἡμέρᾳ = would I had perished this day!

An impossible wish regarding the present is expressed by *ὠφελον* with the *present* Infinitive, as (Il. I. 415.)

αἴδε' ὄφελες παρὰ νηνσὶν ἀδάκρυτος καὶ ἀπήμων ἡσθαι = oh, that you were (now) sitting beside the ships without a tear and without a wrong!

Wishes possible and impossible are often introduced by *εἰ*, *εἴθε* (Hom. *αἴ*, *αἴθε*), *εἰ γὰρ*, *ὦς*.

§. 43. **Potential Forms of the Finite Verb.** *a.* The augmented tenses of the Indicative unaccompanied by any potential sign are used potentially, and are the proper forms for the potential meaning when irony is to be expressed. This use of the Indicative cannot always be imitated in English, as

τίς μοι φύλαξ ἡν, εἰ σὺ συμφορᾶς τύχοις; = who *would be my protector, if you met with a misfortune?*

The imperfects expressing *necessity* or *duty*,

ἔδει = it *would be necessary*,

ἔχοην = it *would be dutiful*,

εἰκὸς ἡν = it *would be reasonable*,

may be here mentioned. These however may have originated, like the Latin *debebas*, in a reference to duty *neglected*, though of course still binding. Whether truly potential or not, these imperfects used of *present necessity* or *duty* illustrate the *usus ethicus*. In poetry, Optative forms also are used potentially without any potential sign, as (Moschus I. 6.)

Ἐν εἴκοσι πᾶσι μάθοις νιν =

among whole twenty you would know him.

b. Generally however, especially in prose, both the augmented * tenses of the Indicative and all Optative forms when used potentially are accompanied by *ἄν*, in Epic by *κέ κά*, as potential signs. "*Ἄν* has been supposed to be cognate with *ἄνα*, *κέ*, *κά* with *κατά*, both in the sense of 'according to'; and this derivation agrees with their force, which is to represent the operation denoted by the verb with which they are joined as taking place or not *according as* certain conditions, expressed or understood, are fulfilled or not, as (Plat. Gorg. p. 516. E.)

* The Epic *κέ* is often found with the future indicative; but it is doubtful whether *ἄν* is ever found with the future indicative in Attic.

εἰ ήσαν ἄνδρες ἀγαθοὶ, οὐκ ἂν ποτε ταῦτα ἔπασχον =
 if they were good men, they *would never be suffering*
 thus, as if '*in that case they suffered not thus*'.

The usual potential forms of the finite verb are the following:

1. Indicative Forms used only in connexion with a condition expressed or understood (§. 93.):

ξέδιδων ἂν = { I should give (single or recurrent action),
ξέδωκα ἂν = { I should have given (recurrent action),
 I should have given (single action).

2. Optative Forms used absolutely, as well as in connexion with a condition expressed or understood:

διδοίην ἂν = I should give (recurrent action),
δοίην ἂν = I should give (single action).

Here are examples of the Potential Optative used absolutely:

τοῦτο γένοιτ' ἂν = this might be,
οὐκ ἂν γένοιτο τοῦτο = this couldn't be,
ταῦτα εἴποι τις ἂν = one would say so.

Obs. **Potential = Polite Indicative.** Forms that can be used *absolutely* are for that very reason allied to the Indicative. Accordingly, the absolute potential forms often differ from the Indicative merely by giving a modest or polite turn to the expression; for which reason it is that they are preferred in the expression of one's own views and feelings, and in addressing others, as

ἡδέως ἂν θεασαίμην τὴν Ἀκρόπολιν =
I should like to see the Acropolis.

βονλοίμην ἂν σὲ ἐρωτᾶν τι =
I should like to ask you something.

οὐκ ἂν φεύγοις = you wouldn't escape i. e. you sha'n't.
Ἄρα ἐθελήσειεν ἂν Γοργίας ἡμῖν διαλεχθῆναι; =
Would Gorgias desire to converse with us?

§. 44. Tenses of the Imperative Mood. *a.* The present and aorist forms are alone in general use; and, as all commands regard the future, the distinction between these forms is not one of time, but the same as in the Subjunctive Mood (§. 40. c.), as

λαβὲ τὰς μαρτυρίας καὶ ἀναγίγνωσκε —
take the depositions and set about reading them,
λαβὲ τὰς μαρτυρίας καὶ ἀνάγνωσθι —
take the depositions and read them.

The *taking* is momentary in its own nature, and therefore expressed by the aorist in both cases: the *reading* is represented as a process in *ἀναγίγνωσκε*, as a single action in *ἀνάγνωσθι*. In prohibitions with *μή*, the aorist of the Subjunctive Group is used instead of the aorist Imperative, which however is sometimes found in the 3^d person with *μή*, hardly ever in the 2^d.

μὴ ἐρέθιξε φίλον ἀνδρα — } a prohibition of either beginning
don't provoke your friend, } or continuing to provoke.
μὴ ἐρεθίσῃς φίλον ἀνδρα — } a prohibition only of beginning
don't provoke your friend, } to provoke.

b. The perfect Imperative denotes impatience and the continuance in itself or in its effects of what is commanded. Its use however is confined in the active voice to a very few perfects, mostly second perfects, with a present meaning; and in the passive voice, the 3^d person is the only one often found.

aorist *βούλευσαι* = determine.

perf. *βεβούλευσο* = be determined.

ταῦτα ἡμῖν λελέχθω = let these things have been said, by us i. e. let them remain as they have been said.

κεκλείσθω ἡ θύρα = let the door be kept shut.

τεθναθι lie dead. *βεβηκέτω* = let him be gone.

c. In a very few instances, the Imperative is used in dependence on relative words, instead of the future Indicative. Compare the Attic formula

οἶσθ' οὖν δὸς ἀράσον; = do you know then what to do? with (Eur. Cycl. 131)

οἶσθ' οὖν δὸς ἀράσεις ὡς ἀπαλρωμεν χθονός; = do you know then what to do, that we may leave the country? and with (Herod. I. 89.)

κάτισον . . . φυλάκους, οἱ λεγόντων κ. τ. λ. =
set guards, who *shall say* &c.

The Attic formula above cited, and the similar ones
 οἶσθ' οὖν ὡς ποιῆσον; =
 do you know then how to manage?
 οἶσθ' οὖν ᾧ μοι γενέσθω; =
 do you know then what's to happen me?

are examples of *oratio variata* i. e. the principle of their structure at the beginning is afterwards abandoned for a totally different one. A more simple illustration of *oratio variata* is furnished by ὕστε with the imperative instead of the infinitive, as (Soph. El. 1171)

Θυητοῦ πέφυκας πατρὸς, Ἡλέκτρα, φρόνει, Θυητὸς δ'
 Ὁρέστης, ὕστε μὴ λίαν στένε = consider, Electra,
 thou art sprung from a mortal father, and Orestes
 proved mortal, *so then grieve not overmuch*.

The regular construction would have been ὕστε μὴ λίαν
 στένειν = 'so as not to grieve overmuch.'

§. 45. Tenses of the Infinitive. The future Infinitive is always a tense i. e. a time-form; only the futurity it expresses is measured, not from the moment of speaking, as in the Indicative (§. 33.), but, as in the Subjunctive (§. 40. c.), from the time of the action denoted by the principal verb. The other so-called tenses of the Infinitive may relate to any time, and are distinguished as in the Subjunctive Mood (§. 40. c.). A common illustration of their respective peculiarities under one aspect is the following:

πρὶν δειπνεῖν = before beginning supper —
 πρὶν δειπνῆσαι = before supping .
 πρὶν δεδειπνηκέναι = before finishing supper —

a. After *verba declarandi et sentiendi* however, all the tenses of the Infinitive are time-forms, and make clauses (§. 1. Obs. 5.), each tense of the Infinitive answering to its namesake in the Indicative, and admitting of a twofold translation into English according

as it depends on an augmented or unaugmented tense, as

οὐ φασὶ τὰς ναῦς παρεῖναι =

they deny the ships *are there*.

οὐκ ἔφασαν τὰς ναῦς παρεῖναι =

they denied the ships *were there*.

τοὺς στρατιώτας ἥξειν νομίζουσιν =

they think the soldiers *will come*.

τοὺς στρατιώτας ἥξειν ἐνόμιζον =

they thought the soldiers *would come*.

δμολογεῖ κεκομίσθαι τὴν προῖκα =

he acknowledges he *has received* the dowry.

ἀμολόγει κεκομίσθαι τὴν προῖκα =

he acknowledged he *had received* the dowry.

The aorist alone may be translated by the same English form in both cases, as

τίς λέγει Ἐπύαξαν Κύρῳ δοῦναι πολλὰ χρήματα; =

who says Epyaxa gave Cyrus much money?

ἐγὼ ἔλεξα Ἐπύαξαν Κύρῳ δοῦναι πολλὰ χρήματα =

I said that Epyaxa gave Cyrus much money.

But *gave* in the second case has the force of *had given*, because Epyaxa's giving was prior to Xenophon's writing, itself a past event.

b. When however the principal verb, even though a verb *declarandi vel sentiendi*, has such a meaning that only future time can be in view, the tenses of the dependent Infinitive, the future always excepted, cease to be time-forms and are distinguished as in the Subjunctive Mood (§. 40. c.). Such verbs are those of which the meaning is more or less *imperative*, as verbs of *willing*, *praying*, *persuading*, *ordering*, and their opposites; even verbs of *intending*, *hoping*, *promising*, *swearing*. After all these, the future infinitive is correct; after verbs of *hoping* and *promising* especially, it is the most common. But the other tenses of the Infinitive are also found;

and they are then distinguished as in the Subjunctive Mood (§. 40. c.).

συμβουλεύω σοι σωφρονεῖν = } habitual action.
 I advise you *to be discreet*, }
δέομαί σου ἐλθεῖν = I beg you *to come*, (single action).
δέοματος = the sick man claims to } of the action
οὐσήματος = the sick man claims to } in its effects.
 (Il. IX. 608.) *φρονέω δὲ τετιμῆσθαι* = } permanence of
 and I hope *to be honoured*, } the action itself.

The tenses of the Infinitive thus used achronically don't form clauses, and though without the article are to be regarded as substantives: *σωφρονεῖν* = 'discretion'; *ἐλθεῖν* = 'arrival'; *ἀπηλλάγθαι* = 'deliverance'; *τετιμῆσθαι* = 'ascriptions of honour' (§. 6. Obs. 1. b.).

Obs. 1. Potential Infinitive. The Infinitive, when its meaning is potential, becomes, what in itself it is not (§. 32.), a *mood* properly so called; and in this sense, all its tenses, excepting the future, are accompanied by the potential *ἄν*, each tense of the Infinitive representing its namesake of the finite form. The potential Infinitive is indispensable to the rendering of conditional sentences in the *oratio obliqua* (§. 97.).

Obs. 2. Elliptical Infinitive. The Infinitive, expressing as it does the meaning of the verb absolutely (§. 32.), is fitly employed, with the ellipsis of a principal verb easily supplied, in utterances of feeling, e. g.

a. Of perplexity (§. 41. b.), as (Herod. I. 88.)

ὦ βασιλεῦ, κότερον λέγειν πρὸς οἳ τὰ νοέων τυγχάνω, ηγεῖν ἐν τῷ παρεόντι χρόνῳ = O king, whether *to say* to you what happens to be in my mind, or *to be silent* for the present, as if *οὐκ οἶδα* = 'I know not' were mentally added.

b. Of wish, with *αἴ γάρ* or *εἴθε* (Od. VII. 311.), as if *ἴφελον -εις -ε* were understood. But this use of the Infinitive is peculiar to the *Odyssey*.

c. Of prayer, as

μή με δουλεῖας τυχεῖν = (grant that) I be not enslaved!

d. Of command, in the 2^d person, and more anciently in the 3^d also. The Infinitive is even interchanged with the Imperative, as (Il. III. 280—284.)

If on the one hand Alexander slay Menelaus,
 αὐτὸς ἔπειθ' Ἐλένην ἐχέτω — then let him keep Helen;
 if on the other hand Menelaus slay Alexander,
 Τρῶας ἔπειθ' Ἐλένην ἀποδοῦναι —
 then let the Trojans restore Helen.

The Italians make a like use of their Infinitive, but only in the 2d pers. sing. and negatively, as

non temere — don't fear } all explained by
non dir questo — don't say this } *devi* — 'thou oughtest'
non credere cio — don't believe that } understood.

e. Of necessity or duty, in reference to all the three persons, *δεῖ* or *χρή* being understood, as (Herod. VIII. 109.)

νῦν μὲν ἐν τῇ Ἑλλάδι καταμείναντες ἡμέαν τε αὐτέων ἐπι-
 μεληθῆναι καὶ τῶν οἰκετῶν — now then having settled in
 Greece we must take care of ourselves and of our domestics.

Obs. 3. **Adverbial Infinitive.** The Infinitive appears in a number of adverbial phrases, which are not without parallels in English e. g. 'to be sure' — 'surely'; 'to be doing with' — 'for the present.'

ἔχων εἰναι — willingly (almost always with a negative).

κατὰ τοῦτο εἰναι — in this respect, ὀλίγον δεῖν — almost.

A relative word often introduces such Infinitives, as

ὅσον γέ μ' εἰδέναι — ὅτι μ' εἰδέναι — as far as I know.

With Herodotus, ὡς is the favourite form of the introductory relative, as

ώς εἰπεῖν = ὡς ἔπος εἰπεῖν = so to say,
 ὡς γέ μοι δοκεῖν = as it seems to me at least,
 ὡς μὲν ἐμὲ συμβαλλεόμενον εὑρίσκειν =
 as I at least on consideration find.

§. 46. Participial Tenses. a. In grammars, participles are included in, or appended to the Infinitive, because they too are *unlimited* (*infinita* §. 32.) as compared with the finite verb, their forms being confined to no particular person, though confined to one number. Participles are tenses with the same limitation as in the Subjunctive Mood (§. 40. c.), and in the Infinitive (§. 45.), viz. that the past, present, and future denoted by them are measured not from the moment of speaking, but from the time of the action denoted by the principal verb. Thus,

Participles denote

Aorist, } the priority Perfect, } the simultaneity Present, the simultaneity Future, the posteriority of one event in relation to another, no matter whether both be in past, in present, or in future time.

ἀποθνήσκων ἔλεξε τοιάδε =

when dying, he spoke as follows.

ἀποθνήσκων λέγει τοιάδε =

when dying, he speaks as follows.

ἀποθνήσκων λέξει τοιάδε =

when dying, he will speak as follows.

The temporal force of the future participle is most marked. The temporal distinction between the present and aorist participles arises immediately out of that fundamental distinction which alone makes them to differ in the Subjunctive (§. 40. c.). The aorist does the work of the perfect participle, except when the action is of the kind pointed out in §. 36. Obs. 1. a., or when the continuance of an action in its effects is to be specially marked. The possession by the Greek verb of an active participle denoting priority, a kind of participle which only deponents among Latin verbs possessed, compensates to a considerable extent for the want of finite forms answering to the Perfect and Pluperfect of the Latin Subjunctive (§. 40. Obs. 1. a.), as may be seen by the following examples.

Καθ' ἡμέραν, ταῦτα λέξας, ἀπέργεται οἴκονδε =

Quotidie, *quum* haec *dixerit*, abit domum =

Day by day, *having said* (*when he has said*) this, he goes home.

Χθὲς, ταῦτα λέξας, ἀπῆλθεν οἴκονδε =

Heri, *quum* haec *dixisset*, abiit domum =

Yesterday, *having said* (*when he had said*) this, he went home.

Farther, where we use two finite verbs to express two actions in immediate sequence, the Greeks used only one, expressing the antecedent action by an aorist part-

inciple active, as the Romans did by a perfect participle passive, as

ἔλαν τὴν πόλιν πατεστρέψατο ==

urbem captam evertit ==

he took and destroyed the city.

The temporal force of participles is often emphasized by adverbs; *ἄμα*, *μεταξύ* marking simultaneity; *αὐτίκα*, *εὐθύς* immediate sequence, as

of "Ελλῆνες ἐμάχοντο ἀμα πορευόμενοι ==

the Greeks fought *while* marching.

τῷ δεξιῷ κέρα εὐθὺς ἀποβεβηκότι ἐπέκειντο ==

they pressed on the right wing immediately on
its landing.

The following participles are used in the sense of temporal adverbs:

ἀρχόμενος == at first, τελευτῶν == at last,

διελιπόν χρόνον == after some time.

b. Not only does the Greek language possess a complete set of participles, but it makes a far more abundant and varied use of them than did the Latin language. The Greek participles, apart from the genitive absolute (§. 64.), are extensively used to denote, besides time, *manner*, *means*, *instrument*, *accompaniment*, *purpose*, *cause*, *condition*, and *concession*.

Manner, as

γελῶν εἶπε == he said *laughing*.

ἀνύσας ἀνοιγε == open *quickly*.

λέγε φθάσας == speak *at once*.

With verbs of *motion* or *change*, φέρων and sometimes φερόμενος denote precipitation or vehemence, as

εἰς ταῦτα φέρων περιέστησε τὰ πράγματα ==

to that he *went and brought* our affairs.

Means, by the present participle, as

ληξόμενοι ζῶσιν == they live *by plunder*.

Instrument, by χρώμενος == 'using', as

πολλῇ τέχνῃ χρώμενος τοὺς πολεμίους ἐνίκησεν ==

with much skill he conquered the enemy.

Accompaniment, by means of *ἔχων*, *λαβών*, *φέρων*, *ἄγων*, the first two being used of both animate and inanimate things, *ἄγων* only of animate, *φέρων* only of inanimate, as

ὤφθη ἔιφος ἔχων == he was seen *with* a sword.

Purpose, by the future participle, as in Latin, as

οἵ δὲ μετήσαν ἄξοντες == and they went after *to fetch* him.

In poetry, sometimes by the present participle also, because the present by denoting incompleted action often marks only the attempt to do a thing (§. 34. b.), as (Eur. Suppl. 154.)

ταῦτ' ἔκδικάζων ἥλθον == I went *to avenge* this wrong.

Cause, by all the participles, the actor's own view or statement of the cause of his action being often introduced by *ώς*, *ὡσπερ*, called on that account *subjective*, while the narrator's view or statement of the cause in another person is often introduced by *ἄτε*, *ἄτε δῆ*, called on that account *objective*, as

ἡμεῖς πάντες ἐβλέπομεν πρὸς αὐτὸν ὡς αὐτίκα μάλα ἀκούσομενοι θαυμασίους τινὰς λόγους == we all looked towards him *as about to hear* i. e. *in the notion we should hear* immediately some wonderful discourse.

ὁ Κῦρος, ἄτε παῖς ὡν, ἥδετο τοῖς τοιούτοις ==

Cyrus, *as being* a boy, was pleased with such things.

Inasmuch as the cause precedes the effect, a past participle is oftener used than a present to denote even those mental states which naturally continue after giving rise to action; but such past participles are best translated into English by the present, as *δείσας* == 'fearing', *νομίσας* == 'thinking'. Here belong two idiomatic phrases, both used in the way of censure

τί μαθών; == from what information?

τί παθών; == under what impulse?

Condition, by all the participles, as (Thuc. IV. 18.)

καὶ ἐλάχιστ' ἀνοίκοις πταλοντες... παταλύοιντο == and such would least of all, *should they fail*, end the war.

Concession, by all the participles, frequently with *καὶ* . . . *περ*, as

οἱ δὲ καὶ ἀχνύμενοί περ ἐπ' αὐτῷ ἥδι γέλασσαν = and grieved though they were, they laughed heartily at him.

c. Moreover, the Greek participles become potential with *ἄν*, excepting, as in the Infinitive Mood (§. 45. Obs. 1.), the future, as

Φίλιππος Ποτιδαιαν ἔλαβεν, καὶ δυνηθεὶς ἄν αὐτὸς ἔχειν, Ολυνθίοις παρέδωκεν = Philip, after taking Potidaea, and *when he might have kept it himself, handed it over to the Olynthians.*

ἔγώ εἰμι τῶν ἥδεως ἄν ἐλεγχθέντων =

I am of those *who would gladly be convinced.*

d. By an idiom peculiarly Greek, the participle agreeing with the subject of the finite verb sometimes contains the principal idea, in which case the finite verb is best translated by an adverb. This happens especially when the finite verb is *τυγχάνω*, *λανθάνω*, or *φθάνω*, as

ώς δὲ ἦλθον, ἔτυχεν ἀπιών =

when I came, he *was just going away.*

ταῦτα ποιήσας, ἔλαθεν ὑπεκφυγών =

having done this, *he got off unobserved.*

ἔφθασα* αὐτὸν παρελθών =

I *came up earlier than he did.*

οὐκ ἄν φθάνοις λέγων; = won't you *say at once?*

οὐκ ἔφθημεν ἐλθόντες καὶ νόσοις ἐλήφθημεν =

we no sooner *came than we were taken ill.*

* The construction of *λανθάνειν* and *φθάνειν* is sometimes reversed, their *participles* being used in an adverbial sense. In the case of *λανθάνω* however it must be noted that whereas

ποιῶ τι λανθάνων = I do something unobserved; on the other hand,

λανθάνω τι ποιῶν = I do something unobserved, or unconsciously i. e. I do something concealed from others, or concealed from myself.

Obs. Participles ~ Infinitive. *a.* Great compactness and precision of style is obtained in Greek by incorporating with *verba declarandi et sentiendi* under the participial form what is really a clause. Compare with the examples in §. 1. Obs. 5,

ἐπήγγειλε ὅτι οἱ πολέμιοι ἀποφύγοιεν. } He announced
ἐπήγγειλε τοὺς πολεμίους ἀποφυγεῖν } that the enemy
ἐπήγγειλε τοὺς πολεμίους ἀποφυγόντας } had fled.

The incorporation by the participle is not more compact than by the Infinitive, but it is more precise, because the participle and its noun have corresponding terminations. When, as in the above instance, the two propositions incorporated have different subjects, the participle is put in whatever case the principal verb may require, witness

ἡσθόμην αὐτῶν οἰομένων εἶναι σοφωτάτων =

I perceived they thought themselves very wise.

οὐδέποτε μετεμέλησέ μοι σιγήσαντι, φθεγξαμένῳ δὲ πολλάκις = I never repented of being silent, but often of having spoken.

When a reflexive pronoun accompanies the verb, the participle may agree either with it or with the subject of the verb, as

ἴαντὸν οὐδεὶς ὁμολογεῖ πακοῦργον ὄντα (πακοῦργος ὡς) =
 no one acknowledges himself to be wicked.

b. A similar substitution of a participle for the Infinitive takes place with verbs denoting *commencement, continuance, being right, rejoicing, excelling* and their opposites; and, as these verbs are appositional, the participle agrees with their subject, as it also always does with the subject of *verba declarandi et sentiendi* in the passive voice, as

ἐπηγγέλθησαν οἱ πολέμιοι ἀποφυγόντες =
 the enemy were reported to have fled.

δειχθήσομαι ποιήσας τι =

I shall be shewn to have done something.

διατελεῖ με ἀγαπῶν = he continues to love me.

μὴ κάμης φίλον ἀνδρα εὐεργετῶν =
 don't weary benefiting a friend.

c. Sometimes however the meaning differs according as the incorporation is effected by the Infinitive or by a participle, the participle incorporating a *fact*, the Infinitive incorporating a *conception* under various forms, as

οἶδα (ἐπισταμαι) τοὺς θεοὺς σεβόμενος =
 I know I reverence the gods.

οἶδα (ἐπισταμαι) τοὺς θεοὺς σέβεσθαι =
 I know how to reverence the gods.

δείκνυμι (ἀποφαίνω) σὲ ἀδικήσαντα =

I show that you did wrong.

δείκνυμι (ἀποφαίνω) σὲ ἀδικεῖν =

I show you how to do wrong.

μανθάνω σοφὸς ὦν = I am aware that I'm wise.

μανθάνω σοφὸς εἶναι = I am learning to be wise.

φαίνομαι ὤν = I manifestly am.

φαίνομαι εἶναι = I seem to be.

μεμνήσθω ἀνὴρ ἀγαθὸς ὦν =

let him remember he is a brave man.

μεμνήσθω ἀνὴρ ἀγαθὸς εἶναι =

let him remember to be a brave man.

ἀκούω σοῦ ἀδοντος = I hear (with my own ears) you singing.

ἀκούω σὲ ἀδειν = I hear (from others) that you sing.

γιγνώσκω ἀγαθοὺς ὄντας τοῖς οτρατιώταις τοὺς ἀγῶνας =

I know that the public games are useful to the soldiers.

γιγνώσκω τοὺς ἀγῶνας τοῖς οτρατιώταις ἀγαθοὺς εἶναι =

I consider the public games to be useful to the soldiers.

ποιῶ σὲ γελῶντα = I represent you laughing.

ποιῶ σὲ γελᾶν = I make you laugh.

αἰσχύνομαι λέγων = I am ashamed as I speak.

αἰσχύνομαι λέγειν = I am ashamed to speak (and therefore don't).

ἡρξαντο οἰκοδομοῦντες = they began building.

ἡρξαντο οἰκοδομεῖν = they began to build

i. e. they began to prepare for building.

οὐ περιορᾶν τὴν χώραν τμηθεῖσαν =

not to suffer i. e. to avenge the ravaging of one's country.

οὐ περιορᾶν τὴν χώραν τμηθῆναι =

not to suffer i. e. to prevent the ravaging of one's country.

§. 47. **Significant Terminations.** The following classification is taken with slight variations from Crosby (Greek Gram. §§. 318, 319.).

1. Derivatives from nouns and adjectives.

a. -άω (mostly from nouns of Decl. I.) } signifying to be or
 -έω
 -εύω } do that which is
 } denoted by the
 } primitive, as

τολμάω = I dare, φιλέω = I am a friend,

τιμάω = I honour, εὐδαιμονέω = I am prosperous,

βασιλεύω = I reign, χορεύω = I dance.

b. *-alvω* { mostly from adjectives
-vω { make that which
-óω (mostly from nouns of Decl. II.) } is denoted by
 the primitive, as

λευκαίνω = I whiten, ἡδύνω = I sweeten,
σημαίνω = I signify, μακρύνω = I lengthen,
δουλόω = I enslave, χρυσόω = I gild.

c. -*լչω* } signifying *imitation* when the primitive is the
 -*աչω* } name of a person or animal; otherwise, *causa-*
 tive, as

Δωρίζω } Δωριάζω } — I imitate the Dorians,

πλουτίζω == I make rich.

2. Derivatives from other verbs:

a. -σειω (from the future) -ιώ (from verbal nouns) } signifying *desire* to do that which is denoted by the primitive, as

πολεμησεῖω = I wish for war,

στρατηγιάω = I desire military command.

Desideratives are also, but very rarely, formed in *-άω*, as *θανατάω* = 'I desire death'.

b. *-ξω*, intensive and frequentative;
-σκω, inceptive and causative.

Compare *{στένω* = I sigh, *{φέπτω* = I throw,
{στενάζω = I sigh deeply. *{φιπτάζω* = I toss.
{ήβάω = I am at the age of puberty,
{ήβάσκω = I approach the age of puberty.
{μεθύω = I am drunk,
{μεθύσκω = I make (some one else) drunk.

ADVERBS.

The adverb is an indeclinable word, expressing some circumstance affecting commonly the verb.

§. 48. **Negative Adverbs.** The most important of the primitive adverbs, syntactically considered, are the negatives *οὐ* and *μή*. These differ from each other as do the Indicative and Subjunctive moods (§. 32.), *οὐ* being the *no* of fact, *μή* the *no* of conception; and accordingly, they are found as a rule, *οὐ* with the Indicative, *μή* with the Subjunctive Mood.

<i>Fact</i>	<i>Conception</i>
<i>οὐκ ἀποκρίνομαι</i> =	<i>ἵνα μὴ ὀργίσω φίλον ἀνδρα</i> =
<i>I don't answer,</i>	<i>that I may not anger my friend.</i>

It is however the meaning which determines whether *οὐ* or *μή* is to be used: no matter what the mood, or what even the part of speech, for *οὐ* and *μή* are used with nouns and adjectives too, *οὐ* applies to *fact*, *μή* to *conception*. Hence *οὐ* is found with forms of the Subjunctive Group, when these have the sense of the future Indicative (§. 41. a.); and with forms of the Optative Group, when these are allied to the Indicative either by being Potential (§. 43.), or by representing in the *oratio obliqua* (§. 96.) the Indicative of the *oratio recta*, as

O. R. *οὐ πω δὴ πολλοῦ χρόνου ἥδιοντι οἴνῳ ἐπέτυχον* =
I hav'n't for a long-time met with pleasanter wine.

O. O. *ἔλεξεν*
ὅτι οὐ πω δὴ πολλοῦ χρόνου ἥδιοντι οἴνῳ ἐπέτυχοι =
He said

that he hadn't for a long time met with pleasanter wine.

On the other hand, *μή* is found with the Indicative in wishes (§. 42. Obs.), in conditional clauses (§. 93.), and in final clauses expressed by the future Indicative (§. 35. Obs. 2.); because *wishes*, *conditions*, and *aims* are as such not *facts*, but *conceptions*, as

μήποτε ὥφελον λιπεῖν τὸν Σκύρον ==

Oh that I had never left Scyros!

εἰ μὴ φυλάξεις μίκρ' ἀπολεῖς τὰ μείζονα == if you shall not take care of littles, you will lose the great.
Τιμοκράτης τοῖς πονηροῖς, ὅπως μὴ δώσονται δίκην,
δόδον δείχνειν == Timocrates shews bad men a way by which they may not pay the penalty.

For the same reason, *μή* negatives the Imperative mood. Both *οὐ* and *μή* are found with the Infinitive, because infinitival clauses denote sometimes *facts*, sometimes *conceptions*. Generally speaking, after *verba declarandi et sentiendi* they denote facts, being resolvable into *ὅτι* with the Indicative, and are negated by *οὐ*: in other cases including the substantival Infinitive with the article (§. 6. a.), they are negated by *μή*, as

δμολογῶ οὐ κατὰ Μέλητον καὶ "Αννυτον εἶναι φήτωρ ==

δμολογῶ ὅτι οὐ κατὰ Μέλητον καὶ "Αννυτόν εἰμι φήτωρ ==

I acknowledge I am not an orator after the fashion of Meletus and Anytus.

δέομαι σοῦ μὴ περιορᾶν ἐμὲ ἀπολλύμενον ==

I pray you not to stand by and see me perishing.

σοὶ τὸ μὴ σιγῆσαι λοιπὸν ἥν ==

it remained for you not to be silent.

With participles, adjectives, and substantives, the distinction is the same, *οὐ* marking *fact*, *μή* *conception*, as λέγω ἐν οὐκ εἰδόσιν ==

I speak among those who don't know.

τίς ἀν πόλις ὑπὸ μὴ πειθομένων ἀλοίη; == what city could be taken by men who shouldn't be obedient?

τὰ οὐκαλά == dishonourable things (concrete).

τὸ μὴ καλόν == what is dishonourable (abstract).

δι' οἴητον σὲ ἔχω ἀνδρα οὐκ εὐδαίμονα ==

I pity you unhappy man that you are.

φοβούμην ἀν σὲ ἀνδρα μὴ εὐδαίμονα ==

I should dread you if you were an unhappy man.

ἐπήγγειλε τὴν τῶν γεφυρῶν οὐ διάλυσιν ==

he reported the non-destruction of the bridges.

δεινόν ἔστιν ή μὴ ἐμπειρία ==

inexperience (not any particular individual's actual *inexperience*, but *inexperience wherever it may exist*) is a dreadful thing.

The above distinction between *οὐ* and *μή* is maintained between their compounds:

Objective i. e. for *facts*, οὐτε, οὐδέ, οὐδείς κ. τ. λ.

Subjective i. e. for *conceptions*, μήτε, μηδέ, μηδείς κ. τ. λ.

A beautiful illustration of the difference between *οὐ* and *μή* is afforded by their use in questions put negatively. When the question is presumed to accord with *fact*, so that the answer 'yes' is expected, the question is put by *οὐ* or one of its compounds; when the question is presumed to be a mere *conception*, because not according with fact, so that the answer 'No' is expected, the question is put by *μή* or one of its compounds, as

ἄρ' οὐκ ἔστιν ἀσθενής; == he is ill, isn't he? (Yes.)

ἄρα μὴ ἔστιν ἀσθενής; == he isn't ill, is he? (No.)

The distinctive force of *οὐ* and *μή* is well brought out in passages where, at first sight, they seem to be interchanged, as

(Plat. Phaed. 76, E.) εἰ μὴ ταῦτα ἔστι, οὐδὲ τάδε ==

if that is not true, neither is this.

(Eur. Alc. 690.) μὴ θυήσῃ ὑπὲρ τοῦδ' ἀνδρὸς, οὐδὲ ἔγω
πρὸ σοῦ == die not on my behalf, nor
yet (will) I for thee.

(Soph. Ant. 682.) οὐκ ἀν δυναίμην, μητ' ἐπισταίμην
λέγειν == I couldn't say, nor may I
(ever) know how to say.

Obs. 1. **Deficiencies of the Greek Subjunctive Mood supplemented by *μή*.** By possessing two negative adverbs, one subjective, the other objective, i. e. allied in force the one to the Subjunctive Mood, the other to the Indicative, the Greek language in part recoups, as it were, the deficiencies of its Subjunctive Mood (§. 40. Obs. 1.). Whenever *μή* accompanies an Infinitive or a participle, the infinitival or participial clause answers to a Latin Subjunctive clause, as

δέομαι σοῦ μὴ περιορᾶν ἐμὲ ἀπολλύμενον ==
te precor ne *committas* ut peream.
τίς ἀν πόλις ὑπὸ μὴ πειθομένων ἀλοίη; ==
quae urbs a militibus caperetur *qui duci non parerent*.

This power of *μή* is most remarkable when exercised in connexion with the Indicative, because the Indicative is specially the fact-mood. It is so exercised in relative clauses, as

ἢ οὐκ οἶδεν οὗτος, ταῦτα λέγει } = what this man doesn't
quae nescit hic, ea dicit. } understand, that he says.
ἢ μὴ οἶδέ τις, ταῦτα μὴ λεγέτω } = what a man doesn't un-
quae quis nesciat, ea ne dicat. } derstand, let him not say.
ἢν ποτε χρόνος ὅτε θεοὶ μὲν τῇσαν, θνητὰ δὲ γένη οὐκ τῇν =
fuit aliquando tempus *quum erant* dii, mortalia autem genera non
erant == there was once a time when gods were, but mortal
generations were not.
ἢ πον χαλεπῶς ἀν τοὺς ἄλλους πείσαιμι ἀνθρώπους, . . .
ὅτε γε μήδ' ὑμᾶς δύναμαι πείθειν = difficile quidem caeteris
hominibus persuadeam, *quum ne vobis quidem persuadere possim* =
certainly I should persuade the rest of men with difficulty, since
I am unable to persuade even you.

Obs. 2. Λιτότης in Negation. Many of the examples in which the above distinction between *οὐ* and *μή* is apparently disregarded are examples of the Greek *λιτότης* (§. 38. Obs. b.). Negation offers a wide field for this figure of speech, as

οὐχ ἡκιστα = μάλιστα = in the highest degree.
οὐκ ἀφανῆς = ἔνδοξος = distinguished.

Witness also the formula frequent in Thucydides, as (Thuc. II. 39.)

καὶ μὴ μετὰ νόμων τὸ πλεῖον ἢ τρόπων ἀνδρίας =
and not with enforced more than with natural courage i. e.
and not with enforced so much as with natural courage.

With *verba declarandi et sentiendi* followed by an infinitival clause, the formula dictated by *λιτότης* is

οὐ φημὶ τοῦτο εἶναι = *nego hoc esse* =
I don't say this is == I say this is not.
οὐκ ἀξιοῦμεν δοῦλοι εἶναι = we don't claim to be slaves ==
(allowing for *λιτότης*) we disclaim being slaves.

Now in these and many other cases, as *οὐκ ἔω* == 'I hinder', *οὐκ ὑπισχνοῦμαι* == 'I refuse', *οὐ κελεύω* == 'I forbid', *οὐ στέργω* == I hate, the negative *οὐ* has become a permanent adjunct negativing a single word, and is therefore found where *μή* would otherwise have been used, as

οὐ φῶμεν = let us deny.
εἰ τοὺς θανόντας οὐκ ἔστις θάπτειν ==
if you prevent the burial of the dead.

Another form of λιτότης is when a really affirmative clause takes the conditional form; in which case εἰ = ὅτι, and the negation is added either with οὐ according to the *meaning*, or with μή according to the *form* of the clause. Because the substitution of εἰ for ὅτι is a form of politeness, it is most common when there is something disagreeable to say, as after verbs denoting disapprobation; and εἰ μή is more polite, as it is also more common, than εἰ οὐ.

Θαυμαζω εἰ ταῦτα οὐ ποιεῖς = I wonder you don't do that.
ἄγανακτῷ εἰ οὐτωσὶ ἀ νοῶ μή οἶστις τ' εἰπειν =

I am indignant that in this way I cannot say what I think.

The fact of μή being the politer negation, and οὐ the more decided, accounts for both being found in the same kind of clause, as in relative, infinitival, and participial clauses, and for the use of οὐ rather than of μή in cases of antithesis even in conditional clauses, particularly when the contrast is marked by μὲν — δέ (Madv. §. 202. a. Rem.). The progress of refinement accounts for what Madvig has observed, viz. that later writers, as Plutarch, Lucian, Arrian, use μή in accessory sentences with ὅτι ὡς (that), with ὅτι, ἐπειδή (because), and with participles, much more frequently than do the older writers.

It is often indifferent, especially in the case of conceptions which are also daily facts, whether the form proper to conceptions, or the form proper to facts be employed, as

μῶρος ἔστι ὁστις τὴν ἀρετὴν οὐ (or μή) μελετᾷ = .

stultus est qui virtutem non meditatur (or meditetur) =

he is a fool who does (or should) not practise virtue.

Obs. 3. Negation of Infinitives and Participles. When the finite verb, though a verb *declarandi vel sentiendi*, on which the infinitival or participial clause depends, is itself in a form which would require μή to negative it, e. g. in the imperative, then the dependent infinitive or participle in like manner takes μή, as

νόμιξε μηδὲν εἰναὶ τῷν αὐτῷν βέβαιον =

consider that nothing human is stable:

οἶμαι σε, ἐάν τι αἴσθησεαντὸν μή εἰδότα, ξητεῖν τοὺς ἐπισταμένους = I suppose, if you feel yourself ignorant of anything, that you seek those who do know about it.

So, if μή is once used to mark a hypothesis, it is repeated whenever the hypothesis is again implied, as (John. III. 18.)

οὐ πιστεύων εἰς αὐτὸν οὐ κρίνεται. οὐ δὲ μή πιστεύων ἥδη κέκριται, ὅτι μή πεπίστευκεν κ. τ. λ. = he that believeth on him is not condemned; but if any one believeth not, he has been condemned already, because (on that supposition) he has not believed &c.

Obs. 4. Redundant Negation. *a.* Two negatives belonging to different predicates cancel each other as in English, as

οὐδεὶς ὅστις οὐ γελάσεται =

there is no one who will not laugh i. e. every one will.

But when two negatives belong to the same predicate, they don't cancel each other as in modern English, and are so far from being redundant that they strengthen each other, as

μὴ λανθανέτω σε μὴ δὲ τοῦτο =

let not even this escape your notice.*

Hence the indefinite *any* in whatever combination, *any* one, *any* how, *any* where, at *any* time, in an English negative sentence is translated, when the most emphatic negation is intended, by a Greek negative, as (Plat. Rep. p. 495.)

σμικρὰ φύσις οὐδὲν μέγα οὐδέποτε οὐδένα οὐτε ἰδιώτην,
οὐτε πόλιν δρᾶ = a petty nature never makes anything great,
neither an individual nor a state.

The simple indefinite is however found after negatives, as (Xen. Mem. IV. §. 1.)

οὐδεὶς πώποτε κάλλιον θάνατον ἤνεγκεν ἢ Σωκράτης =
no one ever met death more nobly than Socrates.

Here οὐδεπότε would have been more emphatic than πώποτε.
Such examples as (Dem. 19. 77.)

μὴ οὖν . . . μὴ δότω δίκην =

let him not then *escape* punishment

are only apparent exceptions to the rule that two negatives referring to the same predicate strengthen one another, for μὴ, immediately preceding δότω, has become a permanent adjunct (§. 48. Obs. 2.) negativating the single word δότω, so that μὴ δότω = 'escape', one notion.

b. After verbs of negative or semi-negative meaning, as *denying* or *doubting*, *preventing* or *delaying*, *refusing* or *refraining from*, they themselves not being accompanied by a negative, a μὴ which cannot be translated into English is added to the Infinitive, as

ἥρνοῦντο μὴ πεπτωκέναι = they denied they had fallen:

Τιμόθεος Αριοβαρζάνει ἀπέγνω μὴ βοηθεῖν =

Timotheos refused to assist Ariobarzanes.

The explanation of this anomaly is that in English the *thing denied* or *refused* is subjoined, whereas in Greek the *denial* or *refusal* itself is subjoined. Thus

* It thus appears that the English vulgarism, '*I don't know nothing*' = '*I don't know anything*', is classical in Greek, οὐ γιγνώσκω οὐδέν. It is equally so in Italian, and it was so in Anglo-Saxon: historically therefore it is not a corruption of pure English, but a surviving fragment of the primitive dialect.

This $\mu\eta$ is however sometimes omitted, particularly after $\kappa\omega\lambda\nu\omega$ = 'I hinder' and its compounds. Even when the Infinitive is resolved by $\tilde{\sigma}\tau\iota$ or $\tilde{\omega}\varsigma$ with the Indicative or Optative, an apparently superfluous negative, in the form of $o\nu$ however, is added in the clause depending on verbs of *doubt* and *denial*. Compare the French and Italian:

La pluie *empêcha* qu' on *ne* se promenât dans les jardins =
the rain prevented people from walking in the gardens.
guardarsi di *non* credere alle favole =
to beware of believing stories.

c. After the above-mentioned verbs, when they themselves are accompanied by a negative, and generally after all negative expressions which in Latin would be followed by *quin* with the Subjunctive, the Infinitive takes *μή οὐ*, as

οὐκ ἡροῦντο μὴ οὐ πεπτωκέναι =

non negabant quin cecidissent =

they didn't deny but that they had fallen:

Τιμόθεος Ἀριστοβαρξάνει οὐκ ἀπέγνω μὴ οὐ βοηθεῖν =

Timotheos non recusavit quin Ariobarzani subveniret ==

Timotheos did not refuse to assist Ariobarzanes.

After **δεινόν**, **αἰσχρόν**, **αἰσχύνη**, **ἀνόητον**, **πολλὴ ἀνοιά ἐστιν**, and **αἰσχύνομαι**, which all imply a negative notion viz. disapprobation, the Infinitive is generally negatived in the same way, as

πολλὴ ἄνοια μὴ οὐχὶ ἐν τε καὶ ταῦτὸν ἡγεῖσθαι τὸ ἐπὶ πᾶσι τοῖς σώμασι καλλος = it is great folly not to consider beauty in all objects as one and the same.

Mη̄ ov̄ is also found with participles depending on negative expressions, as (Soph. Aed. Tyr. 12.)

δυσάλγητος γὰρ ἀν εἰην, τοιάνδε μὴ οὐ κατοικείων ἔδραν
= I should be ruthless if I did not pity such a suppliant posture.

d. Οὐ μή is almost restricted to the future Indicative, and to the aorist of the Subjunctive Group taken in a future sense (§. 41. a.). In the 2d pers. sing., the future indicative is pointed interrogatively with *οὐ μή*, and is a strong prohibition, as

οὐ μὴ φλυαρησεις ἔχων; = don't keep playing the fool.

Of course, if *οὐ μή* be with the future Indicative in the *oratio recta*, it will be with the future Optative in the *oratio obliqua*.

e. After comparatives with η = 'than', an *ov*, which cannot be translated in English, is sometimes used as if to mark the inequality or discord existing between the two branches of the compar-

sou. Generally, a negative precedes in the first branch of the comparison, but not always, as

(Herod. IV. 118. 15.) *ῆκει γὰρ ὁ Πέρσης οὐδέν τι μᾶλλον ἐπ'*
ῆμέας η̄ οὐ καὶ ἐπ' ὑμέας = for the Persian is come not more
 against us than against you.

(Thuc. III. 86. 4.) *ῷμὸν τὸ βούλευμα . . . πόλιν ὅλην δια-*
φθεῖραι η̄ οὐ τοὺς αἰτίους = it is a cruel decree to destroy a
 whole city rather than the guilty.

In French and Italian also, there is a redundant negative after comparatives when a verb follows them, as

il n' écrit pas mieux cette année-ci qu'il n'en faisait l'année passée.
 il faut plus d'esprit pour apprendre une science qu'il n'en faut
 pour s'en moquer.

io scrivo più che io *non* parlo.

§. 49. Greek Particles. Many primitive adverbs in Greek serve merely to indicate the relative importance of words or clauses, the degree of the speaker's assurance in uttering them, or some other feature of the *animus loquentis*, which, for the most part, we convey to the hearer by suitable gestures or modulations of the voice, and suggest to the reader by underlining in manuscript, or by *italics* in print. Thus *η̄*, *μήν*, and the enclitic *τοι* asseverate; *η̄ μήν* is common in oaths, *η̄τοι* in contrasts. The enclitics *περ*, *γε* intensify, as

πρωτόν περ = quite the first,

σύ γε = you at any rate.

The enclitic *νυν* = 'therefore', peculiar to poetry, must be distinguished from the temporal *νῦν* = 'now', although *νῦν* itself is sometimes illative (Jelf. §. 719. 2.). Homer's enclitic *νν*, used in asseveration, is another form of the same word. *Νῦν* and *η̄δη* are related as *nunc* and *jam*, *νῦν* properly denoting the present, and *η̄δη* the immediate past or the immediate future, like the French *tout à l'heure*. *Νῦν* however is also found referring to the past and future, as well as to the present, like our own phrase *just now*, which answers for all three, and when referring to past or future time represents the force of *η̄δη*. From the temporal meaning of *η̄δη* is derived a local, as (Thuc. III. 95. 1.)

Φωκεῦσιν ἡ δη ὅμορος ἡ Βοιωτία ἐστίν =

Boeotia is *exactly* conterminous with the Phocians.

Δή, which is supposed to be a shortened form of *ἡδη*, is used with expressions of time in the sense of *exactly*, and even with pronouns and conjunctions in much the same sense, as

ἴνα δή = just that, *οὐδεὶς δή* = just he.

Expressly interrogative words are often emphasized by *τέ*, *ποτέ* (not to be confounded with *πότε*; = *when?*), *ἄρα*, *οὖν*, *δή*, *μήν*, *γάρ*. Hence the Homeric

τίπτ'; = *τίποτε*; = why?

which exactly corresponds to the English vulgarism '*what ever was the cause of that?*'

The illative force of *ἄρα* is that which it acquired last, the successive stages being marked by the meanings — *exactly*, *straightway*, *therefore*. In Homer, *ἄρα* had the first of these meanings, as

ὅτ' *ἄρα* = just when, *εἰ μὴ ἄρα* = if not exactly, the latter often in an ironical sense, like the Latin *nisi forte*. Hence *ἄρα* is often used in Epic as a continuative particle, like our *namely*, *to wit*, and in Ionic and Attic prose in the sense of *straightway*, as

ταῦτα ἀκούσας, *ὁ Κύρος ἐπαίσατο ἄρα τὸν μηρόν* =

on hearing this, Cyrus *forthwith* struck his thigh.

The illative *ἄρα* must be distinguished from its post-Homeric form *ἄρε*, which is generally interrogative; though in Attic poetry *ἄρα* is sometimes used for *ἄρε* (Jelf §. 789. b. Obs.).

But the proper use of the Greek particles, as these small adverbs are called, cannot be learned by rules any more than can the proper use of the Italian *pure*, or the German *wohl*: only by careful and extensive reading is it possible to realise their force.

Obs. 1. *"Av Potential.* The potential particle *ἄν* may be distinguished from the conjunction *ἄν* = 'if' by this, that whereas

the latter *introduces* its clause, the former, except in short parentheses, as $\tilde{\alpha}\nu\ \tau\iota\varsigma\ \varphi\alpha\tilde{\iota}\eta$ = 'one might say', never does. Usually $\tilde{\alpha}\nu$ potential stands beside the word which it qualifies, yet it is often attracted into juxtaposition with the most emphatic word standing at the head of the clause, as

$\mu\alpha\lambda\iota\sigma\tau\alpha\ o\mu\alpha\iota\ \tilde{\alpha}\nu\ \sigma\o\ \pi\nu\theta\epsilon\sigma\theta\alpha\iota\ (\tilde{\sigma}\tau\iota\ \pi\nu\theta\o\mu\eta\ \tilde{\alpha}\nu)$ =

I think I *should learn* best from you:

$K\tilde{\nu}\rho\varsigma,\ \varepsilon\iota\ \tilde{\epsilon}\beta\iota\omega\sigma\sigma\iota\ \tilde{\alpha}\rho\iota\sigma\tau\o\ \tilde{\alpha}\nu\ \delta\o\kappa\tilde{\iota}\ \tilde{\alpha}\rho\chi\omega\ \gamma\epsilon\nu\epsilon\sigma\theta\alpha\i\ (\tilde{\sigma}\tau\iota\ \tilde{\alpha}\nu\ \tilde{\epsilon}\gamma\epsilon\nu\sigma\tau\o)$ = it seems that Cyrus, had he lived, *would have proved* an excellent ruler.

" $\tilde{\alpha}\nu$ potential is sometimes omitted where it might be used, and sometimes repeated unnecessarily: in either case, the difference is one not of meaning, but of perspicuity or emphasis.

Obs. 2. " $\tilde{\alpha}\nu$ with forms of the Subjunctive Group." The particle $\tilde{\alpha}\nu$ with forms of the Subjunctive Group affects the meaning not of the verb, but of the conjunction or relative word introducing the clause; and it does so very much as the English suffix-*ever* affects the meaning of the words to which it is appended (§. 29.), as

$\tilde{\epsilon}\omega\varsigma\ \tilde{\alpha}\pi\epsilon\tilde{\theta}\alpha\varsigma$ = till he died,

$\tilde{\epsilon}\omega\varsigma\ \tilde{\alpha}\nu\ \tilde{\alpha}\pi\o\theta\alpha\varsigma\eta$ = till he die (whensoever that may be).

Obs. 3. Particles never beginning a Clause. These are, besides $\tilde{\alpha}\nu$ potential and the indefinite adverbs beginning with $\pi-$, as $\pi\o\tau\epsilon$, $\pi\o\mu$ &c.,

$\tilde{\alpha}\rho\alpha$ illative, not to be confounded with $\tilde{\alpha}\rho\alpha$ interrogative, $\alpha\tilde{\nu}$ = again (poetic $\alpha\tilde{\nu}\tau\epsilon$), $\alpha\tilde{\nu}\theta\iota\varsigma$ (Ionic $\alpha\tilde{\nu}\tau\iota\varsigma$),

$\gamma\alpha\tilde{\rho}$, $\gamma\epsilon$, $\delta\alpha\iota$, $\delta\epsilon$, $\delta\eta$ (except in Hom. and Pind.), $\delta\eta\theta\epsilon\sigma$, $\delta\eta\tau\alpha$, the poetic $\tilde{\vartheta}\eta\varsigma$, the Epic $\kappa\epsilon$, $\mu\epsilon\tilde{\nu}$, $\mu\epsilon\tilde{\nu}\tau\o\iota$, $\mu\eta\varsigma$, $\nu\tilde{\nu}\nu$ illative, $\nu\tilde{\nu}$ Epic, $\o\tilde{\nu}\nu$, $\pi\epsilon\tilde{\rho}$, $\tau\epsilon$, $\tau\o\iota$, $\tau\o\iota\tilde{\nu}\nu\tilde{\nu}$.

Obs. 4. Correlated Adverbs. These are subjoined in a list based on the same principle as the list of correlated pronouns §. 27.

Direct	Indirect		
Interrog.	Indef.	Relative*	Interrog.
$\pi\o\theta\epsilon\sigma$	$\pi\o\theta\epsilon\tilde{\nu}$	$\tilde{\o}\theta\epsilon\sigma$	$\tilde{\o}\pi\o\theta\epsilon\sigma$
$\pi\o\tilde{\nu}$	$\pi\o\mu$	$\tilde{\o}\pi\o\tilde{\nu}$	$\tilde{\o}\pi\o\mu$
$\pi\o\iota$	$\pi\o\iota$	$\tilde{\o}\pi\o\iota$	$\tilde{\o}\pi\o\iota$
$\pi\tilde{\eta}$	$\pi\tilde{\eta}$	$\tilde{\o}\pi\tilde{\eta}$	$\tilde{\o}\pi\tilde{\eta}$
$\pi\o\varsigma$	$\pi\o\varsigma$	$\tilde{\o}\pi\o\varsigma$	$\tilde{\o}\pi\o\varsigma$
$\pi\o\tau\epsilon$	$\pi\o\tau\epsilon$	$\tilde{\o}\pi\o\tau\epsilon$	$\tilde{\o}\pi\o\tau\epsilon$
$\pi\o\sigma\alpha\kappa\iota\varsigma$		$\tilde{\o}\pi\o\sigma\alpha\kappa\iota\varsigma$	$\tilde{\o}\pi\o\sigma\alpha\kappa\iota\varsigma$
		$\tilde{\o}\pi\o\sigma\alpha\kappa\iota\varsigma\ \tau\o\sigma\alpha\kappa\iota\varsigma$	$\tilde{\o}\pi\o\sigma\alpha\kappa\iota\varsigma\ \tau\o\sigma\alpha\kappa\iota\varsigma$
			Demonstrative
			$\tilde{\epsilon}\nu\theta\epsilon\tilde{\nu}\theta\epsilon\sigma$

* The *relative* adverbs, and those called *indirectly interrogative*, compound relatives in their nature, may be regarded as *conjunctions*, because they always *conjoin* clauses.

From the root **ΤΟΣ** (§. 27.), **τόθεν** = 'thence', and **τόθι** = 'there' are found in the most ancient authors. The difference between *here* and *there*, *hence* and *thence*, *hither* and *thither* is not always marked by the Greek adverbs alone: the context shews whether **ἐντεῦθεν** = *hence* or *thence*, and whether **ἐνταῦθα** = *here* or *there*, or, like these English words, = *hither* or *thither*. In Attic prose, **ἐνθάδε** = *here* or *there* commonly; but in poetry sometimes *hither* or *thither*. Only the commonest forms appear in the above list; for in the totality of Greek a great many rarer kindred forms are found.

§. 50. Derivative Adverbs. *a.* The termination **-ως** of adverbs derived from adjectives is said to be an old ablative, kindred with a Sanscrit form: but practically the adverb can always be obtained from the genitive plural of the adjective by changing final **ν** into **ς**, and this empirical mode of derivation gives also the accentuation of the adverb, which is always the same as that of the genitive plural of the adjective, as **φίλων φίλως**, **καλῶν καλῶς**. Such derivatives are capable of comparison, the adverb borrowing its comparative and superlative from those of the adjective, the comparative from the acc. sing. neuter, and the superlative from the acc. plur. neuter, as **καλῶς**, **καλλιον**, **καλλιστα**. Even the positive is sometimes expressed by the acc. neuter of the adjective, as

Sing. **πολύ** = much, **ολίγον** = a little while,
μέγα βοῶν = to cry aloud, **οξὺ ὀρᾶν** to see keenly,
ἡδὺ, κακὸν ὄξειν = to smell sweetly, badly.

Plur. **πολλά, συχνά, πυκνά** = frequently.

b. The oblique cases of nouns and pronouns, but especially the accusative of nouns, furnish a great number of adverbs, as

Gen. **ἐπιπολῆς** = on the surface, **αὐτοῦ** = just here, just there, the pronominal adverbs in **-ον** (§. 49. Obs. 4.).

Dat. **ἡρι** = early in the year, **ὑψι** = on high,
πέδοι = on the ground, **οἶκοι** = at home,
the pronominal adverbs in **-οι**, and **-η** (§. 49. Obs. 4.).

Acc. <i>ἀρχήν</i> = at all,*	<i>μάτην</i> = in vain,
<i>δίκην</i> = like,	<i>ακμήν</i> = directly,
<i>δωρεάν</i> , <i>δωτίνην</i> , <i>προίκα</i> = gratis,	<i>χράτος</i> = strongly,
<i>χράτος</i> = strongly,	<i>πέρας</i> = lastly,
<i>οὖ</i> , <i>αὖ</i> = wherefore,	<i>τούτο</i> , <i>ἔκεινο</i> = therefore.

c. The normal suffixes denoting *whence*, *where*, and *whither* are *-θεν*, *-θι*, and *-δε*, as

<i>οἴκοθεν</i> = from home,	<i>οἴκοθι</i> = at home,
<i>οἴκόνδε</i> = to home,	<i>Ἀθήναξε</i> (<i>Ἀθήνας-δε</i>) = to Athens.

To pronouns and adverbs *-σε* is suffixed instead of *-δε*, as
ἔκεισε = thither, *αὐτόσε* = to the very place.

d. To these must be added a few adverbs of manner in *-ηδόν* or *-δόν* derived chiefly from nouns; in *-δην*, or *-αδην*, or *-δα* derived chiefly from verbs; and in *-ι* or *-ει* derived from imitative verbs in *-ιξω* (§. 47.), and from compounds of *α* privative, as

<i>ἀγεληδόν</i> = in droves,	<i>κρύβδην</i> } = secretly,
<i>βοτρυδόν</i> = in clusters,	<i>κρύβδα</i> } = secretly,
<i>ἀμαχητί</i> } = without battle,	<i>σποράδην</i> = scatteringly,
<i>ἀμαχητεί</i> } = without battle,	<i>Μηδιστί</i> = like the Medes.

PREPOSITIONS.

Prepositions are indeclinable words interpreting the case-endings of the Noun (§. 11. b.).

§. 51. **Prepositions ~ Adverbs.** All the prepositions except *ὑπέρ* occur, like our own *before* and *after*, as local adverbs, which was no doubt their primitive character. This use of them is most frequent in Homer and Herodotus, as (Il. XVIII. 562.)

μέλανες δ' ἀνὰ βότρυες ἥσαν =
 and black grapes were thereon.

* In this sense, *ἀρχήν* is used only of actions, and these negatived, as

ἀρχὴ μηδὲ λαβών = not having received it at all,
 (lit.) = not having received it to begin with.

Even two prepositions are found adverbially together, as (Il. XI. 180.)

περὶ πρὸ γὰρ ἔγχεῖ θύεν =
for *round in front* he slew with his spear.

The adverbial use of prepositions in connexion with verbs with which they were afterwards incorporated is marked in early Greek by the intervention of words between the preposition and the verb, the preposition however almost always preceding, contrary to the English collocation in like cases. Examples abound in Homer, Herodotus, and the tragic chorus: in Attic prose they are very rare, and even in Attic poetry, the *imesis*, as this is called, is effected by only a single particle or other small word, as

(Il. I. 67.) *ἀπὸ λοιγὸν ἀμύναι* = to ward off destruction,
(Eur. Hec. 1172.) *ἐκ δὲ πηδήσας* = and leaping forth.

Sometimes a verb, instead of being itself repeated, is recalled by the preposition which accompanied it being repeated, as (Herod. VIII. 33.)

Κατὰ μὲν ἐκανσαν Δρύμον πόλιν, κατὰ δὲ Χαράδρην =
They burnt *down* the city of Drymos, and *down* (they burnt) Charadra.

Sometimes on the other hand, the verb is alone repeated even though it had been incorporated with the preposition into one word, as (Plat. Phaed. p. 59. B.)

παρῆν καὶ δὲ Κριτόβουλος . . . ήν δὲ καὶ Κτησιππος =
and Critobulus was present . . . Ctesippus too was (there).

Prepositions are often compounded with adverbs, as

ὑποκάτω = beneath, *ἔμπροσθεν* = in front,

εἰς τότε = until then, *ἐφάπαξ* = once for all,

and even when so compounded sometimes govern their proper case, as

προσέτι τούτῳ = besides this still.

Besides the prepositions properly so called, there are *improper* prepositions i. e. primitive adverbs of which the prepositional use is only occasional, the adverbial

prevailing (§. 82. c.). Different from these again are adverbs derived from adjectives, and governing the same case as the primitive adjective (§. 82. a.); and nouns used prepositionally, as

$\chi\acute{a}ρi\tau$ = on account of, $\kappa\acute{u}k\lambda\omega$ = around, to which may be added $\xi\nu\varepsilon\kappa\alpha$, if, as some suppose, $\xi\nu\varepsilon\kappa\alpha$ be the accusative of a lost noun. Here is an example of $\xi\nu\varepsilon\kappa\alpha$ bringing out more distinctly the force of a preposition proper (Thuc. VIII. 92.)

$\ddot{\sigma}\sigma\sigma\iota\alpha\pi\dot{\tau}\beta\sigma\eta\varsigma\xi\nu\varepsilon\kappa\alpha$ = so far as outcry was concerned.

Obs. 1. Anastrophe in Prepositions. Prepositions uniformly deserve their name when thoroughly incorporated with another word; for they always *precede* the other constituent part of the compound word. Out of composition however, with the exception of $\alpha\mu\varphi\iota$, $\alpha\nu\alpha$, $\alpha\nu\tau\iota$, $\delta\iota\alpha$, $\pi\varphi\o$, they are found following their cases, and then the dissyllabic prepositions have their accent thrown back by what is called *anastrophe*, as (Eur. Med. 925.)

$\tau\acute{e}k\nu\omega\tau\tau\omega\nu\delta\varepsilon\xi\nu\nu\sigma\sigma\mu\acute{e}\nu\pi\acute{e}\varsigma\iota$ = thinking of these children. The postposition of prepositions is chiefly poetic; in Attic prose, it occurs only with $\pi\acute{e}\varsigma\iota$ governing the genitive. When a preposition governs a substantive and an adjective in concord, it may stand either before both or between the two, the latter being the more poetic collocation, as

$\mu\acute{a}\chi\eta\xi\nu\iota\kappa\nu\delta\iota\alpha\nu\iota\varsigma\iota\eta$ = in glorious fight,
 $\vartheta\sigma\sigma\iota\acute{\sigma}\xi\nu\iota\kappa\eta\alpha\varsigma$ = to the swift ships.

In English interrogative and relative clauses, the preposition may be placed after its case, in order to stand nearer the verb with which it is loosely in composition, as

What pen did you write that *with*?

The very pen *which* you wrote *with* yesterday: not to mention interrogative, relative, and demonstrative compounds, like *wherewith therewith*. $\acute{\sigma}\nu\iota$, $\xi\pi\iota$, $\mu\acute{e}\tau\alpha$, $\pi\acute{a}\varphi\alpha$, $\pi\acute{e}\varsigma\iota$, $\tilde{\nu}\pi\o$, with the accent thrown back, when governing no case, are contracted forms of $\xi\nu\varepsilon\sigma\iota$, $\xi\pi\varepsilon\sigma\iota$, $\mu\acute{e}\tau\varepsilon\sigma\iota$, $\pi\acute{a}\varphi\varepsilon\sigma\iota$, $\pi\acute{e}\varsigma\varepsilon\sigma\iota$, $\tilde{\nu}\pi\varepsilon\sigma\iota$. $\acute{\alpha}\nu\alpha$ and $\acute{\delta}\iota\alpha$, with the accent thrown back, are respectively a contracted form of $\alpha\nu\acute{a}\sigma\iota\eta\dot{\tau}\iota$ = 'get up', and the acc. of *Zevs*.

Obs. 2. Prepositional Phrases. Prepositions form a great many adverbial phrases both without the article and with it (§. 6. Obs. 2.), as

$\alpha\nu\alpha\lambda\acute{y}\sigma\sigma\iota$	= proportionally,
$\alpha\nu\alpha\mu\acute{e}\varphi\sigma\iota$	= in turn,
$\alpha\pi\dot{\tau}\sigma\sigma\mu\alpha\tau\sigma\iota$	= by heart,
$\xi\kappa\pi\alpha\acute{d}\sigma\omega\tau$	= from childhood,

ἐν καιρῷ	= in time,
ἐν προσθήκης μέρει	= into the bargain,
ἐξ ἀπροσδοκητού	= unexpectedly,
ἐξ, ἐτοίμον	= promptly,
ἐκ, ἀμφότερα	= both ways,
ἐπ, αὐτοφωρῷ	= in the very act,
ἐπ, ἵσα	= in the same way,
ἐπὶ προφάσιος	= on pretence,
κατ ὄλλιγον	= in a small degree,
κατὰ πελύ	= in a great degree,
παρ, ἐαντοῦ	= from one's own resources,
παρὰ ποδός	= on the spot,
πρὸς ἀνάγκην	= necessarily,
ἀπὸ τοῦ προφανοῦς	= openly,
ἐν τῷ φανερῷ,	
ἐκ τοῦ αὐτομάτου	= spontaneously,
ἐκ τοῦ ἀδίκου	= unjustly,
ἐν τῷ ἀσφαλεῖ	= safely,
ἐπὶ τὰ μακρότερα	= lengthways,
κατὰ τὸ ἴσχυρόν	= violently,
σὺν τῷ καλῷ	= honourably,
τὸ ἀπὸ τοῦδε	= henceforth,
τὸ καθ' ἐαντόν	= for one's own part,
τὸ πρὸ τούτου	= aforetime.

CONJUNCTIONS.

Conjunctions are indeclinable connectives of words and clauses.

§. 52. Coordinating Conjunctions. In the primitive state of language, each thought was enunciated independently; and conjunctions arose only after the connexion and dependence of thoughts came to be clearly perceived, and the advantage of indicating that connexion and dependence came to be strongly felt. The connexion of thoughts would naturally be marked sooner than their dependence; hence the earliest conjunctions were doubtless the coordinating ones, viz. the copulative, the adversative, the disjunctive, and the illative.

Most profuse, as will be shown, is the Greek language in its use of these conjunctions.

Obs. The use of coordinating conjunctions to introduce clauses subordinate in meaning is frequent in the early writers, (§. 4.), and never entirely ceased, as

(Il. VI. 148.) *ἄλλα δέ θ' οὐλη*

τηλεθόωσα φύει· ἔαρος δ' ἐπιγίγνεται ὥρη =

but the greening wood puts forth others *when* spring-time comes.

(Thuc. I. 50. 5.) *Ηδη δὲ ήν ὁ ϕέ . . . καὶ οἱ Κορίνθιοι ἐξαπίνης πρόμναν ἐκρούνοντο =* and it was now late, *when* the Corinthians suddenly backed water.

On the same principle, in all stages of the language, *καὶ* after words implying likeness answers to *as*, the indeclinable English relative:

γνώμαις ἐχρῶντο ὁμολαίς καὶ σύ =

they entertained the same opinions *as* you.

§. 53. **Copulative Conjunctions.** The regular copulatives are *τέ* and *καὶ*, the former following, the latter preceding the word it introduces; in the case of a phrase or clause, the former following, the latter preceding the first word, as

πατὴρ ἀνδρῶν θεῶν τε = father of men and gods,

ὁ Σωκράτης καὶ ὁ Πλάτων σοφοὶ ήσαν =

Socrates and Plato were wise.

Not only may these conjunctions be repeated, *τέ* — *τέ*, *καὶ* — *καὶ*, so as to express *both* — *and*, but there is no limit to the number of times they may be repeated, as

(Il. I. 177.) *ἀεὶ γὰρ ἔρις τε φίλη, πόλεμοί τε, μάχαι τε =*
for strife is always welcome, and wars, and fights.

(Xen. Cyr. I. 47.) *πολλοὺς ἥδη διέφθειραν καὶ λέοντες, καὶ κάπροι, καὶ παρδάλεις =* lions, and boars, and panthers had already destroyed many.

In English, *and* is commonly put with only the last member of a series, but in Greek, each particular is commonly introduced by a conjunction. In the case of adjectives, when the series consists of only two, one of the adjectives is commonly subordinated to the other, as

τὸ πρῶτον καλὸν πρᾶγμα =

the first honourable action.

But *πολλοί*, even when subordinate in sense, is usually coordinate in form, as

πολλὰ καὶ καλὰ ἔργα = many honourable actions.

In poetry and oratory, copulatives are sometimes wholly dispensed with; this *asyndeton*, as it is called, forming an element of dignity in the Epic style, and of passion in the Lyric.

The use of *τέ* without *καὶ*, though very common in Epic and in tragedy, is rare in prose. *Kαὶ* is the stronger of the two, and is often used to introduce only the last and most important member of a series, the preceding members having been united by *τέ*, as

(Thuc. I. 3. 2.) *ἴθυντά τε τέ ἄλλα καὶ τὸ Πελασγικόν* = other nations and especially the Pelasgic.

Hence the phrase *ἄλλως τε καὶ* = 'especially', (lit.) 'both otherwise and'. A more intimate connection is expressed by *τέ . . . καὶ* than by *τέ . . . τέ*, *καὶ . . . καὶ*, and the most intimate of all is expressed when *τέ* and *καὶ* immediately succeed each other, as

πεζοί τε καὶ ἵππεις = both infantry and cavalry.

Note the formula *καὶ . . . τέ . . . καὶ* = 'And besides . . . and', as

Καὶ ήδη τε ήν ἀμφὶ ἀγορὰν πλήθουσαν, καὶ πλησίον ήν ὁ σταθμός = And besides it was now about the time of full market, and the station was near.

Obs. 1. *Tε as Suffix*. In Homer, *τέ* suffixed to words properly demonstrative imparts to them a relative force, which force some of them retained even when *τέ* came to be dropped: thus from the Homeric *ὅς τε* = 'and he' i. e. 'who', arose the Attic *ὅς* = 'who'. The suffixed *τέ* was however not always dropped, witness the Attic forms

ἄτε = as, *ώστε* = so that, *ἐφ' ὧτε* = on condition that,
ὅτε = when, *ἕσ(ό)τε* = till that, *ολός τε* = able.

Obs. 2. *Kαὶ as Adverb*. *Kαὶ* adverbial = *also*, *even*, as
καὶ σὺ Βροῦτε = *tu quoque Brute*.

So always after *ώσπερ*, and in the phrase *εἰπερ τις καὶ ἄλλος*, as
οὐ Σωκράτης εἰπερ τις καὶ ἄλλος =
Socrates, if any other man *besides*,
i. e. according to Greek *λιτότης*, 'Socrates more than any other man'.

In this way too, *ὡς . . . καὶ*, and *αὐταὶ . . . καὶ* are equivalents of *simul ac* in respect both of composition and of meaning, as

ὡς δὲ ἔδοξεν αὐτοῖς, καὶ ἐχώρουν εὐθύς =
and when they had resolved, they also forthwith departed =
simul ac decretum est ab iis; continuo discedebant.

§. 54. Adversative Conjunctions. The most common adversatives are *μὲν . . . δέ*, which beginners are told to translate 'on the one hand', 'on the other hand'. Often however the English can be so framed as to dispense with these cumbrous equivalents, as

πρὸς μὲν τοὺς φίλους φιλία, πρὸς δὲ ἐχθροὺς ἐχθρα =
towards friends friendship, towards enemies enmity.
αἰσχρόν ἐστιν εἰ ἐγὼ μὲν τοὺς πόνους, νῦν δὲ μηδὲ τοὺς λόγους αὐτῶν ἀνέξεσθε = it is a shame if, *whilst* I bear their unjust actions, you shall not put up with even their words.

In the following examples, the adversative force of *μὲν . . . δέ* clearly appears; yet, except in the first two examples, they are not represented by separate words:

<i>πρῶτον μὲν . . . ἔπειτα δέ</i>	= at first indeed . . . but afterwards,
<i>ἔνταῦθα μὲν . . . ἐκεῖ δέ</i>	= here indeed . . . but there,
<i>ποτὲ μὲν . . . ποτὲ δέ</i>	= { sometimes . . . at other times,
<i>ότε μὲν . . . οτὲ δέ</i>	= { now . . . again,
<i>τοτὲ μὲν . . . τοτὲ δέ</i>	= { at one time . . . at another,
<i>ό μὲν . . . ὁ δέ</i>	= this man . . . that man,
<i>τὰ μὲν . . . τὰ δέ</i>	= partly . . . partly.

The opposition expressed by *μὲν . . . δέ* seldom amounts to contradiction as in the following passage from Plato:

κανὸν μὲν βούλη ἔτι ἐρωτᾶν, ἔτοιμός εἰμι σοὶ παρέχειν ἀποκρινόμενος· εἰὰν δὲ βούλη, σὺ ἐμοὶ πάρασχε = if you wish to question farther, I am ready to afford you an answer; *but if otherwise*, then answer you me.

When whole clauses are connected, *μὲν . . . δέ* usually stand second in them; when the opposition is between particular words, *μὲν . . . δέ* stand immediately after the words opposed. In a series of clauses, *μὲν* goes with the first, and *δέ* with all the others, in which case the

adversative force is weakened into the merely copulative.* Without *μέν* preceding, *δέ* occurs in a variety of senses, *but*, *and*, *now*, *for*, its interpretation in each instance depending on the relation to each other of the clauses connected by it, as

(Matth. I. 18.) *Toῦ δὲ Ἰησοῦ Χριστοῦ ἡ γέννησις οὕτως ηὐν = Now the birth of Jesus Christ was on this wise.*

(Aesch. Pr. 817.) *ἐκμάνθανε· σχολῇ δὲ πλείων ἡ θέλω πάρεστι μοι = hear me out; for I have more leisure than I want.*

Without *δέ* following, *μέν* occurs with much the same force as the kindred *μήν* (Doric and Epic *μάν*) = 'surely', 'indeed'. Generally however, under this confirmative force lies also the adversative, which can be traced, if not in what is expressed, then in what is suggested to the mind.

Obs. Substitutes for *δέ*. These are *ἀλλά*, *αὐ* and its compounds, *μέντοι*, *οὐμως*.

a. *Ἀλλά* = 'but', though distinguished from the pronoun by its accent, is yet derived from *ἄλλος*, a reference to which explains the phrase *ἀλλ' ἡ* = 'except' used after negative clauses, and interrogative clauses implying a negation, as

ἀργύριον μὲν οὐκ ἔχω, ἀλλ' ἡ μικρόν τι =

I have no money *save* a little,

where *ἀλλ'* *ἡ* must have originally meant 'other than'. Elliptical forms worth noting are *οὐ μὴν ἀλλά*, *οὐ μέντοι ἀλλά*, *οὐ γὰρ ἀλλά*, the last being the most frequent in Attic, and all meaning *no indeed but*, or simply *yet*, as (Xen. Cyr. I. 48.)

ὁ ἵππος πέπτει εἰς γόνατα, καὶ μικροῦ κάκεῖνον ἐξετραχήλισεν οὐ μὴν ἀλλ' ἐπέμεινεν ὁ Κῦρος μόλις πως =
the horse came down on its knees, and almost threw even him over its neck; *yet* Cyrus stuck on though with some difficulty.

The ellipsis would seem to be that of *ὁ ἵππος ἐξετραχήλισεν* be-

* The opposite phenomenon, that of the copulative *καὶ* used adversatively, so frequent in the New Testament, particularly in the writings of Matthew and Peter, is deemed a Hebraism, as

(Matth. XI. 17.) *ηὐλήσαμεν ὑμῖν καὶ οὐκ ὥργήσασθε =*
we piped unto you, *but* ye danced not.

tween *οὐ μὴν* and *ἀλλά*, which would give the full sense, ‘the horse did *not indeed* throw him over its neck, *but* Cyrus stuck on &c.’ In exhortations, questions, and answers, the still adversative force of *ἀλλά* is often sufficiently rendered by *well* placed first, as

πειράσατ’ ἀλλ’ ὑμεῖς γε = well, try you at any rate,
ἀλλ’ η φρονεῖς; = well, do you really think?
ἀλλὰ βούλομαι = well, I consent.

b. *Ἄντε* and its compounds. *Ἄντε* was originally a local adverb, as in *αὐτὸν ἔργειν* = ‘to drag *backwards*’, and then acquired both a temporal and an adversative force, like the English *again*, as ‘he said this *again* i. e. a second time’, and ‘he *again* said this’ i. e. he on the other hand’. In Homer, it is generally accompanied by *δέ* when referring to a previous *μέν*. From *Ἄντε* are formed *αὐτεῖς*, *αὐτις*, *αὐτάρ*, and *ατάρ*, the first three having all the meanings of the simple *Ἄντε*, and the last two having only the force of *ἀλλά*. *Ἄντε*, *αὐτάρ*, and *ατάρ* always begin a clause, and usually introduce something unexpected.

c. *Μέντοι* = ‘but however’, as a conjunction. As an adverb, it is used in strong protestations, meaning ‘certainly’.

d. *Ομως*, though distinguished by its accent from the adverb *όμως* = ‘equally’, is yet like it derived from *όμος* = ‘one and the same’. The original meaning of *ομως* would seem to have been ‘all the same’, hence ‘nevertheless’. In the dramatists, especially Euripides, *ἀλλ’ ομως* often ends a sentence elliptically, as

(Eur. Elect. 753.) *ῆκονσα κάγω τηλόθεν μὲν, ἀλλ’ ομως =*
I too heard it, at a distance truly, but yet (I heard it).
 So in entreaties, *ἀλλ’ ομως* = ‘but yet do!’

§. 55. **Incessively Copulative Formulae.** These are formed with the aid of the adversative *ἀλλὰ* thus:

<i>οὐ μόνον</i>	...	}
<i>οὐ μόνον οὖτι</i>	...	
<i>οὐχ</i> or <i>μη</i> <i>οὖτι</i>	...	
<i>οὐχ</i> or <i>μη</i> <i>οπως</i>	...	
<i>οὐχ οἶν</i>	...	

οὐχ οἵσον ... *ἀλλὰ καὶ* = not only ... but also.

The addition of *καὶ* is often dispensed with. The construction is elliptical wherever *οὖτι* or *οπως* is used, as
οὐ μόνον οὖτι ἄνδρες ἀλλὰ καὶ γυναῖκες διπλέζονται =
 not only men but women too are arming,
 where *οὖτι* may be accounted for by the ellipsis of *ἔρω*,
 which would give as the full meaning ‘I shall say not only that men, but that women too are arming’. The

Greek *οὐχ ὅτι* is paralleled by the Italian *non che*; compare

οὐχ ὅτι εἶτρεσεν ἀλλ' ἔφυγεν =

he *not only* trembled, *but* he fled.

rispetto non che ad una parte, ma a tutte le cose insieme = respect *not only* to one part, *but* to all the things together.

Obs. 1. *Oὐχ ὅτι . . . ἀλλά* adversative. In the above examples, the clause introduced by *ἀλλά* is augmentative of the clause preceding: sometimes however it is truly adversative, and then *οὐχ ὅτι* and its equivalents may be rendered 'not only not', as

οὐχ' ὅτι ἔφυγεν ἀλλ' ἐνίκησεν =

not that he fled, *but that* he conquered i. e.

not only did he *not* flee, *but* he conquered.

This is always the meaning of *οὐχ ὅτι* and its synomyes when the second clause is negatived by *οὐδέ* = 'not even', as

μὴ ὅπως ὀρχεῖσθαι ἐν δυνθμῷ, ἀλλ' οὐδ' ὀρθοῦσθαι ηδύνασθε = *not only* could you *not* dance, *but you could not even stand upright.*

Obs. 2. *Oὐχ ὅτι* = *Nendum*. When the incessive verb stands first, *οὐχ ὅτι* or some one of its equivalents introducing the second clause, and *ἀλλά* being omitted altogether, *οὐχ ὅτι* and its equivalents correspond to the Latin *nendum* = 'not to say', 'not to mention', 'let alone', as

ἔφυγεν, οὐχ ὅπως ἔτρεσεν =

he fled, *not to mention* his trembling.

ἄχοηστον καὶ γυναιξὶ, μὴ ὅτι ἀνδράσιν =

useless even to women, let alone men.

Here again compare the Italian: — *i fortissimi uomini non che le tenere donne, hanno già molte volte vinti* = 'the strongest men, *not to mention* the delicate ladies, have already many a time conquered'. Other Greek equivalents of *nendum* are *μήτοιγε δή*, *μή τι γε δή*, and *σχολῆ γε*.

§. 56. Disjunctive Conjunctions. a. Positive disjunction is effected as follows,

ἢ . . . ἢ *ἢτε . . . ἢτε* (Homeric) *ἢτοι** . . . *ἢ* *ἢτοι* (Attic, rare) { = either . . . or,

*ἢτοι** . . . *ἢ* (Attic) = either surely . . . or,

ἢ . . . *ἢτοι* (Attic, rare) = either . . . or surely.

* This Attic *ἢτοι* must not be confounded with the Epic *ἢτοι* = *ἢ τοι* = *assuredly* (§. 49.).

These conjunctions do not necessarily go in pairs: they also occur singly; and they may be repeated any number of times.

b. Hypothetical disjunction is effected as follows,

$\varepsilon\iota\tau\epsilon$... $\varepsilon\iota\tau\epsilon$	(poetic)	with forms of the Sub- junctive Group	} = whether... or, be it... be it.
$\varepsilon\iota\tau\epsilon$... $\tilde{\eta}$			
$\tilde{\eta}$... $\varepsilon\iota\tau\epsilon$			
$\varepsilon\iota$... $\varepsilon\iota\tau\epsilon$			
$\varepsilon\acute{a}\nu\tau\epsilon$... $\varepsilon\acute{a}\nu\tau\epsilon$			
$\tilde{\eta}\nu\tau\epsilon$... $\tilde{\eta}\nu\tau\epsilon$			
$\ddot{\alpha}\nu\tau\epsilon$... $\ddot{\alpha}\nu\tau\epsilon$			

These forms also may be repeated any number of times: $\varepsilon\iota\tau\epsilon$ alone occurs singly, and almost exclusively in poetry, as (Soph. Oed. T. 517.)

$\lambda\acute{o}gouisiv \varepsilon\iota\tau' \tilde{\eta}\acute{o}gouisiv$ = by word or deed.

c. Negative disjunction is effected as follows,

$\o\acute{u}\tau\epsilon$... $\o\acute{u}\tau\epsilon$	} = neither... nor,
$\mu\acute{h}\tau\epsilon$... $\mu\acute{h}\tau\epsilon$	
$\o\acute{u}$... $\o\acute{u}\tau\epsilon$	= not... nor,
$\o\acute{u}\tau\epsilon$... $\o\acute{u}$	= neither... not,
$\o\acute{u}\delta\acute{e}$... $\o\acute{u}\tau\epsilon$	= but not... nor,
$\o\acute{u}\tau\epsilon$... $\o\acute{u}\delta\acute{e}$	= neither... nor yet,
$\o\acute{u}\delta\acute{e}$... $\o\acute{u}\delta\acute{e}$	} = but not... nor yet.
$\mu\eta\delta\acute{e}$... $\mu\eta\delta\acute{e}$	

The compounds of $\mu\acute{h}$ are of course to be used wherever the nature of the sentence would require negation by $\mu\acute{h}$ (§. 48.). It is important to mark the difference between $\o\acute{u}\tau\epsilon$... $\o\acute{u}\tau\epsilon$, and $\o\acute{u}\delta\acute{e}$... $\o\acute{u}\delta\acute{e}$. The first $\o\acute{u}\delta\acute{e}$ is always continuative, *also not, and not, but not*, as the sense may require; whereas the first $\o\acute{u}\tau\epsilon$ makes no reference to what precedes. Then the second $\o\acute{u}\delta\acute{e}$ = *nor yet* is more forcible than the second $\o\acute{u}\tau\epsilon$ = *nor* simply.

The negatively disjunctive forms may also be repeated any number of times. The only ones that often occur singly are $\o\acute{u}\delta\acute{e}$, $\mu\eta\delta\acute{e}$, and they do so both as true

conjunctions and as adverbs. As conjunctions, they have a continuative and more or less strongly adversative force, as

οὐδ' ἀρα τώγε ιδών γῆθησεν Ἀχιλλεύς =

but truly, seeing these two, Achilles did *not* rejoice.

δόλῳ οὐδὲ βίηφιν = by fraud, (*but*) *not* by force.

As an adverb, οὐδέ = *ne . . . quidem* = 'not even'.

Obs. 1. Combination of Copulatives and Disjunctives. The following formulae occur

οὐτε . . . τέ	τέ . . . οὐδέ
οὐτε . . . καὶ (rare)	οὐδὲ . . . τε
οὐτε . . . δέ	οὐδὲ . . . καὶ

E. G. οὐτε τάλλα οἶμαι κακὸς εἶναι ἀνθρώπος, φθονερός τε ἡκιστ', ἀν ἀνθρώπων = I don't think myself a bad man in other respects; and I should think myself least of all men envious.

Obs. 2. Copulatives obtained from Disjunctives. In Epic, and sometimes in tragedy, ἢ with μέν δέ suffixed becomes copulative, so that

ἢμέν . . . ἢδέ = καὶ . . . καὶ,

ἰδέ being used for ἢδέ where the metre requires it. This formation of copulatives from disjunctives will appear less strange, if it be considered that, in English, 'either . . . or' are sometimes in effect equivalent to 'both . . . and': thus 'I can teach either Latin or Greek', differs from 'I can teach both Latin and Greek' merely in the aspect under which the particulars are presented, which is alternative in the former, and cumulative in the latter.

§. 57. Causal Conjunctions. A clause assigning the reason of a preceding statement is introduced by γάρ = 'for', which never begins its clause, and generally stands second, as

λέγε· σὺ γάρ οἶσθα = speak, for you know.

Very often, especially in Herodotus, the γάρ clause precedes that containing the statement for which a reason is assigned; and in that case, if the Greek order be preserved in the translation, γάρ is translated *because*. Thus (Herod. VI. 102. 5.)

καὶ, ἦν γάρ ὁ Μαραθὼν ἐπιτηδεώτατον χωρίον τῆς Ἀττικῆς ἐνιππεῦσαι . . . ἐς τοῦτο σφι κατηγέετο Ἰππίας =

and, *because* Marathon was the most suitable place in Attica for entering with cavalry, Hippias landed at this part of it.

The proper Greek equivalents of *because* are $\delta\tau\iota$, $\delta i\acute{o}\tau\iota$,* $\delta i\acute{o}\pi\epsilon\varrho$, $\delta i\acute{o}\tau\iota\pi\epsilon\varrho$, the first being the weakest, and the last two the strongest forms. But $\gamma\acute{a}\rho$ is not always causal: being compounded of $\gamma\acute{e}$ = *verily*, and $\ddot{\alpha}\rho\alpha$ (§. 49.), its force is often merely continuative and emphatic, and is variously rendered, as

$\kappa\acute{a}\iota\gamma\acute{a}\rho$ = and in fact, $\pi\tilde{\omega}\varsigma\gamma\acute{a}\rho$; = how (so) then?

§. 58. **Illative Conjunctions.** The conclusion from a preceding statement is introduced by $o\acute{v}\nu$, $\ddot{\alpha}\rho\alpha$, $\tau o\acute{v}v\nu$, $\tau o\acute{v}g\acute{a}\rho$, $\tau o\acute{v}g\acute{a}\rho\tau\iota$, all in the sense of *therefore* by whatever other word they may be translated, as

$o\acute{v}\tau\omega\kappa o\acute{v}\nu\tau\iota\ddot{\alpha}\rho\alpha\chi\acute{a}\rho\tilde{\chi}\kappa\acute{a}\iota\lambda\acute{u}\pi\eta\delta\acute{a}\kappa\varrho\nu\acute{a}\acute{e}\sigma\tau\iota\nu$ =
thus *then* tears are common to joy and grief.

$O\acute{v}\nu$, $\ddot{\alpha}\rho\alpha$ and $\tau o\acute{v}v\nu$ stand generally second, never first; on the other hand, $\tau o\acute{v}g\acute{a}\rho$ generally begins the clause, and $\tau o\acute{v}g\acute{a}\rho\tau\iota$ always. In the lyric, tragic, and comic poets, the properly interrogative $\ddot{\alpha}\rho\alpha$ occurs sometimes with an illative meaning (Jelf. §. 789. Obs.). The illative force neither of $o\acute{v}\nu$ nor of $\ddot{\alpha}\rho\alpha$ was fully developed till after Homer. He, as well as Pindar, uses $o\acute{v}\nu$ chiefly after pronouns and conjunctions, to fortify their meaning (§. 30. Obs. c.).

Obs. $O\acute{v}\kappa o\acute{v}\nu\sim o\acute{v}\kappa o\acute{v}\nu$. Used positively, $o\acute{v}\kappa o\acute{v}\nu$ = 'therefore not', $o\acute{v}\kappa o\acute{v}\nu$ = 'therefore', as

$o\acute{v}\kappa o\acute{v}\nu\alpha\acute{l}\sigma\chi\varrho\dot{\alpha}\varsigma\varphi\alpha\pi\tilde{\eta}\acute{e}\nu o\acute{l}\varsigma\gamma\acute{e}\delta\acute{a}\rho\tilde{\chi}\varsigma$ =
so *then* you will *not* show yourself base in whatever you do.

• $o\acute{v}\kappa o\acute{v}\nu\acute{u}\pi\acute{o}\acute{l}\kappa\iota\pi\kappa\delta\acute{o}\acute{u}\kappa\acute{e}\nu\acute{e}\iota\nu$ = so *then* slavery awaits us.

* When the declarative $\tilde{\delta}\tau\iota$ came to be used causally, $\delta i\acute{\alpha}$ = 'on account of' was prefixed, just as we say *in that*, *for that*, in the sense of *because*. Compare also with $\delta i\acute{o}\tau\iota$ the Modern Greek $\delta i\acute{\alpha}\nu\acute{\alpha}$ 'in order that', in which $\delta i\acute{\alpha}$ strengthens a truncated form of $\tilde{\iota}\nu\acute{\alpha}$, exactly as in $\delta i\acute{o}\tau\iota$ it strengthens $\tilde{\delta}\tau\iota$.

The accent is on that element which gives character to the word. The disappearance of all negative meaning from *οὐκοῦν* is accounted for by supposing that its normal use had formerly been interrogative, in which case *οὐκοῦν*; = *nonne?*, and that the interrogative form, which gave of course a positively illative meaning, had been at length overlooked. *Οὐκοῦν* is never interrogative now, unless indeed an interrogative turn be given to the translation of it when used ironically: *οὐκοῦν* however is used interrogatively and answers to *nonne*, as

οὐκοῦν γελῶς ἡδιστος εἰς ἔχθρον γελᾶν; =

is it *not then* the sweetest laughter, laughing at one's enemies?

It is a peculiarity of Herodotus to express what is virtually a conditional clause by *οὐκων* used interrogatively, as (Herod. IV. 118. 10.)

οὐκων ποιήσετε ταῦτα; ήμεῖς ... ή ἐκλείψομεν τὴν χώρην =
will you not do these things? } we shall either leave the
i. e. if you shall not do these things, } country &c.

§. 59. Subordinating Conjunctions. The function of subordinating conjunctions is to connect *dependent* clauses with a principal one, the dependent clauses so connected being either *substantival* or *adverbial* (§. 1. Obs. 4.). Here follows a list of the conjunctions which introduce these two kinds of clauses respectively:

<i>Clause</i>	<i>Stating</i>	<i>Introduced by</i>
Substantival	{ what fact, what question, what fear, in what place, at what time,	<i>ὅτι, ὡς</i> = that, <i>πότερον, εἰ</i> = whether, <i>μή</i> = lest, <i>οθεν κ. τ. λ.</i> = whence &c. <i>(§. 49. Obs. 4.),</i> <i>ὅτε, ὅπότε, ἐπει, ἐπειδή,</i> the four corresponding forms in <i>-αν</i> , <i>ήνικα</i> , <i>ώς</i> , all = when: <i>ποίν</i> = before: <i>ἕως, ὅφρα (ο φρα)</i> = till, <i>ὅπως</i> = how, <i>ὅτι, διότι</i> = because,
Adverbial	on what condition, with what aim, with what result,	<i>εἰ, ἐάν (ἢν, ὅν)</i> = if, <i>ώς, ὅπως, ὅφρα, ἵνα</i> = in order that, <i>ὡστε</i> = so that.

The above conjunctions are relative in their nature and origin, except *εἰ* with its compounds, *ἵνα*, and *μή*.

Donaldson (New Cratylus §. 139.) derives *εἰ* from the dative of *ἴ* (old nominative of *οὐ*) = 'on this (condition)', hence 'if'; and *ἴνα* = 'in order that', which occurs also in the sense of 'where', may have been derived from a relative form corresponding to the interrogative *τίς*. However this may be, the prevalent relative nature of the above conjunctions shews that the subordination of clauses by them, as by the relative pronoun itself, belongs to the same stage of the language as the relative use of *δ* ή *τό* (§. 4.).

Obs. 1. *"Ως ~ ως.* Accented *ως* = *thus, so*, is an adverb, the indeclinable form of *ος* demonstrative (§. 3. Obs. 2. a.). Unaccented *ως* = *how, as, that*, is a conjunction, the indeclinable form of *ος* relative, the neuter of which* is itself used in Homer in the sense of *ως*, as (Il. I. 120.)

λεύσσετε γὰρ τό γε πάντες, οὐ μοι γέρας ἔρχεται ἄλλη =
for ye all see this *that* my reward goes elsewhere.

Here *how* might be substituted for *that* in the English, so that *ως* = *οὐτι*, which form may be seen in Il. IX. 493, 534 arising out of the same use of *ο* which is exemplified above. Even the relative *ως* however is accented when it stands after that with which something is compared, as *θεὸς ως* = 'like a god'.

a. The intensive force of *ως* with some adverbs in the positive degree may be due to an ellipsis as in the case of the superlative degree (§. 23. Obs. a.), as

ως ἀληθῶς = in very truth.

But with quantitative adverbs, *ως* has the same qualifying force as it has with numerals,

ως πάντα
ως μάλα
ως ἐπὶ τὸ πολύ
ως πέντε μάλιστα

} = for the most part,

= about five at most.

b. The use of *ως* with prepositions can be illustrated by its use with participles (§. 46. b. *Cause*), for the prepositional phrases so introduced imply participial clauses, as

* Other neuter pronouns are used adverbially: *τί* = 'wherefore' constantly in the sense of *for what reason*, sometimes in that of *for what purpose*, as

τί βούλεται Κῦρος ἡμῖν χρῆσθαι; =

for what purpose does Cyrus wish to employ us?

In the sense of an emphatic *therefore*, *αὐτὰ ταῦτα* is found, as

αὐτὰ ταῦτα καὶ νῦν ἡνω παρά σε =

for this very reason am I now come to you.

ἀνήγοντο ὡς ἐπὶ ναυμαχίαν =
 ἀνήγοντο ὡς ναυμαχήσοντες =
 they set sail as for a sea fight.

As the prepositions most often introduced by *ὡς* are *πρός*, *ἐπί*, *εἰς*, with the accusative, *ὡς* alone came to be used instead of these prepositions so construed, in the case of *persons* especially, and also sometimes of towns and countries when the names of these are put for the inhabitants. This usage is most common in Attic Greek, but occurs also in Homer. In the case of *things*, the preposition proper must be subjoined to *ὡς*.

c. The variety of conjunctional power in *ὡς* is noteworthy. It answers to

where, in the later Doric,
 when, like our temporal *as*,
 how,
 that, declarative, as 'I say that &c.
 that, causal = seeing that, as,
 that, final = in order that,
 that, consequential = so that.

Obs. 2. *Μή* = least. *Μή* has this meaning after verbs of fearing and doubting, a conjunctional use of it which arose out of the adverbial. As after verbs of *denying* (§. 48. Obs. 4. b.), the thing denied is subjoined in English, but in Greek the denial itself; so after verbs of fearing, the thing feared is subjoined in English, but in Greek the fear itself under the form of a wish, as in French.

δέδοικα μὴ ξλογγ = je crains qu'il ne vienne =
 I fear — let him *not* come i. e. — *lest* he come.

Fears regarding the future are expressed by forms of the Subjunctive Group or of the Optative, according as the verb of fearing itself is in an unaugmented or augmented tense; also sometimes by the future Indicative. Fears regarding the past (§. 40. Obs. 1. a.) are expressed by the Indicative, as (Thuc. III. 53. 2.)

νῦν δὲ φοβούμεθα μὴ ἀμφοτέρων ἀμα ἡμαρτήκαμεν =
 but now we are afraid lest we have missed both at once.

For the purpose of negativing the subjoined clause, a second negative is introduced into it exactly as in French. Compare

δέδοικα μὴ ἀποθάνη } = I fear he will die.
 je crains qu'il *ne* meure }

δέδοικα μὴ οὐκ ἀποθάνη } = I fear he will not die.
 je crains qu'il *ne* meure *pas* }

Sometimes *ὅτι*, and in Attic poetry *ὅπως*, precedes *μή*, which both proves that the conjunctional force of *μή* was developed out of the adverbial, and completes the parallel with the French, as (Xen. Cyr. α.)

φοβεῖται . . . ὅτι μὴ πάντα τὰ ἔσχατα πάθη =
il craint qui' il ne subisse toutes les extrémités =
he fears he may suffer the very uttermost.

With ὅπως, the parallel between Greek and Latin is complete even to the way of expressing the negative, as (Soph. Oed. R. 1074),

{ δέδοιχ ὅπως μὴ καὶ τῆς σιωπῆς τῆσδ' ἀναφένεται κακό =
{ I fear that out of this silence ills will burst forth.
{ vereor ne veniat = I fear that he will come.
{ (Eur. Iph. T. 995.) τὴν θεὸν δ' ὅπως λάθω δέδοικα =
{ I fear that I shall not escape the observation of the goddess.
{ vereor ut veniat = I fear that he will not come.

INTERJECTIONS.

Interjections are indeclinable words thrown in to represent the emotions of the speaker.

§. 60. **Interjections** ~ **Adverbs**. Interjections are for the most part instinctive cries written down; and the simplest of them are common to all languages. They were classed with adverbs by the ancient Greeks, and were first treated of separately by the Roman grammarians, who invented the name *interjectio*, apparently in contrast to *præpositio*; *ponere* aptly characterising the use of prepositions as deliberate, *jacere* aptly characterising the use of interjections as impulsive. Attempts have been made to classify interjections according to the emotions they express; but, as it is impossible to define satisfactorily the shades of *thought* denoted by the Greek particles, so it is impossible to define satisfactorily the shades of *passion* denoted by the interjections. Often indeed the same interjection refers to opposite passions, *οἴμοι τάλας* = Oh wretched me! *οἴμ' ὡς ἥδομαι* = Oh, how I am delighted!

PART II. SYNTAX OF WORDS.

§. 61. **Concord and Government.** One and the same principle underlies both concord and government, namely that of marking by outward signs inward relations, i. e. in Greek of marking by word-endings the relations which exist among ideas in the mind. Concord includes all constructions in which the substantive, whether subject or object is the *magistral* word, i. e. gives law to whatever substantives, adjectives, pronouns, verbs belong to it, these parts of speech assuming a termination in as many particulars as possible like that of the magistral substantive. Government again includes all constructions in which the substantive, always *object* in this case, is the *subservient* word assuming a form that marks its dependence on some other substantive, some adjective, some verb, or some preposition. In Concord, the substantive is, as it were, a syntactical chief, and all his followers wear the same badge as himself: in Government, the substantive appears, as it were, in various conditions of servitude, and is dressed each time according to the particular function he discharges. Congruity therefore underlies *government* no less than it underlies *concord*. Thus in

ἀπέχομαι οἴνου = I abstain from wine,
ἀπέχομαι is said to *govern* *οἴνου* in the genitive: in reality *ἀπέχομαι* is followed by the genitive because of a *congruity* subsisting between the force of the genitive case-ending (which denotes the relation *from*), and the meaning of *ἀπέχομαι* (I keep myself *from*).

§. 62. **Apposition.** The simplest form of apposition is that of noun with noun; and, to shew that both

nouns refer to the same person or thing, they are put in the same case, as

'Ανδρομέδα τέκνον ἐμόν = Andromeda my child.

Apposition however may be predicated; and the verbs used for that purpose, and called therefore *appositive* verbs, may be thus classified:

Substantive verbs, *εἶναι*, *γίγνεσθαι*, *υπάρχειν*, *φῦναι*, *τυγχάνειν*, *λαγχάνειν*, *ἔχω* (= continue), *κυρεῖν*, *πέλεσθαι* (the last two poetic);

Verbs of *seeming*, *φαίνομαι*, *δοκέω*, *ἴοικα*.

Verbs of *motion*, *στείχω*, *ῆκω* κ. τ. λ.

Verbs of *posture*, *ἵσταμαι*, *κεῖμαι* κ. τ. λ.

Passive verbs of *naming* and *deeming*, together with the active forms, *κλύω*, *ἀκούω*, used in the passive sense of 'I am called or considered'.

These all take the same case after as before them, because what follows them refers to the same person or thing as the noun preceding, as

ἔλαχε τειχοποιός = he became by lot superintendent of the walls.

οὐ ψεύστης ἀκούσομαι ἔγώ = I shall not be called a liar.

The most common exceptions are connected with proper names. Names of places, when mentioned after their general designation, *city*, *harbour*, &c. often submit to a regimen, as

(Hom.) *'Ιλίου πτολεθρον* = city of Troy,

(Thuc. IV. 46. 1.) *ἐν τῷ ὄρει τῆς Ἰστώνης* =

in the mountain of Istone.

Also, when cited merely as names, when forming a list, and when repeated for the purpose of more minute description, proper names often decline apposition, as

(Herod. I. 199. 17.) *Μύλιττα δὲ καλέουσι Ἀφροδίτην Ἀσύριοι* = now the Assyrians call Aphrodite Mylitta.

(Il. VI. 395.) *'Ανδρομάχη, θυγάτηρ μεγαλήτορος Ἡετίωνος*, *Ἡετίων ὅς ἔναιεν* κ. τ. λ. = Andromache, daughter of the great-hearted Eetion, Eetion who dwelt &c.

A nominative, whether of a proper name or not, is often found at the beginning of a sentence out of syntactical connection with what follows merely because the writer began his sentence without foreseeing how it would end, as (Xen. An. VII. 6. 37.)

'Τι μείς δὲ . . . νῦν δὴ καιρὸς ύμῖν δοκεῖ εἶναι; — You then . . . does it now seem to you to be just the time? If the word placed in apposition to a noun be adjectival in nature, then the concord must be in gender and number, as well as in case (§. 63.).

Obs. **Peculiarities.** *a.* The particle *ὡς* — *as*, used sometimes to interpret apposition, is commonly omitted, as

ήκεις μοι σωτῆρ — thou art come (as) my deliverer.

τοὺς φίλους μαρτυρας παρέχω —

I adduce my friends (as) witnesses.

b. *Ἄνηρ*, in apposition with the name of an employment, denotes that that employment is not the temporary occupation, but the profession of the man, as

ἄνηρ μάντις — a soothsayer by profession:

μάντις alone may denote merely a man who for the time being acts as a soothsayer.

c. Contrary to the English idiom, specifications of quantity are sometimes put in apposition to their general designation, as

πρόσοδος ἔξηκοντα τάλαντα — a revenue of sixty talents.

d. Sometimes also, partitives are found in apposition to the total to which they refer, as

ἀκούομεν νῦν αἱς . . . εἰνὶους σκηνοῦν ἐν ταῖς οἰκίαις —
we hear that *some of you* are quartering in the houses.

This apposition is most common when several partitives refer to one whole, as

οἰκίαι, αἱ μὲν πολλαὶ ἐπεπτώκεσσαν, ὀλίγαι δὲ περιῆσσαν — *most of the houses* had fallen, and but few remained.

e. Similarly, when there is no partitive word properly so called, the whole and the part, particularly when the whole of a person is denoted by a pronoun, and some part of his body is then mentioned, are often put in apposition by the poets, particularly by Homer, as

(Il. XIV. 218.) *τόν φάοις ἔμβαλεν χερσίν* —
she put it *into her hands*.

(Soph. Phil. 1301.) *μέθες με . . . χεῖρα* — let go *my hand*.

f. One of the words in apposition is sometimes not formally expressed, but implied in some other word, often in a possessive adjective pronoun, as

*Ἄθηναῖος ὁν πόλεως τῆς μεγίστης =
being a citizen of Athens, a city the greatest,
τὰ μὲ τοῦ δυστήνον κακά =
the ills of unfortunate me..*

g. Words in apposition to a sentence used without the article, and not itself representing any particular case, are put in the accusative commonly, but sometimes in the nominative, to agree apparently with the most important noun in the sentence, as

*Ἐλένην κτάνωμεν, Μενέλεω λύπην πικράν =
let us slay Helen, (which would be) a bitter grief to Menelaus.
στέφη μιαίνεται, πόλει τ' ὄνειδος καὶ θεῶν ἀτιμία =
our garlands are profaned, both a dishonour to the city and an insult to the gods.*

h. The substantival *τι* = 'somewhat' declines all concord in apposition, as (Gal. II, 16.)

*ἀπὸ δὲ τῶν δοκούντων εἶναι τι =
but of those who seemed to be somewhat.*

§. 63. **Concord of the Adjective with the Noun in Gender, Number and Case.** This concord obtains whether the adjective be used *attributively*, or *appositively*, and that with or without predication. Here are examples of predicative apposition in all the cases, illustrating also the concord of the adjective with its noun, or with a personal pronoun representing its noun :

Nom. *Οὗτος ὁρος ἐστὶ δικαιοσύνης =
This is the definition of justice.*

Gen. *ἐδέοντο Κύρου εἶναι προθύμον =
they begged Cyrus to be prompt.*

Dat. *Λακεδαιμονίοις ἀπεῖπε ναύταις εἶναι =
he forbade the Lacedæmonians to be sailors.*

Acc. *Κροῖσος ἐνόμιζεν ἐαυτὸν εἶναι πάντων ὁλβιώτατον =
Croesus thought himself to be of all men the happiest.*

Not unfrequently, the word in an infinitival clause which might be in the genitive or dative, through apposition to a word in the principal clause, is found in the accusative, through apposition to the understood subject of the infinitive, as

συμφέρει αὐτοῖς φίλοις εἶναι μᾶλλον ἢ πολεμίους =
it is their interest to be friends rather than enemies.

Obs. 1. **Difficulties.** If one adjective refer to several substantives, then in the attributive formula, unless perspicuity requires its repetition with each, it is placed only with the first, and agrees with it alone, as

τὸν ἀγαθὸν ἄνδρα καὶ γυναῖκα λέγω =

I mean the good man and woman.

In the appositive form of attribution (§. 8. b.), the adjective referring to several substantives must be plural; and if the substantives denote living creatures, especially *persons*, it takes their gender if they have one in common, and if they have not, prefers the masculine to the feminine, and the feminine to the neuter. If however the substantives denote *things*, the adjective is always neuter if they be of different genders, and neuter preferably even when they are both masculine or both feminine, the *things* being regarded as genderless, as

ἡ μῆτηρ καὶ ἡ θυγάτηρ αἱ καλαὶ =

the beautiful mother and daughter,

γυναικες καὶ παιδία καθῆμεναι =

women and children sitting,

ταραχαὶ καὶ στάσεις, ὀλέθρια ταῖς πόλεσιν =

troubles and seditions, (things) ruinous to states.

In the predicative formula, the adjective referring to several substantives is under the same laws as in the appositive formula with two exceptions, viz. that it may agree only with the substantive next which it stands, or only with the substantive of preeminent importance, as

Ἄει γάρ τοι ἔρις τε φίλη, πόλεμοί τε, μαχαί τε =

for contention is always welcome to thee, and wars, and battles.

τὸν ἀγαθὸν ἄνδρα καὶ γυναῖκα εὐδαίμονα εἶναι φημι =

I say that the good man and woman are happy.

Obs. 2. **Peculiarities.** a. In translating *more than*, *less than*, the adverbs *πλεῖον* or *πλέον*, *μεῖον* or *ἔλαττον* are generally used in Attic rather than the corresponding adjectives, as

τοξότας, πλέον ἢ δισχιλίους = more than 2000 archers,

Ἄλνν οὐ μεῖον δυοῖν σταδίοιν =

the Halys not less than two stadia (in breadth).

Sometimes, these adverbs like *amplius* and *minus* in Latin, don't affect the syntax at all, as

ἀποκτείνοντι τῶν ἀνδρῶν οὐ μεῖον πεντακοσίους =

they kill no fewer than 500 of the men.

b. Such poetic forms as

ἐμὰ οὐδεα θύμον = the woes of my heart,

are explained by considering *οὐδεα θύμον* as forming a complex idea, *heart-woes*.

c. The adjective is said to be used *proleptically*, when it denotes, not a quality already predictable of the substantive, but one which will become so, when the operation denoted by an accompanying verb has been completed, as (Aesch. Ag. 1247.)

εὐφῆμον . . . κοίμησον στόμα — (literally)
stop your propitious mouth, i. e.
by silence make your mouth propitious.

Obs. 3. **Exceptions.** a. In gender. Besides the instances accounted for by the *usus ethicus* (§. 10. Obs. 1.), and those which grammarians ascribe in desperation to poetic license or to carelessness (Jelf. §. 390. 1. c. Obs.), the exceptions are twofold, the one set due to the gradual decay of *dual* forms, the other accountable by the *sense-schema* (*σχῆμα πατὰ σύνεσιν*).

The masculine dual of the article, of *αὐτός*, *οὗτος*, *ἐμός*, *μόνος*, *ἀμφότεροι*, *μάταιος*, *ἄξιος*, and of participles is often found with feminine nouns, as (Plato)

τούτω τῷ τέχνα = these two arts,
δύο τινὲ ἔστον ἵδε αἱρχοντες καὶ ἄγοντες =
there are two governing and leading ideas.

The substitution of masculine forms for feminine ones was the first stage in the gradual decay of the dual number; so that the above discords are merely apparent. The inferior power of feminine forms to assert themselves appears in the great number of adjectives ending in *-ος* *-ος* *-ον*, and in those, like *αἰώνιος*, which fluctuate between *-ος* *-ος* *-ον* and *-ος* *-α* *-ον*.

The sense-schema accounts for all those discords in which the adjective or participle takes its gender not from what is said, but from what is meant, as

φίλε τέκνον = dear boy,
τὰ τέλη καταβάντας = the magistrates having gone down,
κονφὸν ἡ νεότης = youth is a giddy thing.

ἀσθενέστερον γυνὴ ἀνδρός = woman is a frailer thing than man.
This *thing*-notion accounts for the neuters *ἀμφότερον* *ἀμφότερα*, *οὐδέτερον* *οὐδέτερα*, in such examples as (Plat. Rep. I. 349.)

ἔστι δέ γε, ἔφη, φρόνιμός τε καὶ ἀγαθὸς ὁ ἄδικος, ὁ δὲ δίκαιος οὐδέτερα = at that rate, said I, the unjust man is both wise and good, the just man *neither*.

Under the sense-schema also come the few instances in which not the gender of the word actually used is followed, but the gender of a synonymous word which has substituted itself for the other in the mind, as (Eur. Tro. 535.).

πᾶσα δὲ γέννα Φρυγῶν . . . ὠρμάθη . . . δώσων κ. τ. λ. =
all the Phrygian people rushed to offer &c.

The masculine **δώσων** was written because the masculine **λαός** had in the mind taken the place of the feminine **γέννα**. In cases of this sort, there is always a considerable distance between the noun and the word that should have agreed with it.

b. In number. Here again, the gradual decay of the dual appears in the use of plural adjectives, and still more frequently of plural participles with dual nouns and pronouns, as

οσσε φαεινά = brilliant eyes,
ἐγελασάτην ούν αμφω βλέψαντες εἰς ἄλληλους =
 accordingly both laughed as they looked at one another.
ἔχω δύο ἄνδρας = I have two men.

In the last example, the noun is plural though the adjective be in its own nature dual.

The sense-schema accounts for the apparent discord of number where the *thing*-notion is introduced, and in the case of collective nouns, as

οἱ παιδεῖς εἰσιν ἀγαρόν = boys are a bore.
ἡ δὲ βουλὴ . . . οὐκ αγνοοῦτες = and the senate, not ignorant,
κραυγὴ ἡν τοῦ στρατεύματος διακελευομένων =
 there arose a noise of the soldiers encouraging one another.

c. In case. Anacoloutha due to the circumstance that a man begins a sentence often without knowing how it is to end, and consequently sometimes ends it in a way grammatically inconsistent with the beginning illustrate nothing but human imperfection. Such is (Xen. Cyr. VII. 5. 37.)

ἐπιθυμῶν ὁ Κῦρος . . . ἔδοξεν αὐτῷ =
 to Cyrus desiring . . . it seemed good.

A regard to euphony accounts for the attraction of the adjective from the nominative into the vocative of the person addressed, as (Theoc. XVII. 66.)

ὄλβιε πῶρε γένοιο = may you be happy boy!

Under the sense-schema may be brought such instances as

δοκεῖ μοι ὄρῶν = it seems to me when I see,
 for **δοκεῖ μοι** = **ἡγοῦμαι**, and **ὄρῶν** accords not with the expression actually written, but with the synonymous one which was running in the mind at the time. So (Soph. El. 479.)

ὑπεστί μοι θράσος ἀδυπνόων κλύονταν ἀρτίως ὄνειρά-
τῶν = confidence steals upon me as I listen to sweetly breathing dreams,

where **ὑπεστί μοι θράσος** = **ἐμὲ θράσος ἔχει**. This anacolouthon is common in Thucydides, and sometimes accounts for the nominative absolute, as (Thuc. IV. 23. 2.)

καὶ τὰ περὶ Πύλου ὑπ' ἀμφοτέρων κατὰ οὐράτος ἐπολεμεῖτο,
Ἀθηναῖοι μὲν . . . τὴν ησον περιπλέοντες = and the war

at Pylus was vigorously carried on by both, the Athenians on the one hand sailing round the island, where *ὑπ' ἀμφοτέρων ἐπολεμεῖτο* = *ἀμφότεροι ἐπολέμοντι*.*

Adjectives which, by limiting the reference of their nouns, have a partitive force, often assume the partitive construction, and this is esteemed an elegance with plural adjectives, whose own proper meaning is not partitive. Thus *οἱ παλαιοὶ τῶν ποιητῶν*, *οἱ χρηστοὶ τῶν ἀνθρώπων* are more elegant expressions than *οἱ παλαιοὶ ποιηταί*, *οἱ χρηστοὶ ἀνθρώποι*. This construction is common in Attic with the partitives *ἡμισυς*, *πολύς*, and with numerals, comparatives, and superlatives, *the adjective taking the gender of the following noun*, as

ὁ ἡμισυς τοῦ ἀριθμοῦ = half the number,

ἡ πολλὴ τῆς Πελοποννήσου = great part of the Peloponnesus. The more common construction, however, in all dialects, particularly when not number but *degree* is in question, is to put the partitive in the *neuter singular*, and the whole in the genitive, as
ἐπὶ πλεῖστον ἀνθρώπων = among the greatest part of mankind,
ἐπὶ μέγα ἔχωρησαν δυνάμεως = they rose to a great pitch of power,

πρὸς τοῦτο καὶροῦ = to this point of time,

εἰς τοσοῦτον τύφου = *in tantum superbiae*,

ἀμήχανον εὐδαιμονίας = an inconceivable pitch of happiness.

There are even examples of a *neuter plural* put partitively with a masculine or feminine noun in the genitive, as (Soph. Oed. C. 923),
φωτῶν ἀθλίων ἵκτηρια = wretched suppliant mortals.

Compare Horace's *vilia rerum*. This usage is common only with quantitative adjectives, and is almost confined to the accusative case. Here however is an example of the dative,

ἐν παντὶ κακοῦ εἶναι = to be in all manner of ills.

§. 64. Genitive Absolute. A noun and participle whose case depends on no other word in the sentence are in Greek put in the genitive, then called *absolute*

* It is worth noticing that anacoloutha in respect of case are all in favour of the nominative (the subject-case), and the accusative (the object-case); for this points to a broad fact in the history of languages. As a language passes from the synthetic to the analytic state, these two cases always survive the others; and so necessary is the distinction between subject and object, that, in the languages of southern Europe, which are even more analytic, so far as cases are concerned, than English, there are yet separate forms for the nominative and accusative of the personal pronouns.

because it is unconnected syntactically with the rest of the sentence. The genitive absolute, because it contains a participle, can express the same variety of circumstances as participles in agreement with the subject or object of a verb (§. 46. b.); and because it implies a clause (§. 1. Obs. 5.), the predicative formula (§. 9. Obs. 2.) must be used when the article accompanies the noun. Thus, not *τοῦ γελῶντος παιδός*, but

τοῦ παιδός γελῶντος { the child laughing, i. e.
or *γελῶντος τοῦ παιδός* { when, because, if, though
the child is laughing.

κατέδαρθε πάνυ πολὺ ἄτε μακρῶν τῶν νυκτῶν οὐσῶν =
he slept a great while as the nights were long.

In the last example, the causal force is brought out by *ἄτε* (§. 46. b. *cause*). Very notable is the use of *ώς* with the genitive absolute for *ὅτι* with the Indicative, as (Xen. An. I. 3. 6.)

*ώς ἔμοῦ λόντος ὅπη ἀν καὶ ὑμεῖς, οὐτω τὴν γνώμην
ἔχετε* = that I go wherever you do, be well assured.

This use of the genitive absolute almost always precedes the principal verb, and is far more frequent with *verba sentiendi*, as *εἰδέναι*, *ἐπιστασθαι*, *νοεῖν*, *ἔχειν γνώμην*, *διακεῖσθαι τὴν γνώμην*, *φροντίζειν*, than with *verba declarandi* as *λέγειν*.

Obs. 1. Peculiarities. The Greek genitive absolute differs from the Latin ablative absolute in the following respects:

a. The noun is sometimes omitted, but only when it can be easily supplied from the context, or when, if the participial were changed into the indicative construction, the subject would not, or at least need not be expressed (§. 65. Obs. 1. b.), as

προιόντων = as they advanced,
σαλπίζοντος = the trumpeter trumpeting.

b. The participle of the substantive verb is hardly ever omitted, as in Latin it necessarily always is: hence

te puerο = *σοῦ παιδός ὄντος* = you being a child.

c. In consequence of the Greek verb possessing active participles of past time, the absolute construction is less frequently employed than in Latin: thus

Cyrus, *Croeso victo*, Lydos sibi subjicit ==
 'Ο Κῦρος τὸν Κροῖσον νικήσας κατεστρέφατο τοὺς Λυδούς == Cyrus conquered Croesus and subjugated the Lydians.

d. Unlike the Latin ablative absolute, the Greek genitive absolute is found in anacolouthon, referring to the subject of a finite verb in another clause, as

ταῦτ' εἰπόντος αὐτοῦ, ἔθοξέ τι λέγειν τῷ Ἀστυάγει ==
 when he spoke thus, he seemed to Astyages to say something worth while.

But this license should be avoided.

Obs. 2. Other Cases taken Absolutely. a. Instances of the nominative absolute which cannot be accounted for on the same principle, as δοκεῖ μοι ὁρῶν (§. 63. Obs. 3. c.), are examples of colloquial inaccuracy invading written composition. Such an instance is (Aristoph. Pac. 934.)

Ἓν', ἐν τὴν κλῆσίᾳ ὡς χρὴ πολεμεῖν λέγων τις, οἵ καθήμενοι ὑπὸ τοῦ δέους λέγωσι κ. τ. λ. == in order that, if any one says in the assembly that we ought to go to war, the audience may through fear say &c.

b. The dative absolute, which is not common, though more so than the nominative absolute, is accounted for by the circumstantial character of the dative case (§. 15.). It expresses the time or some attendant circumstance of an action; and, when expressing time, is often introduced by ἀμά to denote simultaneity, and by ἐπί to denote sequence. When so introduced, it is not properly *absolute*.

τελευτῶντι τῷ ἐνιαυτῷ == at the end of the year,

Κῦρος ἔξελαύνει συντεταγμένῳ τῷ οτρατενματι παντὶ ==

Cyrus marches with his whole army drawn up in order.

The dative absolute must not be confounded with the *dativus ethicus* (§. 15. Obs.) accompanied by a participle as it often is in Ionic, as (Herod. IX. 10.)

θνομένῳ οἴ ἐπὶ τῷ Πέρσῃ, ὁ ἥλιος ἀμανρώθη == whilst he was sacrificing against the Persians, the sun was darkened.

Here θνομένῳ οἴ is the *dativus ethicus*, denoting the person principally concerned.

c. The accusative absolute is common in the neuter gender, and is the regular form of the absolute construction in the case of impersonal verbs:

ταῦτα δὲ γενόμενα == and these things having taken place,
 κυρωθὲν δὲ οὐδέν == and nothing having been determined,
 δόξαντα ταῦτα } == these things having been decreed,
 δόξαν ταῦτα } == it having been said,
 εἰρημένον } == it being base,
 αἰσχρὸν οὖν } == it being lawful,

παρέχον
δέον

= there being an opportunity,
= it being necessary.

When it is considered that the accusative absolute occurs only in the neuter gender; that the subject, when the participle has one, is of the most general kind; and that this construction occurs only in Herodotus and the Attic writers, not at all in the more ancient, it seems allowable to regard it as an instance of that tendency to indeclinability which appears in the coincidence in form of the nom. accus. and voc. cases neuter, and is one feature in the transition of a language from the synthetic to the analytic state — a transition which Greek has been privileged to undergo with unexampled slowness.

d. Highly noteworthy is the accusative absolute introduced by the subjective *ώς* (§. 46. b. *cause*) = *νομίζων*, *νομίζοντες*, a common construction in the masculine and feminine as well as in the neuter, as (Xen. Cyr. I. 3.)

Oι δὲ πολέμιοι, . . . ώς πανσομένοις τοῦ διωγμοῦ, ἐπεὶ σφᾶς ἔδοιεν προσορμήσαντας = But the enemy, *thinking they* (their adversaries) *would cease* from the pursuit, when they (their adversaries) saw them advancing.

§. 65. Concord of the Finite Verb with its Nominative in Number and Person. This rule did not become supreme in Greek till about B. C. 300 when, in consequence of the Macedonian conquests, the *κοινὴ διάλεκτος* was formed. In the most ancient Greek, as in old English, the singular verb is often found with a plural nominative.

a. When the plural subject of the singular verb is masculine or feminine, this is called the *Bœotian* or *Pindaric schema*, because, though found in Homer, Hesiod, and Herodotus, it is still more common in Pindar, as (Pind. Pyth. X. 71.)

ἐν δ' ἀγαθοῖσι κεῖται πατρῷαι κεδναὶ πολίων κυβερνάσιες = for in good men lies the paternal and watchful government of states.

Sometimes the English coincides with this idiom, as (Herod. VII. 34.)

ἔστι δ' ἐπτὰ στάδιοι ἐξ Ἀβύδου ἐς τὴν ἀπαντίον = now it is seven stadii from Abydos to the opposite side. In Attic, masculine and feminine plurals are scarcely

found with any singular verb except the forms *ἔστιν* and *ήν* beginning a sentence, as (Plat. Rep. 463. A.)

ἔστι μέν πον καὶ ἐν ταῖς ἄλλαις πόλεσιν ἄρχοντες καὶ δῆμος; = are there mayhap in other cities also rulers and a public?

Hence *ἔστιν οἽ* = *ἔνιοι* = 'some' (§. 67. Obs. 3. b.). Compare the French 'Il est cent hommes' = 'There are a hundred men'.

b. When a neuter plural is found with a singular verb, the construction is called the *Attic schema* because, though found in Homer and other ancient writers, it was the established rule in the Attic dialect, obtruding itself even where it had no logical justification. Neuters commonly denote *things*; and in relation to things plurality is apt to be confounded with quantity or *mass*, which is singular.

κακοῦ γὰρ ἀνδρὸς δῶρο' ὅνησιν οὐκ ἔχει =

for the gifts of a bad man bring no help.

But when the neuter plural denotes persons, or even things the plurality of which is important, the verb is generally plural even in Attic, as

τὰ μειράκια διαλεγόμενοι ἐπιμέμνηνται Σωκράτους = the boys in their talk make mention of Socrates.

ἀλλ' ὑποχωρούντων φανερὰ ἡ σαν καὶ ἵππων καὶ ἀνθρώπων ἵχνη πολλά = but there were many obvious marks of horses and men retreating.

In such cases, there would be no logical justification for the Attic schema, as neither is there any for the plural instead of the singular neuter of verbals in *-τός* and *-τέος*, and of some other adjectives when used impersonally, as

πιστά ἔστι τοῖς φίλοις = we should trust friends.

τὴν πεπρωμένην μοῖραν ἀδύνατά ἔστιν ἀποφυγεῖν καὶ θεῶ = it is impossible even for the deity to escape the destined fate.

δῆλά ἔστιν, δτι δεῖ ἔνα γέ τινα ἥμαν βασιλέα γενέσθαι = it is plain that at least some one of us must be king.

In these last examples, the singular would be equally good Attic as the plural.

Obs. 1. **Omission of the Verb, or of its Nominative.** *a.* The substantive verb is the only one frequently omitted (§. 9. Obs. 1. c.). A verb of *doing* is said to be omitted after *οὐδὲν ἄλλο η̄* in such phrases as

οὐδὲν ἄλλο η̄ παίζοντιν { — *nihil aliud quam ludunt* { — they do nothing but play.

The license of omission is much greater in proverbs, frequent use enabling the mind to supply the verb, as *η̄ ἀμαξα τὸν βοῦν* i. e. *η̄ ἀμαξα ἐκφέρει τὸν βοῦν*, as we say 'putting the cart before the horse'; *γλαῦκ' εἰς Αθήνας* i. e. *ἄγε γλαῦκ' εἰς Αθήνας*, as we say 'carrying salt to Dysart, or coals to Newcastle'. So in *εἰς κόρακας*, as we say 'go to the dogs', and in short curses, prayers, exhortations, and prohibitions.

b. The unemphatic personal pronouns are omitted in this concord (§. 24. a.): sometimes also the indefinite *τις*, as

ἡδὺ τὸ οἰεσθαι τεύξεσθαι ὡν ἐφίεται —

it is pleasing to think *one* is going to get what *one* desires. The verbs called impersonal have generally for their nominative an infinitive or infinitival clause, as

δεῖ λέγειν — it is necessary to say.

What is necessary? *λέγειν*. Other impersonals again have, or once had, a nominative understood, as

ὕει — it rains i. e. *Ζεὺς ὕει*,

and so of all operations in nature. Some impersonals are said to have acquired in this way their ultimate meaning, as (*ὁ Θεός*) *χρή* — the deity answers by an oracle; hence, *it behoves*. In other impersonals still, the subject must be evolved from the verb itself, as

ἔσαλπιγξεν — he i. e. the trumpeter trumpeted.

So, with the aid of the copula

ἔνδει μοι χρημάτων i. e. *ἔστι μοι ἔνδεια χρημάτων* { — I am in want of money.

μεταμέλει μοι τοντων i. e. *γίγνεται μοι μετάμελος τοντων* { — I repent me of this.

for, although in *language* a verb may stand without a nominative, in *thought* there is no such thing as predication without a subject.

Obs. 2. **Difficulties.** *a.* When the verb is appositive (§. 62.), and the predicate is a substantive or a word used substantively, the verb stands close by the predicate and conforms to it, as

(Plat. Men. 91. c.) *οὐτοί γε (οἱ σοφισταὶ) φανερά ἔστι λόβη τε καὶ διαφθορὰ τῶν συγγιγνομένων* — these sophists are an evident pest and ruin to those who consort with them.

(Thuc. IV. 102. 3.) *χωρίον, ὅπερ πρότερον Ἐννέα Ὀδοί ξηλοῦντο* = a place which was formerly called Nine Ways.

b. If there be several nominatives connected by copulatives, the verb is generally plural, unless they be neuters, in which case the verb is singular by the Attic schema: if they be two making a pair, the verb must be dual. When the nominatives differ in person, the verb prefers the first person to the second, and the second to the third, as

τὴν τέχνην ταύτην ἔγώ τε καὶ ὁ πατὴρ ἀσκοῦμεν =

I and my father practise this craft.

Sometimes however, the verb agrees in both number and person with the subject nearest it, particularly when the verb stands at the beginning or end of a sentence, as

ἐνίκων οὗτοι οἱ ξένοι, καὶ οἵμεις μετ' αὐτῶν =

these strangers conquered, and we with them.

κατὰ φύσιν γὰρ σάρκες καὶ νεῦρα ἐξ αἷματος γίγνεται =

for naturally flesh and sinews are formed of blood.

And in any situation, the verb may be singular when that one of all the nominatives to which the others are subordinate in sense is singular, as

Βασιλεὺς, καὶ οἱ σὺν αὐτῷ, διώκων εἰσπίπτει σὺς τὸ Κυρεῖον στρατόπεδον = the (Persian) King and those with him burst, in the course of their pursuit, into the camp of Cyrus.

Note on the other hand

Δημοσθένης μετὰ τῶν ξυστρατηγῶν σπεύδονται Μαντινεῦσιν = Demosthenes and his fellow-generals make a truce with the Mantineans;

where the verb conforms, by the sense-schema, to the number of the real nominative viz. *Δημοσθένης μετὰ τῶν ξυστρατηγῶν*.

c. When several singular nominatives are connected disjunctively, if the assertion can be true of only one of the subjects at a time, the verb must be singular as,

ἢ οὗτος ἢ ξεῖνος ἀληθῆ λέγει =

either this man or that says the truth.

But when the assertion is true of all the subjects at the same time, the verb is plural, as (Eur. Alc. 360.)

καὶ μ' οὐδ' ὁ Πλούτωνος οὐτον, οὐδ' οὐπὶ κώπη ψυχοπομπὸς ἀν γέρων ἔσχον = and neither Pluto's dog, nor the aged spirit-guide at the oar should prevent me.

The French make the same distinction in the use of *ni l'un ni l'autre*, as

ni l'un ni l'autre n'obtiendra le prix =

neither the one nor the other will get the prize.

j'ai lu vos deux discours : ni l'un ni l'autre ne sont bons,

I have read your two speeches : neither the one nor the other is good.

When the nominatives so connected are of different numbers, the verb agrees with that which is nearest it. When two nominatives are connected by the comparative *ἢ*, the verb agrees in every respect with the nearer of the two, as (Plat. Theaet. 109. a.)

τῶν κοινῶν τι ἄρα διεννοούμην ὡν οὐδὲν οὐ μᾶλλον ἢ τις ἄλλος ἔχει — I meant then some one of those common things in which thou hast no more share than any other.

d. A dual nominative is often found with a plural verb; and sometimes, when the dual nominative, is neuter, with a singular verb by the Attic schema (§. 65. b.). Much more rarely, a dual verb is found with a plural nominative, the object being to shew that the individuals, no matter how many, are divided into two, as (Aesch. Eumen. 255.)

λεύσσετον πάντα — look every where,

with reference to the two halves of the chorus. In Homer, the two numbers are even interchanged, as (Il. VIII. 279.)

μηκέτι, παιδε φίλω, πολεμίζετε μηδὲ μαχεσθον —
no longer, dear children, keep warring and fighting.

e. When in the same clause the plural subject reappears in apposition to itself distributively in the singular, the verb is commonly plural, as

ἔμενον ἐν τῇ ἑαυτοῦ τάξει ἔκαστος —
in suo quisque ordine manserunt —
they remained each in his own rank.

This is called the *οχῆμα καθ' ὅλον καὶ μερος* i. e. the *whole and part schema*, and explains the apparent discord of person in (Aristoph. Av. 1186.)

χώρει δεῦρο πᾶς υπηρέτης — come hither every servant,
and the apparent discord of both number and person in (Il. XIV. 111.)

καὶ μή τι κότῳ ἀγάσσεσθε ἔκαστος —
and be not angry, each of you.

Sometimes, the verb agrees with the singular distributive, close to which it then stands, as (Xen. An. II. 1. 151.)

οὗτοι μὲν ὡς Κλεαρχε ἄλλος ἄλλα λέγει —
these say, one one thing, another another.

§. 66. Accusative with Infinitive. As the subject of a finite verb is expressed in the nominative, so that of the Infinitive is expressed in the accusative. When however the subject of the Infinitive is also the object of a principal verb governing the genitive or the dative, in the former case it appears only as the object of the

principal verb, in the latter it may appear either as the object of the principal verb, or in the accusative as the subject of the Infinitive: as

<i>δέομαι σοῦ ἐλθεῖν</i>	= I beg you to come.
<i>συμβουλεύω σοὶ σωφρονεῖν</i>	= I advise you to be prudent.
<i>συμβουλεύω σὲ σωφρονεῖν</i>	= I advise that you be prudent.

Nevertheless, participles really in apposition to the above genitive or dative are often not formally so, but appear in the accusative, the normal case for the subject of the Infinitive, as

(Lys. 10. 31.) *νῦν δέομαι παταψηφίσασθαι Θεομνήστου, ἐνθυμονυμένους δὲ κ. τ. λ.* = I pray you to give sentence against Theomnestes, remembering &c.
 (Herod. III. 36. 23.) *ἐνετέλλατο τοῖσι θεράπονσι λαβόντας μιν ἀποκτεῖναι* = he charged the attendants to take and kill him.

Sometimes again, but very rarely, the dative required by the principal verb appears in the participle, even when in the noun or pronoun it had yielded to the accusative, as (Soph. Oed. R. 350.)

ἐννέπω σὲ τῷ κηρύγματι ἐμμένειν . . . ὡς ὅντι γῆς μιάστορι = I charge thee to abide by the proclamation . . . land's polluter as thou art.

Obs. **Nominative for Accusative.** When the subject of the principal verb is also the subject of the Infinitive, it stands for both, and words in apposition to the subject of the Infinitive are put in the nominative, agreeing with the subject of the principal verb, as
ὅμολογῷ ἀδικῆσαι = I confess I did wrong.

ἐνομίζομεν ἄξιοι εἶναι = we thought we were worthy.
 This attraction of the subject of the Infinitive into the proper case, for the subject of the finite verb obtains in prepositional phrases and is not barred even by the intervention of *ὡστε*, as

(*Ο δεῖνα*) *διὰ τὸ φιλομαθῆσεν εἶναι* =

So and so because he was fond of learning,

„ *ἐκ τοῦ χαλεπὸς εἶναι* =
 „ from being ill-tempered,
 „ *τῷ δοῦλος εἶναι* =
 „ by being a slave.

(Thuc. I. 12. 1.) *ἡ Ἑλλὰς ἔτι μετανίστατο τε καὶ πατωκίζετο, ὥστε μὴ, ἡ συγάσσασα, αὐξηθῆναι* — Greece was still in a migratory condition seeking new settlements, so that it did not prosper *through repose*.

The subject of the Infinitive is emphasized by means either of *αὐτός* in the nominative, or of a personal pronoun, reflexive if of the third person, in the accusative, placed before the infinitive, as *ἔφη δανεῖσαι τὸν πατέρα Ἀντιμάχῳ, καὶ οὐκ αὐτὸς λαβεῖν* — he said his father had lent to Antimachus, and that *he himself* had received nothing. *φημὶ δεῖν ἔκείνονς μὲν ἀπολέσθαι, ὅτι ἡσέβησαν, εἰ μὲ δὲ σωζεσθαι, ὅτι οὐδὲν ήμάρτηκα* — I say that they indeed ought to perish, because they behaved impiously; but that *I* should be saved because I have done no wrong.

§. 67. Concord of the Relative with its Antecedent in Gender, Number, and Person. The relative construction is in effect attributive, being equivalent to an adjective or participle in concord with the antecedent, as *πάν- { ὅσοι τῆς ἀνθρωπίνης φύσεως μετέχοντι } σφάλτες { οἱ τῆς ἀνθρωπίνης φύσεως μετέχοντες } λονται* — all *who have* or all *having* part in human nature err. When there are several antecedents, the relative is subject to the same laws as the adjective referring to several substantives in the *appositive* formula (§. 63. Obs. 1.). Most of the so-called exceptions to the rule are explicable by the sense-schema, as when a singular antecedent denoting a typical individual, and thereby a whole class, has a plural relative, in other words when *ὅς* = *οἷος*, as

θησαυροποιὸς ἀνὴρ οὓς δὴ ἐπαινεῖ τὸ πλῆθος = a money-making man *such as* of course the multitude praise.

Similarly, the singular *ὅστις*, or *ὅς ἄν* may have *πάντες* for its antecedent, as (Plat. Rep. VIII. 566. D.)

ἀσπάζεται πάντας ὃς ἄν περιτυγχάνη = he salutes all, whomsoever he may meet.

When the relative clause contains a substantive in real apposition to the antecedent, the relative, in Greek as

in Latin, commonly takes the gender of that substantive, as (Herod. VII. 54. 10.)

Περσικὸν ἔλφος τὸν ἀκινάκην καλέουσι =

a Persian sword *which they call acinaces*.

This usage is due to euphony, which is consulted somewhat by the relative taking its gender from a word in its own clause rather than from a word in the antecedent clause. The only discord in respect of person finds a parallel in German: the relative to an antecedent in the vocative may take a verb in the third person, as (Il. X. 278.)

Διὸς τέκος ἦτε μοι αἰεὶ . . . παρίσταται =

O daughter of Jove who *art ever by my side*,

where also the relative may be seen taking the gender not of *τέκος*, but of what *τέκος* means.

Obs. 1. *Attic Attraction*. In Attic with rare exceptions (Thuc. I. 50. 1.), and sometimes even in Homer (Il. V. 265.), the relative is attracted into the case of its antecedent, i. e. agrees with its antecedent in case as well as in gender, number, and person; as

μέμνησθε τοῦ ὁρκοῦ ὃν ὀμωμόκατε } =

μέμνησθε τοῦ ὁρκοῦ οὐ ὀμωμόκατε } =

remember the oath *which you have sworn*.

αὐταῖς μέτερα ἔχει, } τούτοις πάντα τὰλλα ἀσφα-
οῖς οὐσιν μετέροις ἔχει, } λῶς κέντηται =
with what things of yours he has, with these he possesses all the
rest securely.

The object of *Attic attraction* is to bind more intimately together the antecedent and the relative clauses, in furtherance of which end a more compact collocation of the words is common, the antecedent itself being put into the relative clause, as

μέμνησθε οὐ ὀμωμόκατε ὁρκοῦ =

remember what oath you have sworn.

The attraction of the relative from an accusative governed by a verb into the genitive or dative of its antecedent, as in the above examples, is common, is indeed the rule. Examples are found also of the attraction of the relative from the nominative and dative; but these are rare, and are almost confined to instances of the omitted demonstrative antecedent (§. 67. Obs. 3, b.). Attraction is inadmissible when the relative depends for its own proper case on a different preposition from that which governs the antecedent, or on the same preposition used in a different sense. Thus

εἰμι παρ' ἐκείνους παρ' ὡν ἐλαβες τὸ ἀργύριον —

'I am going to those from whom you received the money',
could not suffer attraction.

Obs. 2. Inverse Attraction. This name is given to the attraction of the antecedent into the proper case of the relative, which most frequently happens when the antecedent's own case is the nominative or the accusative, as (Lysias p. 649.)

τὴν οὐσίαν ἥν κατέλιπε τῷ νεεῖ οὐ πλείονος ἀξία ἔστιν —
the property which he left to his son is not worth more.

So in Latin (Aen. I. 572.),

urbem quam statuo vestra est = the city which I found is yours.

Inverse attraction is illustrated by the oblique cases of οὐδεὶς ὅστις οὐ in principal clauses, as

G. οὐδενὸς ὅτου οὐ καταφρονεῖ =
there is no one but he despises.

D. οὐδενὶ ὅτῳ οὐκ ἀρέσκει =
there is no one but he pleases.

A. οὐδένα ὅντινα οὐκ ἀδικεῖ =
there is no one but he wrongs.

In dependent clauses, the same phrase illustrates Attic attraction, as (Xen. Cyr. I. 4. 25.),

οὐδένα ἔφασαν ὅντιν' οὐ δακρύοντ' ἀποστρέφεοθαι =
they said there was not one who did not turn away weeping.

The fact is that, in the Greek mind and mouth, οὐδεὶς ὅστις οὐ = πάντες throughout all cases.

Obs. 3. Omission of the Relative or of the Antecedent. *a.* The omission of the relative when its clause *determines* the antecedent, so common in English, as 'there is the book (which) I bought', is unknown in Greek. But when two clauses are connected by a copulative or adversative conjunction, the relative which introduces the first is seldom repeated in the second, even when, were it repeated, its case would have to be changed. Sometimes it is simply omitted, as (Xen. An. III. 2. 5.)

Ἄριαῖος δὲ, ὃν ήμεῖς ἡθέλομεν βασιλέα καθιστάναι, καὶ (sc. ὡς) ἐδώκαμεν καὶ (sc. παρ' οὐ) ἐλάβομεν πιστὰ μὴ προδώσειν ἀλλήλους κ. τ. λ. — and Ariaeus whom we wished to make king, and (to whom) we gave and (from whom) we received pledges that we should not betray each other &c.

Sometimes however, the omitted relative is represented by a personal pronoun, as (Xen. Cyr. III. 1. 38.).

Ποῦ δὴ ἐκεῖνός ἔστιν ὁ ἀνὴρ, ὃς συνεδήρα ήμῖν, καὶ σύ μοι μάλα ἐδόκεις θαυμάζειν αὐτόν; = Where now is that man who used to bunt with us, and whom you seemed to me greatly to admire!

b. The demonstrative antecedent is frequently omitted, especially when it would stand in the nominative or accusative; and then the Greek relative becomes what in English grammar is called a compound relative i. e. a relative involving a demonstrative pronoun as its antecedent; e. g. "whom the Lord loveth he chasteneth, where *whom* = *him whom*. So in (Xen. Symp. 4. 47.),

Oīs γὰρ μάλιστα τὰ παρόντα ἀρνεῖ, ἥπιστα τῶν ἀλλοτρίων ορεγονται =

for *they who* are most content with what they have are least desirous of other men's goods.

When the demonstrative antecedent is omitted, the relative itself may still be attracted*; and it is then that the rare attraction of the relative from the nominative and dative (§. 67. Obs. 1.) most often occurs, as (Pl. Phaed. p. 69. a.)

τοῦτο δ' ὄμοιόν ἐστιν ω̄ (for ἐκείνῳ ὅ) νῦν δὴ ἐλέγετο =
this is like what (that which) was just now said.

(Xen. Cyr. V. 4. 39.) *ἥγετο δὲ καὶ τῶν ἑαυτοῦ, τῶν τε πιστῶν οīs ηδετο, καὶ ω̄ (for ἐκείνων οīs) ἥπιστει πολλούς =*
and he led with him many of his own people, both of the loyal in whom he delighted, and of those whom he distrusted.

The omission of the demonstrative antecedent appears in the phrase *ἐστιν οī = ἔνιοι =* 'some', which is declined throughout, and governed in the oblique cases by prepositions as well as verbs, as

N. *ἐστιν οī γελῶσιν* = some are laughing..

G. *πλὴν ἐστιν ω̄ν ἄλλων ἐθνῶν* = except some other nations.

D. *ἐστιν παρ' οīs ἐθνεσιν* = with some nations.

A. *ἐστιν ἀ ἐδήσεν* = some (parts) he ravaged.

By the attraction of the relative *οīs* into the case of the omitted demonstrative antecedent, a peculiar combination is formed, commonly with the second personal pronoun and a substantive, which is declinable throughout with or without the article, as

* It may aid the English student to enter into this Attic idiom of attraction, if he consider that, just as the Greek relative is attracted into the case of the omitted demonstrative antecedent, so in English the *demonstrative antecedent* may be attracted into the case of the omitted relative. Thus (Coriolanus V. 5.)

"*Him I accuse*

The city-gates by this has entered".

Also (Antony and Cleopatra III. 1.)

"*Better leave undone than by our deeds acquire
Too high a fame, when him we serve's away*".

N. 'Ο *οἶος* σὺ ἀνὴρ μέγας ἀγαθόν = Such a man as you is a great blessing.

G. ἔραμαι οἶον σοῦ ἀνδρός = I love such a man as you.

D. χαρίζομαι οἶώ σοι ἀνδρόι = I oblige such a man as you.

A. θαυμάζω οἶον σὲ ἀνδρα = I admire such a man as you.

The true nature of this construction appears conspicuously when the pronoun is of a different *number* from the rest of the phrase, for it then remains in the nominative, the proper case of *οἶος* i. e. the case in which *οἶος* would be but for its attraction into the case of the omitted demonstrative antecedent, as

N. Οἱ οἶοι σὺ ἀνδρες μέγας ἀγαθόν = Such men as you are a great blessing.

G. ἔραμαι οἶων σὺ ἀνδρῶν = I love such men as you.

D. χαρίζομαι οἶοις σὺ ἀνδράσιν = I oblige such men as you.

A. θαυμάζω οἶονσ σὺ ἀνδρας = I admire such men as you.

The analysis of the last example would be θαυμάζω τοιούτοις ἀνδρας *οἶος* σὺ εἰ, and similarly of all the others. "Οσος and ήλικος occur, but much more rarely, in a like formula. The pronoun is not always of the second person, as

τῶν οἶωνπερ αὐτὸς ὄντων = of men like him.

And an adjective may take the place of the pronoun, as

ὄντος τοῦ πάγον οἶον δεινοτάτον =

„ „ „ τοιούτον οἶος ἐστι δεινότατος =
the frost being (such as is) most terrible.

In this way no doubt it is that the use of relative words as augmentatives of comparison (§. 23. Obs. a.) is to be accounted for.

Obs. 4. Implicit Antecedents. The antecedent is involved sometimes in a possessive pronoun, sometimes in an adjective, as

(Soph.) τῆς ἐμῆς ἐπεισόδου ὅν μήτ' ὄκνεῖτε κ. τ. λ. =
the approach of me whom neither fear ye &c.

(Thuc.) εἰ δὲ μὲ δεῖ καὶ γυναῖκείας τι ἀρετῆς, ὅσαι νῦν
ἐν γηραιᾳ ἔσονται, μνησθῆναι = if I must also say something
of womanly character with reference to those who will now be in
widowhood.

§. 68. Government of one Substantive by another in the Genitive. For the various kinds of genitive, see §. 13. When denoting persons, or things personified, the genitive in this regimen is called *subjective* or *objective* according as it denotes the *subject* i. e. possessor, or the *object* of what is denoted by the principal substantive, as

	Subjective	Objective
ἀπόστασις τῶν Ἀθηναίων	= revolt <i>of</i> or <i>from</i> the Athenians,	
τὸ Μεγαρέων ψήφισμα	= the decree <i>of</i> or <i>regarding</i> the Megareans,	
ἡδοναὶ τέκνων	= pleasures <i>of</i> or <i>in</i> children,	
ἄλγος ἐταίρων	= grief <i>of</i> or <i>for</i> comrades,	
φροντὶς παιδῶν	= anxiety <i>of</i> or <i>for</i> children,	
ἔχθρα τινός	= enmity <i>of</i> or <i>towards</i> any one,	
αρσένων ἡράτος	= power <i>of</i> or <i>over</i> males.	

The context alone determines whether the genitive is to be interpreted as subjective or objective. And when a mere change of preposition does not suffice to mark it clearly in English, recourse must be had to circumlocution, as

	Subjective	Objective
οἱ τῶν πολεμίων φόβος	= the fear entertained <i>by</i> or <i>of</i> the enemy.	
ἡ ἀγάπη τοῦ Πατρός	= the love cherished <i>by</i> or <i>towards</i> the Father.	

These examples ought to guard the student against supposing that the genitive may be always translated by *of*. The genitive in this regimen always denotes *belonging to*, *connected with* in some way; but in what particular way must be gathered from the context. Hence

ἐπικούρημα τῆς χιόνος	= shelter <i>from</i> the snow,
ἔμμονὴ τοῦ κακοῦ*	= persistance <i>in</i> evil,
τὴν τῆς Αἰτωλίας ξυμφοράν	= the disaster <i>in</i> Aetolia,
ποιηὴ Πατρόκλου	= satisfaction <i>given</i> or <i>taken by</i> Patroclus, or <i>taken by another for him</i> ,
which last it actually means in Homer.	

* When a certain construction has been established on natural grounds in a great majority of instances for a particular part of speech, it becomes the normal construction for that part of speech universally, even where no natural ground for it exists; and conformity to the norm for mere conformity's sake is called *syntactical attraction*. An example is furnished in *ἔμμονὴ τοῦ κακοῦ* = 'persistance in wickedness', where the syntax is not that required by the meaning and agreeable to the verbal phrase *ἔμμενειν τῷ κακῷ*, but that which the substantival form of *ἔμμονὴ* suggests.

The genitive of a personal pronoun, depending apparently on a substantive, is sometimes found where the *dativus ethicus* might have been expected, as (Plat. *Phaed.* p. 117. B.)

ἕως ἂν σον βάρος ἐν τοῖς σκέλεσι γένηται —
till weariness come upon *your* limbs.

For the use of the article with nouns in regimen, see §. 8. Obs. To the general practice of representing the omitted governing noun by the article (§. 8. Obs. b.), there is an exception in the following phrases, in which *οὐδα*, or some similar word must be understood to complete the construction.

εἰς Ἀιδον = to Pluto's, *εἰς διδασκάλον* = to the teacher's,
ἐν Ἀιδον = at Pluto's, *εἰς Πλάτωνος* = to Plato's,
as we say 'to Oliver and Boyd's', 'in St. Paul's'.

Obs. 1. **Compound Regimen.** Theoretically, any number of substantives may be combined by means of successive genitives, so as to express one compound idea; but convenience and intelligibility seldom admit of more than three, as

ἡ τοῦ Σωκράτους σοφίας ἐπιθυμία —
the desire for the wisdom of Socrates,
διὰ τὴν τοῦ ἀνέμου ἀπωσιν αὐτῶν ἐς τὸ πέλαγος —
because of the wind's drifting them (the wrecks) to sea.

In the former example, one of the two genitives depends on the other; in the latter, both genitives depend on the same principal substantive *ἀπωσιν*. Here is an example of four substantives combined, each of the genitives depending on the substantive preceding it: (II. Cor. 4. 4.)

τῶν φωτισμὸν τοῦ εὐαγγελίου τῆς δόξης τοῦ Χριστοῦ =
the light of the gospel of the glory of Christ.

Obs. 2. **Dative with Nouns.** In poetry, and sometimes in prose, the *dativus ethicus*, especially of personal pronouns, is used instead of the genitive, as

ἡ γάρ μοι ψυχή = for *in my case* the soul = for my soul.

In both prose and poetry, the *dativus commodi et incommodi* is common, as

τοῖς ἀσθενεσι τροφή = food for the infirm,
θεοῖς δωρήματα = gifts for the gods,
τοῖς φίλοις βοήθεια = assistance to friends.

The genitive would be obscure or ambiguous in the place of these datives, so that here syntactical attraction (§. 68.*) gives way to the need of precision. So markedly different is the force of the dative from that of the genitive with nouns, that the same principal noun may have both a genitive and a dative depending on it, as

$\eta\tau\omega\vartheta\epsilon\omega\delta\omega\sigma\iota\sigma\iota\mu\iota\tau$ = God's gift to you,

$\eta\pi\omega\lambda\epsilon\omega\pi\iota\mu\iota\delta\alpha\pi\omega\lambda\epsilon\sigma\iota\tau$ = the intercourse of states with states.

In these examples, as in some of the preceding ones, the dative is due to the *verbal* meaning and associations of the principal substantive.

§. 69. Adjectives governing the Genitive.* The kinds of genitive (§. 13.) found with adjectives are the partitive, the privative, the local, the causal and the comparative. Accordingly, the adjectives governing the genitive are

a. Partitives. For examples, see §. 63. Obs. 3. c.

b. Privatives, and their opposites. Under this heading, besides almost all adjectives compounded with α privative †, are comprehended adjectives denoting *separation* or *participation*, *want* or *plenty*, *failure* or *success*, as

* The question, what case should follow an adjective in Greek, corresponds to the question what preposition should follow it in English; and the English preposition is generally a safe guide to the Greek case, provided the meaning of the adjective be expressed by a neuter form in English. This condition is necessary, because, from the paucity of adjectives proper in English, and the substitution of participles passive for them, the aspect of the adjective in English is often that of a *state produced*, not that of a *resident quality*, which is the proper adjectival aspect. Thus, if 'experienced in affairs' be turned into 'having experience of affairs', the Greek case will be suggested, $\xi\mu\pi\epsilon\iota\varrho\sigma\pi\varrho\alpha\gamma\mu\alpha\tau\omega\tau$.

† These compounds with α privative are often, especially by the poets, used with cognate substantives tautologically, as

(Xen. Cyr. IV. 6. 2.) $\alpha\pi\omega\iota\sigma\delta\epsilon\iota\mu\iota\alpha\delta\delta\epsilon\eta\omega\pi\omega\iota\delta\omega\tau$ = male children have I none.

(Soph. Oed. Col. 677.) $\alpha\eta\eta\epsilon\mu\sigma\pi\omega\iota\tau\omega\pi\omega\iota\mu\omega\eta\omega\tau$ = sheltered from all storms.

κακῶν ἄγευστος = without experience of misfortune,
οὐδὲν ἀλλότριον ποιῶν τῆς ἑαυτοῦ πατρίδος =
doing nothing alien from i. e. contrary to the interest
of his country,

μέτηχος ἀρετῆς = having a share of virtue,
πόλις μεστὴ ἐμπόρων = a city full of merchants,
φειδωλος χρημάτων = niggard of money,
ἐπιτυχῆς τῶν καιρῶν = suiting the times.

c. Adjectives denoting *local* relations fluctuate
between the genitive and dative:

ἀντίστροφος	= corresponding	takes either,
ἀντίος	= opposite	prefers genitive,
ἐναντίος	= opposite (place)	prefers dative,
	= contrary (quality)	prefers genitive,
παραπλήσιος	= near	prefers dative.

d. Adjectives denoting *mental states* or *activities*, as
mindfulness, skill, guilt and the like, including verbals
in -ικός (§. 21. Obs. 2. a.), the genitive here being that
form of the *causal* genitive called the genitive of *concern*
(§. 13. Obs. 3. d.), as

ἐπιστήμων τῆς θαλάσσης = acquainted with the sea,
παρασκευαστικός τῶν εἰς τὸν πόλεμον =
capable of providing the necessities of war.

e. *Comparatives*, including all adjectives denoting
difference in any respect, or *equality in value*, also *multiples* and *proportionals* (§. 21. Obs. 1. c.), as

νέοις τὸ σιγᾶν κρείττον ἔστι τοῦ λαλεῖν =
for the young silence is better than talking.

τῶν πάλαι σοφώτατος ὁ Σωκράτης =
Socrates was the wisest of the ancients.

ἐγκρατῆς ἥδονῶν = superior to pleasures,
περιπτὰ τῶν ἀρκούντων = more than enough,
ἄξιος ἐπαίνου = worthy of praise,
διπλασίοις αὐτῶν μάχονται =
they fight with double their own number.

Obs. 1. Genitive after Comparatives how resolved. Whenever difference is implied, the genitive can be resolved by the conjunction η = *quam* (§. 48. Obs. 4. e.), as

$\tilde{\alpha}\tilde{n}\tilde{d}\tilde{r}\tilde{o}\tilde{a}\tilde{s}\ \tilde{\alpha}\tilde{m}\tilde{e}\tilde{l}\tilde{v}\tilde{o}\tilde{n}\tilde{a}\tilde{s}\ \eta\ \tilde{\Sigma}\tilde{k}\tilde{u}\tilde{\theta}\tilde{a}\tilde{s}$ = better men than the Scythians,
 $\tau\tilde{o}\tilde{u}\tilde{n}\tilde{a}\tilde{n}\tilde{t}\tilde{i}\tilde{o}\tilde{v}\ \eta\ \tau\tilde{a}\ \pi\tilde{q}\tilde{o}\tilde{s}\tilde{d}\tilde{o}\tilde{k}\tilde{o}\tilde{n}\tilde{u}\tilde{m}\tilde{e}\tilde{n}\tilde{a}$ =
 the contrary of what was expected,
 $\pi\tilde{l}\tilde{e}\tilde{i}\tilde{s}\tilde{t}\tilde{a}\ \eta\ \tilde{\alpha}\tilde{l}\tilde{l}\tilde{h}\ \pi\tilde{a}\tilde{s}\tilde{a}\ \chi\tilde{w}\tilde{r}\tilde{a}$ = more than any other country,
 $\delta\tilde{i}\tilde{p}\tilde{l}\tilde{h}\tilde{s}\tilde{i}\tilde{a}\ \nu\tilde{e}\tilde{m}\tilde{o}\tilde{n}\tilde{t}\tilde{a}\tilde{i}\ \alpha\tilde{u}\tilde{t}\tilde{w}\ \eta\ \tau\tilde{o}\tilde{i}\tilde{s}\ \tilde{\alpha}\tilde{l}\tilde{l}\tilde{o}\tilde{i}\tilde{s}$ =
 his share is double that of the others.

The resolution of the genitive by $\pi\alpha\rho\alpha$ with the accusative, which is the dominant formula of comparison in Modern Greek, is also found in classic Greek, as (Thuc. I. 23.)

$\eta\tilde{l}\tilde{l}\tilde{o}\tilde{v}\ \tilde{\epsilon}\tilde{k}\tilde{l}\tilde{e}\tilde{i}\tilde{p}\tilde{e}\tilde{i}\tilde{s}\ \pi\tilde{v}\tilde{n}\tilde{v}\tilde{o}\tilde{t}\tilde{\epsilon}\tilde{r}\tilde{a}\tilde{i}\ \pi\tilde{\alpha}\tilde{r}\tilde{\alpha}\tilde{v}\ \tau\tilde{a}\ \tilde{\epsilon}\tilde{n}\ \tau\tilde{o}\tilde{v}\ \pi\tilde{q}\tilde{i}\tilde{n}\ \chi\tilde{r}\tilde{o}\tilde{n}\tilde{o}\tilde{v}$
 $\mu\tilde{n}\tilde{\eta}\tilde{m}\tilde{o}\tilde{n}\tilde{e}\tilde{v}\tilde{o}\tilde{m}\tilde{e}\tilde{v}\tilde{a}$ = eclipses of the sun are *more frequent than has been handed down from antiquity*.

Obs. 2. Illogical Expressions. *a.* The name *comparatio compendiaria* has been given to such expressions as (Il. XXI. 191.)

$\eta\tilde{q}\tilde{e}\tilde{i}\tilde{s}\tilde{s}\tilde{a}\tilde{v}\ \tilde{\delta}\tilde{'}\ \alpha\tilde{u}\tilde{t}\tilde{e}\ \Delta\tilde{i}\tilde{o}\tilde{s}\ \gamma\tilde{e}\tilde{n}\tilde{e}\tilde{h}\ \pi\tilde{o}\tilde{t}\tilde{a}\tilde{m}\tilde{o}\tilde{i}\tilde{o}\ \tau\tilde{e}\tilde{t}\tilde{u}\tilde{n}\tilde{t}\tilde{a}\tilde{i}$ =

Jove's race has been made stronger than the river, where however the comparison is not meant to be between Jove's race and the river, but between the race of *Zeus* and the race of *ποταμός*. The illogicality of the expression would be avoided by translating 'stronger than the river's'.

b. Neither are the following very convenient expressions exact in form:

$\lambda\tilde{o}\tilde{y}\tilde{o}\tilde{v}\ \mu\tilde{e}\tilde{l}\tilde{z}\tilde{a}\tilde{v}$ = too big for words,

$\tilde{\epsilon}\tilde{l}\tilde{p}\tilde{i}\tilde{d}\tilde{a}\tilde{v}\ \eta\tilde{q}\tilde{e}\tilde{i}\tilde{s}\tilde{s}\tilde{a}\tilde{v}$ = too good to be hoped for,

where the genitive is equivalent to the infinitive with η $\tilde{w}\tilde{s}\tilde{t}\tilde{e}$ (§. 86. c.), or to the potential with $\tilde{w}\tilde{s}$, as

$\tilde{\epsilon}\tilde{s}\tilde{t}\tilde{i}\ \gamma\tilde{a}\tilde{r}\ \mu\tilde{e}\tilde{l}\tilde{z}\tilde{a}\tilde{v}\ \tau\tilde{a}\tilde{n}\tilde{e}\tilde{i}\tilde{n}\tilde{a}\tilde{v}\ \tilde{\epsilon}\tilde{r}\tilde{y}\tilde{a}\ \eta\ \tilde{w}\tilde{s}\ \tau\tilde{a}\ \lambda\tilde{o}\tilde{y}\tilde{a}\ \tau\tilde{i}\tilde{s}\ \tilde{\alpha}\tilde{n}\ \epsilon\tilde{i}\tilde{p}\tilde{o}\tilde{i}$ =
 their works are greater than that one could recount them.

When, as here, the genitive implies a clause, it is often resolved by η *κατά*, more rarely by η *πρός* (= *quam pro*) with the accusative, and sometimes by η *ἐπί* with the dative, as

$\nu\tilde{e}\tilde{n}\tilde{q}\tilde{o}\tilde{s}\ \mu\tilde{e}\tilde{l}\tilde{z}\tilde{a}\tilde{v}\ \eta\ \kappa\tilde{a}\tilde{t}\tilde{'}\ \tilde{\alpha}\tilde{n}\tilde{\theta}\tilde{r}\tilde{o}\tilde{w}\tilde{p}\tilde{o}\tilde{v}$ =

a corpse too big for a man's.

Sometimes an infinitive is added, as (Eur. Med. 675.)

$\sigma\tilde{o}\tilde{f}\tilde{w}\tilde{t}\tilde{e}\tilde{r}\tilde{p}\ \eta\ \kappa\tilde{a}\tilde{t}\tilde{'}\ \tilde{\alpha}\tilde{n}\tilde{d}\tilde{r}\tilde{a}\ \sigma\tilde{u}\tilde{m}\tilde{b}\tilde{a}\tilde{l}\tilde{e}\tilde{i}\tilde{n}\ \tilde{\epsilon}\tilde{p}\tilde{h}\tilde{a}$ =

sayings requiring more wisdom to understand them than is human.

§. 70. Adjectives governing the Dative. Besides the dative in its general aspect as circumstantial (§. 15.), there are found with adjectives the following kinds of dative, the local, the *datus ethicus* including the *datus commodi et incommodi*, and the instrumental. Accord-

ingly, the adjectives governing the dative are those denoting *proximity*, *likeness*, *advantage*, and their contraries, and verbals having a passive sense, chiefly verbals in *-τέος*, after which the instrumental dative is translated as the dative of the agent (§. 15. c.)

ὅμοροι τοῖς Ἀρμενίοις = bordering with the Armenians,
οἱ πονηροὶ ἀλλήλοις ὅμοιοι =
 the wicked are like one another.

εὔνους Ἀθηναίοις = favourable to the Athenians,
ποθεινὸς φίλοις = regretted by friends,
ἀφελητέα μοι Ἑλλάς = Greece must be aided by me.

Obs. 1. **Variations.** a. Many adjectives denoting juxtaposition and likeness, compounds with *σύν* or *όμοῦ*, also *ἴσος* and *κοινός* are sometimes found with the genitive (§. 69. c.).

b. When contraries, i. e. adjectives denoting the contrary of *proximity* &c. imply separation, as many of those compounded with a privative* do, they prefer the genitive, as

αμιγεῖς βαρβάρων = unmixed with barbarians.

c. Adjectives governing the genitive are also construed with the dative when the notion of advantage or disadvantage is prominent in them, as

ἡ Θάσος τότε Λακεδαιμονίοις μὲν οἰκεία, ἡμῖν δ' ἀλλοτρία
ἡν = Thasus was then friendly to the Lacedaemonians, hostile to us.

d. The genitive sometimes found after adjectives of advantage or disadvantage is to be explained by the transition of the adjective into a substantive, as (Herod. II. 74.),

ἴροι ὄφεις ἀνθρώπων οὐδαμῶς δηλήμονες =
 sacred serpents not at all harmers of men.

e. The instrumental dative is found with adjectives of plenty, as, *δασὺς (δένδρων) δένδροις* = thick with trees.

f. The dative of advantage or disadvantage is often resolved into *πρὸς* or *εἰς* with the accusative, as

χρήσιμος πρὸς πόλεμον = useful for war,
χρήσιμος εἰς τὸ λέγειν = useful for discourse,

* The privative *α* (ἀνεν), as in *ἀπόλεμος* = 'unwarlike', must be distinguished from the collective (*ἄμα*), as in *ἄπας*, *ἀδελφός* from the intensive (*ἄγαν*), as in *ἄχανῆς* = 'gaping wide' as well as 'not gaping at all', *ἄξυλος* = 'thickly wooded' as well as 'treeless'; and from the merely euphonic, as *στάχνης* or *ἄσταχνης* = 'an ear of corn', *σπαίρω* or *ἄσπαίρω* = 'I breathe', like the English *Gad* and *Egad*.

βλαβερὸν πρὸς οὐσίαν = injurious to one's fortune.

These examples are from Plato; and they are classic steps in the transition of Greek from the synthetic to the analytic state.

Obs. 2. **Illogical Expressions.** When **ὅμοιος**, **ἴσος**, **παραπλήσιος**, **ὁ αὐτός** are used to denote that two entities have the same or a similar thing in common, there is the same illogicality in the use of the dative which has been pointed out in the *comparatio compendiaria* (§. 69. Obs. 2. a.), as

ὅμοιαν γνώμην σοὶ ἔχω = I have the same opinion with you, but literally 'I have an opinion like you' instead of 'like yours'. This illogicality is often avoided by leaving the adjective without regimen, and connecting the two entities by **καὶ**, as

ὅμοιαν γνώμην ἔχω καὶ σύ = I have the same opinion as you. With **ἴσος** and **ὁ αὐτός**, especially in Attic prose, **ὡς** and **ὡσπερ** are also found, which gives a formula exactly corresponding to our own: **τὸ αὐτὸ ὡσπερ** = 'the same as.'

§. 71. The Accusative with Adjectives. Any adjective may be accompanied by the *descriptive* accusative (§. 16. d.), as

καλὸς τὰ ὄμματα = beautiful-eyed,

δεινὸς μάχην = terrible in battle.

Contrary to the Latin idiom, the *quantitative* accusative (§. 16. b.) is not found with adjectives of dimension, nouns of dimension being used in Greek instead of adjectives:

a wall ten feet high =

τεῖχος δέκα ποδῶν τὸ ὑψος =

a wall of ten feet in height.

§. 72. Verbs governing the Genitive. The kinds of genitive found with verbs are the same as those found with adjectives (§. 69.); and the verbs governing the genitive correspond to the adjectives governing the same case. They are verbs denoting *participation* or *privation*, under which heading come those denoting *fulness* or *deficiency*,* *commencement* or *cessation*; verbs implying

* Here belong the phrases formed with **δέω** = 'I lack', as **πολλοῦ δέω ἀπολογεῖσθαι** = I am far from defending myself. **οὐλίγον δέω δακρύσαι** = I am almost in tears. **τριακοστὸν ἔτος ἐνὸς δέον** = the twenty-ninth year.

local connexion,* as in *holding by*, *aiming at*, *hitting* or *missing*; verbs denoting *mental states* or *activities*, and the *operation of the senses*; and verbs implying *comparison*, whether in the way of superiority or of inferiority, as

ἀμείνονος μοίρας μεταλαμβάνειν = to share a better fate,
φείδεο τῶν νηῶν = spare the ships.

γέμομεν ἐλπίδων = we are full of hopes.

μύθων ἥρχε πατὴρ ἀνδρῶν =
the patriarch of heroes began a speech.

οὐ λήξω θρήνων =

I shall not cease from lamentations.

στοχάζομαι τοῦ σκοποῦ = I aim at the mark.

τιμῆς τυγχάνειν = to obtain honour,

ἐπου μοι ἔχόμενος τῆς χλαμύδος =

follow me holding on by my cloak.

τῶν ὀνομάτων ἐπιλανθάνομαι = I forget the names.

τοῦ συμφέροντος ἐπιμελεῖσθαι =

to take care of one's interests,

σχολῆς ἀπολαύομεν = we enjoy leisure.

ἄπτεσθαι τῆς χειρός = to touch the hand,

διαφέρειν τῶν πολλῶν = to differ from the multitude,

πάντων κυριεύειν = to be master of all,

ὑστέρησε τῆς μάχης = he came too late for the battle.

Obs. **Variations.** *a.* Many verbs of participation are compounds with *μετά* and *σύν*, as *μετέχειν*, *συλλαμβάνειν*. The genitive after them is truly partitive; and accordingly, when *μέρος*, or any word implying *μέρος*, as *ἴσον* (*μέρος*), accompanies such verbs, it is put in the accusative (§. 74.), as (Thuc. VI. 40. 1.),
ἴσον . . . μετασχεῖν = to obtain an equal share.

Here *ἴσον* does not represent a whole, part of which is taken; but a part, which is wholly taken.

b. With verbs of fulness, particularly *βρύειν*, as with adjectives of like meaning (§. 70. Obs. 1. e.), the genitive is sometimes replaced by the instrumental dative, as

πλούτῳ κεκορημένος = sated with riches.

* Local connexion may be viewed under quite different aspects, as (Aristoph. Ach. 256.)

αὐξεται τῶν ἐμῶν χωρίων = grows on (lit. from) my lands.

c. Verbs of *holding by*, as *λαμβάνομαι* and its compounds with *ἐπί*, *άντι*, *σύν*, also *ἔχομαι* and *ἀντέχομαι*, must not be confounded with directly transitive verbs, signifying *to lay hold of*. These take an accusative of the object seized with a genitive of the part, as

λαβεῖν τινα ξώνης = to seize one by the girdle,
λύκον τῶν ὄτων κρατῶ = I hold a wolf by the ears.

Hence, many consider the genitive after the middles *λαμβάνομαι*, *δράττομαι* &c. to be partitive; and Matthiae (§. 331.) alleges that, whenever the *whole* of a thing grasped &c. is meant, the accusative and not the genitive is used.

d. Verbs of *aiming at*, *hitting* and *missing*, ought perhaps to be regarded syntactically as manifestations of desire; for when that idea is absent, they take a different construction. Thus, *τυγχάνω*, *ἀπαντῶ*, *ἔγγιγω*, when they mean simply to *meet with* or *approach to*, without any notion of desire or aim so to do, take, the first the accusative, and the last two the dative. The Latin language acknowledges the connexion between desire and its manifestations by forming words for both from the same root:

{ <i>havere</i> = to wish	{ <i>cupio</i> = I desire
{ <i>habere</i> = to have	{ <i>capiō</i> = I take.

The difference between shooting or throwing *at* a thing, and shooting or throwing a thing *itself*, is marked in Greek by a difference of construction. In the former sense, *τοξεύειν* and *βάλλειν* take the genitive; in the latter the accusative.

e. Verbs denoting mental states or activities, particularly verbs of *remembering* and *forgetting*, hesitate between the genitive and accusative, inclining rather to the accusative, where *things*, not persons, are remembered or forgotten. Mental affections have a twofold aspect. *Remembering*, for example, may be regarded as either voluntary or involuntary: in the former case it is an *act* logically requiring the accusative, and in the latter a mental *sensation* appropriately taking the genitive of that *whence* it arises. The double construction of the corresponding verbs in Latin points to the same distinction. The genitive after such verbs then is primarily the genitive of origin or cause, denoting the *whence* of the mental affection; but when men came to regard themselves rather as *acting* than as *acted on* in their mental affections, the accusative began to supplant the genitive. In some instances, this transition can be marked, as in *λανθάνομαι*, which is uniformly construed with the genitive, while its compound *ἐπιλανθάνομαι*, differing from it only in being more emphatic, is found with the accusative also. Witness also the varying frequency with which verbs of this class take the accusative: thus *ορέγεσθαι*, *ἐπιμαίεσθαι* are found with it sometimes; *ἐνθυμοῦμαι*, *στένω*, and *οἴ-*

χτείρω generally. Many verbs of this class, particularly verbs of *caring for*, take *περί*, and sometimes *ὑπέρ*, with the genitive.

f. Verbs of *seeing* almost uniformly take the accusative; and regarding verbs of *hearing*, it generally holds that they take the accusative of the sound heard, and the genitive of that which produces it. The reason of this is important. These verbs denote primarily *sensations*, not *acts* of the subject, and in this view naturally take the genitive of the object whence the sensation arises. But that which is in some circumstances chiefly a sensation is in others chiefly an act; and this latter aspect, which desiderates the accusative construction, gained ground in proportion as the Greek mind in general receded from the attitude of *receptivity*, and took up that of *activity* (§. 74. Obs.). Farther, the Greeks distinguished between the perception itself (*αἴσθημα*), and the object whence it proceeded (*τὸ αἴσθητόν*), the accusative being the proper case for the former, because it is always cognate with the verb (§. 74.), and the genitive for the latter. Now, in regard to *hearing*, this distinction is obvious, for the *sound* that comes from a bell cannot easily be confounded with the bell itself; but in *seeing*, the *image* of the bell, which alone is received into the mind, cannot be so easily distinguished from the bell itself whence the image comes. This latter distinction in short is scientific, not popular, and therefore of no account in the philosophy of language. Hence the almost uniform construction of verbs of *seeing* with the accusative, the popular mind regarding the thing seen, not as the source of a sensation, but as the object of an act; and hence also the prevailing usage with verbs of *hearing*, that they take the accusative of the sound heard, and the genitive of that which produces it, as

βοὴν ἀκούω — I hear a shouting.

ἀκούω σοὶ βοῶντος = I hear you shouting.

Sometimes however, the primitive construction prevails, as (Aristoph. Ach. 306.)

τῶν δ' ἐμῶν σπονδῶν ἀκούσατε = but listen to my truce;
which may be due to a comical personification of the *σπονδαῖ*.
The genitive with verbs of seeing is quite exceptional*, as

(Aristoph. Eq. 803.) *οὐδὲ Δῆμος . . . μὴ καθορᾶ σον* =
and lest Demus get sight of you.

* There is thus a beautiful parallel between verbs of *seeing* and *hearing* on the one hand, and verbs of *knowing* and *remembering*, which may be called intellectual seeing and hearing, on the other, in respect of construction. Like verbs of *seeing*, those of *knowing*, *ἐπιστασθαι*, *εἰδέναι*, *διανοεῖσθαι*, *γιγνωσκεῖν*, are found almost uniformly with the accusative; while

In regard to verbs of touching, tasting, and smelling*, the *αἰσθημα*, that which enters the mind by the sense, is easily distinguished from the *αἰσθητόν*, the object whence it proceeds; and accordingly, the genitive of the *αἰσθητόν* is most common with them, as (Herod. I. 80. 26.)

ώς ὅσφραντο τάχιστα τῶν καμήλων οἱ ἵπποι =
as soon as the horses scented the camels.

Pindar joins *θιγγάνω* and *ἀπτεσθαι* with the dative, perhaps on account of the juxtaposition with their objects which these verbs imply.

g. The genitive after verbs implying comparison denotes the standard of comparison, not the particular wherein the difference consists, or the measure of difference, which are put in the dative. The particular wherein the difference consists may also be in the accusative with or without *εἰς*, *κατά*, and when in the dative may take the prepositions *ἐν*, *ἐπι*. Verbs of *governing*, as *κρατεῖν*, *τυραννεῖν*, *δυναστεύειν*, belong to this class, because they imply superiority; but a dative is often found with them in poetry, especially with *ἀνάσσειν* in Homer, as (Il. XII. 242.).

ὅς πᾶσι θυητοῖσι καὶ ἀθανάτοισιν ἀνάσσει =
who rules over all mortals and immortals.

This dative may be local, as if 'who rules among' &c.

§. 73. **Verbs governing the Dative.** The kinds of dative found with verbs are the same as those found with adjectives (§. 70.); and the verbs governing the dative, like the adjectives governing the same case, denote *proximity*, *likeness*, *advantage*, or their contraries, to which add impersonals, as

ὅμοιον ὅμοιῷ αἰεὶ πελάζει	= like always draws to like.
ὅμοιογώ σοι	= I agree with you.
βοηθεῖτε τοῖς φίλοις	= assist your friends.
αὐτῷ προσήκει	= it becomes him.

The *dativus ethicus* (§. 15. Obs.) goes with any verb,

those of *remembering*, like those of *hearing*, hesitate between the genitive and accusative, with rather a predilection for the former.

* The verb *ὄξειν*, which is used not of the person smelling, but of the thing smelled, takes the genitive always, as

ὄξειν μύρον = to smell of perfume.

and is the kind of dative found with the substantive verb, and with impersonals, as

νῆες οὐκ εἰσὶν ἡμῖν = *in our case* there are no ships,
i. e. we have no ships.

πόθεν αἱ διαβολαὶ σοι αὔται γεγόνασιν; =

whence have these accusations arisen *in your case*?

i. e. whence have these accusations arisen against you?

ἴξεστι σοι εὐδαίμονι γενέσθαι =

in your case it is allowed to become happy,

i. e. you may become happy.

The instrumental dative (§. 15. c.) also goes with any verb, and is the kind of dative found with verbs denoting joy and sorrow, in which connexion it is often interpreted by *ἐπί*, as

ἄχθομαι τοῖς γεγενημένοις =

I am grieved at what has happened.

ἐπὶ τῇ τοῦ ἀδελφοῦ τύχῃ ἥδεται =

he is delighted with his brother's fortune.

The dative after *χρῶμαι* = 'I use' is probably instrumental, and due to the original meaning of the word: *χράω* = 'I answer', said of the god or oracle; *χράομαι* = 'I get an answer' by means of the god or oracle. So also *νομίζω* in a kindred sense takes the dative, as (Thuc. II. 38. 1.)

ἀγῶσι μέν γε καὶ θυσίαις διετησίοις νομίζοντες =

celebrating annual games and sacrifices,

where *νομίζοντες* = 'employing according to custom'.

Obs. Variations. *a.* Verbs denoting advantage or disadvantage strongly in the way of either *action* or *speech* take the accusative: such verbs are

<i>εὐ λέγω</i>	<i>εν ποιῶ</i>	<i>εὐεργετῶ</i>	<i>ἀδικῶ</i>
<i>κακῶς λέγω</i>	<i>κακῶς ποιῶ</i>	<i>κακουργῶ</i>	<i>βλάπτω</i> .

The verbs *ώφελῶ*, *ἐνοχλῶ*, *φιλοφρονοῦμαι*, *λυμαίνομαι* hesitate between the dative and the accusative.

b. Even of verbs denoting advantage or disadvantage in the way of *feeling* merely, some are sometimes found with the accusative: such are *ἀρέσκω* and *ἀπαρέσκω*. On the other hand,

ἀγαπῶ and στέργω, which usually have the syntax of directly transitive verbs, are found with the dative in the sense of 'being pleased or contented with', as

στέργειν τῇ ἔαντον τύχη =
to be pleased with one's own fortune.

c. When the root of a verb denoting advantage implies inferiority, as ὑπηρετῶ = 'I serve', but literally 'I am an under-rower' the comparative genitive may be used with that verb.

d. The dative of disadvantage with verbs of *fighting* is often interpreted in Homer by μετά, and in prose resolved by πρός or ἐπί with the accusative. Also, the dative of proximity with verbs of *following* is often interpreted by σύν, μετά, ἅμα.

e. When an impersonal verb is followed by an infinitival clause, the dative depending on the impersonal verb may become an accusative representing the subject of the infinitive, as

ἔξεστι σε εὐδαιμονα γενέσθαι = you may become happy, the infinitival clause being here the real subject to ᔁξεστι. This indeed is the usual construction of δεῖ and χρή. But many impersonal verbs are also used personally: such are δεῖ, δοκεῖ, and even μέλει, as (Il. X. 481.)

μελήσουσι δέ μοι ἐπποι = but horses shall be my care.
So δοκῶ = 'I think', as well as δοκεῖ μοι = 'me-thinks'.

f. Some verbs, like some adverbs, of proximity (§. 82. Obs. a.), are found with the genitive. Xenophon has

ἐπλησίαζον τῶν ἄκρων =
ils s'approchaient des sommets =
they were approaching the heights.

g. Some verbs governing the dative illustrate that transition from receptivity to activity already (§. 72. Obs. e. f.) noticed. Thus, λοιδοροῦμαι always takes the dative, but the later form (§. 31. Obs. 1.) λοιδορῶ generally the accusative.

h. Verbs of advantage are often found with the accusative and dative, the accusative being the descriptive (§. 16. d.), or that of the cognate substantive or equivalent notion, as

ὑπηρετήσω σοι τοῦτο = I shall do you this service.
βοηθεῖν τινι τὰ δίκαια = to assist one in what is fair.

§. 74. Verbs governing the Accusative. All *directly transitive* verbs take the accusative case; and any verb whatever may be followed by the accusative of the cognate substantive or equivalent notion, and by the descriptive accusative, as

τίς πατάσσει θύραν; = who knocks at the door? (direct object.)
 δέμω δόμον = I build a building. (cognate substantive.)
 δέμω ναόν = I build a temple. (equivalent notion.)
 ἀλγῶ τοὺς πόδας = I have a pain in my feet. (descriptive accus.)

The large class of accusatives denoting the *result* of the operation denoted by the verb are either of the cognate substantive, as in the second of the above examples, or of the equivalent notion, as in the third. After intransitive verbs, the accusative of the cognate substantive is generally accompanied by some specification, and that of the equivalent notion often expresses nothing but this specification, as

δεινὴν νόσον νοσεῖν } = to be dreadfully ill.
 δεινὰ νοσεῖν

Obs. Transitive Verbs. The rule which says that directly transitive verbs govern the accusative case would be of easy application, if verbs were constantly used in the same kind of signification, as intransitive, indirectly transitive, or directly transitive; or, in case of irregularity, if the details of the irregularity corresponded from language to language. But the reverse of all this is the case.

In all languages, many transitive verbs are also used intransitively, as *τρέπειν* = *vertere* = tourner = 'to turn'; and this is particularly common in English, because the English language has neither a middle voice, nor a convenient reflexive pronoun whereby to express the middle meaning. Compare

la terre se meut die Erde bewegt sich } = the earth moves.
 terra movetur η γῆ κινεῖται

On the other hand, intransitive verbs are often used transitively. The poets especially take great liberties in this way, as

χορεύω θεόν = I dance in honour of a god.
 τοὺς εὐσεβεῖς θεοὺς θυήσκοντας οὐ χαιρούσιν =
 the gods take no pleasure in the death of the pious.

Very often however the directly transitive construction is justified by the intransitive verb having acquired in a quite intelligible way a directly transitive meaning, as

{ θαρρῶ = I am bold (intrans.) = I fear not (trans.)
 { θαρρῶ θάνατον = I fear not death.
 { δορυφορῶ = I am spear-bearer (intrans.) = I escort (trans.)
 { δορυφορῶ τινα = I am or form part of some one's bodyguard.

{ *τίλλομαι* = I tear myself, say my hair (intrans.)
 { *τίλλομαι τινα* = I bewail some one. (trans.)
 { *σοφίζομαι* = I play the sophist (intrans.) = I cheat (trans.)
 { *σοφίζομαι τινα* = I cheat some one.

The most conspicuous example of divergence between Greek and English in the respect now under discussion is the intransitive use of *ἔχω* with adverbs, as

ἀθύμως ᔁχει = he is down-hearted.

οὕτως ᔁχει = such is the case.

ὡσπερ εἴχε = just as he was.

The Romans used *habere* as well as *se habere* in the same sense; and the French *il y a* yields, on analysis, another illustration in point.

The distinction among transitive verbs between the directly transitive and those indirectly so, is still more inconstant. Many Greek constructions which startle the English student appear quite natural to other moderns, the idiom of whose language happens to coincide with the Greek. Thus that *αἰσθάνομαι*, *μέμνημαι*, and *θανατάξω* should govern the genitive, appears quite natural to a Frenchman, because he himself says 's'apercevoir *de*', 'se souvenir *de*', 's'étonner *de* quelque chose'; and that *βοηθεῖν*, *ἀρέσκειν*, *πειθεσθαι*, *ἐπεσθαι* should govern the dative appears quite natural to a German, because he himself says 'einem helfen, gefallen, gehorchen, folgen.'

The prevalence of the indirect regimen in Greek, and of the direct in modern languages generally* arises from a difference of mental attitude, receptivity having been the mental attitude of the primitive Greek mind, whereas activity is that of the modern. In the isolation and leisure of patriarchal life, it was natural for man to regard himself chiefly as the subject of impressions, because he really was so; even a modern imagination may realise how small and weak these ancient shepherds must have felt themselves to be, in presence of heaven and earth, and of their majestic phenomena.

* The direct regimen is characteristic of English especially, witness the following common verbs which take a direct object in English, but in German the dative case as in Greek and Latin, and the dative preposition *à* in French.

obey	= <i>obéir</i>	= gehorchen,
order	= <i>ordonner</i>	= gebieten,
pardon	= <i>pardonner</i>	= verzeihen,
permit	= <i>permettre</i>	= erlauben,
please	= <i>plaire</i>	= gefallen,
resemble	= <i>ressembler</i>	= gleichen,
resist	= <i>résister</i>	= widerstehen.

But when, by association and accumulated experience, man came to recognise in himself the sovereign of the world, he gradually learned to regard himself less as the receiver of impressions than as the producer of effects; and this latter aspect has, in the busy modern world, almost entirely supplanted the other. Hence *hearing*, *remembering*, *desiring* &c. which were to the primitive Greek mind impressions passing from without inwards, are in our case acts proceeding from within outwards; there is no violence done to nature in either case, and, in both, the syntax of language has conformed to the *ἐνδιάθετος λόγος*. It is probable too that Christianity, which invigorated man's sense of responsibility, has contributed not a little to the substitution of the modern for the ancient mental attitude. The following examples exhibit the contrast between these mental attitudes:

(Soph. Phil. 646.) *ὅτον σε χρεία καὶ πόθος μάλιστ' ἔχει* — anything, need and desire of which possess thee particularly, i. e. whatever you particularly need and desire.

(Soph. Oed. Col. 1142.) *βάρος γὰρ ἡμᾶς οὐδὲν ἐκ τούτων ἔχει* — for no displeasure on this account possesses us, i. e. we have no displeasure on this account.

Anciently the feeling had the man, now the man has the feeling; and that because the attitude of the mind was *receptive* then, and is *active* now. Accordingly if, as in the case of adjectives (§. 69.*), the English verb, when apparently transitive, be put into a neuter form, the true Greek construction will often naturally appear, as 'I desire' — 'I am desirous of', 'I remember' — 'I come in mind of', 'I assist' — 'I am helpful to' &c.* A good Lexicon however is the only perfect guide to the construction of particular verbs; and the above views are useful, not as superseding the study of syntactical irregularities in detail, but as accounting for two facts which meet the student continually viz. that many verbs, directly transitive in English, are indirectly so in Greek, and that most of the Greek verbs generally construed with the genitive or dative, are also sometimes construed with the accusative. The difference of mental attitude accounts for the former, and the *gradual* transition from the attitude of receptivity to that of activity accounts for the

* Let the student make this experiment with *βασιλεύω*, *στρατηγῶ*, *ἄλλοτριοῦμαι*, *πληροῦμαι*, *γέμω*, *μετέχω*, *στέρομαι*, *ἐπιθυμῶ*, *ἐπιμελοῦμαι*, *ἀμειλῶ*, *φροντίζω*, *ολιγωρῶ*, *μέμνημαι*, *ἐπιλανθανομαι*, *φείδομαι*, *διαφέρω*, *καλλιστεύω*, which govern the genitive, and with *ταυτίζομαι*, *όμοιοῦμαι*, *ἴσοῦμαι*, *συμφωνῶ*, *όμογνωμονῶ*, *μίγγυνμαι*, *όμιλω*, *πλησιάζω*, *ἐννοῶ*, *βοηθῶ*, *συμμαχῶ*, *χρησιμεύω*, *ἐναντιοῦμαι*, *πείθομαι*, *ἀπειθῶ*, *πιστεύω*, *ἀρμοξει*, *πρέπει*, which govern the dative.

latter. Sometimes indeed a difference of signification will account for the difference of cases, as

But very often, verbs are employed in precisely the same sense with different cases.

An ingenious person might indeed account for diversity of construction, even when the sense remains the same, by alleging a diversity of aspect. He might say e. g. that *ἀρέσκειν τινὶ* means 'to be pleasing to some one' and that *ἀρέσκειν τινά* means 'to make some one pleased'. But such remarks would only be applications in detail of the general principle, that the direct replaces the indirect construction just as the mental attitude changes from receptivity to activity.

§. 75. Verbs governing the Accusative and Genitive.*

These are verbs of a) *filling* and *emptying*; b) *separating*, *excluding*, *hindering* or *making to cease*, *freeing* and *receiving*; c) *wondering at*, *congratulating*, *praising*, *blaming*, *accusing*, *prosecuting*, *condemning* and *acquitting*; d) *exchanging*, *buying*, *selling*, *valuing*, and *preferring*, the accusative being that of the object emptied, separated, praised, valued, &c. and the genitive the material of which that object is emptied, the whole from which it is separated, the cause on account of which it is praised, the price at which it is valued &c.

a. ζεύγη σίτου γεμίσαντες = { Material genitive
having filled waggons with corn} (§. 13.)

b. ἔγω σε παύσω τοῦ θράσους = { Local gen-
I shall make you cease your boldness} itive (§. 13.)

* No more than two cases are ever really dependent on a verb, because no more than two are ever necessary to complete its meaning; but additional cases may accompany the verb to express accessory circumstances, as

τὴν σοφίαν ἀργυρίου τῷ βουλομένῳ πωλεῖ Ἀθήνησιν = he sells wisdom for money to all comers at Athens.

c. ἐπαινεῖν τινα τῆς ἀρετῆς = } Causal genitive
to praise one for his virtue } (§. 13. Obs. 3.)
d. πλείστου τιμᾶν τι = } Comparative gen-
to value anything very highly } itive (§. 13. Obs. 4.)

Obs. Variations. a. The genitive of the person *from whom* an evil is *warded off* may be turned into the dative of the person benefited by the evil being warded off, and this is generally the case with *ἀρήγω*, and *ἀμύνω*. Thus *ἀμύνω τόνδε σοι* is more common than *ἀμύνω τόνδε σου*. The directly transitive notion of warding off an evil is often so far lost in the indirectly transitive one of assisting a person, that these two verbs are frequently found with a single regimen viz. the dative.

b. The genitive after verbs of *receiving* is generally interpreted by *παρά*, whether the thing received be a material substance or information.

c. Verbs of *wondering at* have a single regimen in two cases. When only the person wondered at is mentioned, and not also the cause, the person is usually put in the genitive, the cause being often added by a participle in concord, as

θαυμάζω σοῦ λέγοντος τοιαῦτα =

I wonder at you saying such things.

When however there is no question of a person, but only of a thing, and that without any specification of the particular quality or circumstance exciting the emotion, the thing is generally in the accusative, as (Xen. Cyr. IV. 2. 28.)

ἐθαύμαζον τὰ δρῶμενα = they wondered at the proceedings.

d. Verbs of *accusing* and *condemning*, when they are compounds of *κατά*, as *κατηγορῶ*, *καταγιγνώσκω*, *καταδικάζω*, *κατακρίνω*, *καταψηφίζομαι*, take the accusative of the crime or punishment, and the genitive of the person accused &c., as

καταγιγνώσκειν φυγήν τινος = to condemn one to exile.

e. The verb *μέμφομαι* is a signal instance of variation. Its syntax may be thus represented according to Liddell and Scott:

Double Regimen	Single Regimen
acc. <i>rei</i> gen. pers.	acc. pers.
acc. <i>rei</i> dat. pers.	dat. pers.
gen. <i>rei</i> dat. pers.	gen. <i>rei</i> .

f. The comparative genitive is often interpreted by *ἀντί* with verbs of *exchanging*, and also with verbs of *requiting* and *avenging* which, as involving the notion of a *quid pro quo*, come under the same heading. After verbs of *exchanging*, the genitive is often replaced by the accusative with *πρός*. Verbs of *wagering* belong here too, and take the genitive of the stakes, as

περιδόσθαι τῆς κεφαλῆς = to wager one's head.

§. 76. Verbs governing the Accusative and Dative. These all involve more or less distinctly the idea of transmission, and take the accusative of the thing transmitted, and the dative of that to which it is transmitted. Such are verbs of *giving*, *bringing*, *declaring*, *promising*, *enjoining*; of *adapting*, *opposing*, and *comparing* or *likening* one thing to another; and of *mixing* one thing with another: as

δῶρα τῷ θεῷ φέρειν = to bring gifts to the gods,
 σοὶ ἐπιτάττω δὲ τι ἀν δοκῶ ἀγαθὸν εἶναι =
 I enjoin upon you whatever I think excellent.
 προσαρμόζειν ἔκαστον ἔκάστῳ = to adapt each to each,
 ἵσους ἵσοισι πολεμίοις ἀντιτίθεις =
 opposing equals to equals as enemies,
 ἐμὲ θεῷ οὐκ εἶκασεν = he did not liken me to a god.
 κόπρον τῇ γῇ μιγνύναι = to mix dung with the land.

Obs. Variations. *a.* Both *κελεύω σοι τοῦτο ποιῆσαι* and *κελεύω σε τοῦτο ποιῆσαι* are found. The former is Homeric; the latter, Attic.

b. Like *circundo* and *dono* in Latin, *περιβάλλομαι* and *δωρέομαι* have a double construction, as

{ <i>περιβάλλομαι τεῖχος τῇ πόλει</i> , or <i>περιβάλλομαι τὴν πόλιν τείχει</i> ,	or <i>circumdo murum urbi</i> , or <i>circumdo urbem muro</i> ,
{ <i>δωρεῖσθαι τόξον ἔκάστῳ</i> , or <i>δωρεῖσθαι ἔκαστον τόξῳ</i> ,	or <i>donare arcum cuique</i> , or <i>donare quemque arcu</i> ,

§. 77. Verbs governing Two Accusatives. Verbs of *asking*, *teaching*, *reminding*, *persuading*, *concealing*, *clothing* and *stripping* take two accusatives, one of the person, and another of the thing; as

αἰτήσας νέας ἑβδομήκοντα τοὺς Ἀθηναίους =
 having asked the Athenians for seventy ships,
 τίς σε ἐδίδαξε τὴν στρατηγίαν; =
 who taught you generalship?
 ἀναμνήσω ὑμᾶς καὶ τοὺς τῶν προγόνων κινδύνους =
 I shall remind you also of our ancestors' dangers,

ἔπειθε τοῦτο τοὺς Φωκαῖούς =

he persuaded the Phocæans of this.

μὴ κρύψῃς τὴν θυγατέρα τὸν θάνατον τοῦ ἀνδρός =

don't conceal from your daughter *her husband's* death.

τὴν ἐσθῆτα ἀπέδυσαν αὐτόν =

they stripped him of his garment.

Directly transitive verbs of *speaking or doing good or ill* (§. 73. Obs. a.) are found with two accusatives, one of them being that of the cognate substantive or equivalent notion, as

πᾶς τις τὸ γυναικεῖον φῦλον κακὰ πόλλα ἀγορεύει =

every one says much ill of the female sex.

And any directly transitive verb may have two accusatives by means of the *σχῆμα καθ'* ὅλον καὶ μέρος, as

(Π. XI. 250.) κρατερὸν δά πένθος ὀφθαλμοὺς ἐκάλυψε = a mighty sorrow clouded his eyes.

The double accusative after verbs of *dividing* is really a case of apposition, as (Xen. Cyr. VII. 5. 13.)

ὁ Κῦρος τὸ στράτευμα κατένειψε δώδεκα μέρη =

Cyrus divided his army into twelve parts.

Obs. *Variations.* a. These are most numerous among verbs of *asking*, under which head come verbs of *praying*. As containing the notions both of entreaty and of need, *δέομαι* is found with a double genitive, as (Herod. I. 59. 23.)

ἔδεετο τοῦ δῆμον φυλακῆς τινος =

he requested of the people some guard.

With this exception, the thing asked for is put in the accusative; but the person of whom it is asked is often in the genitive with *παρά*. In the case of a prayer or vow, the sanctioning powers* are always in the genitive, as (Herod. VI. 68. 10.)

ἔγὼ ὦν σὲ μετέρχομαι τῶν θεῶν =

I beseech you then by the gods:

and this genitive is sometimes interpreted by *πρός*, ἀντί = 'in presence of', also by *ὑπέρ* = 'for the sake of'. Similarly, this last

* In the case of a declaration, as by a verb of swearing or by *αἰσχύνομαι*, the sanctioning powers are in the accusative case, as

(Xen. An. II. 3. 22.) αἰσχύνομαι θεοὺς Κῦρον προδοῦναι =
I am ashamed in presence of the gods to betray Cyrus.

preposition interprets the genitive of him in whose honour a libation is poured out, or a toast drunk, as

(Aristoph. Ach. 985.) *επεῖσσον ἀγαθοῦ δαίμονος* =

pour out a drink-offering to the good Genius.

(Theocr. XIV. 18.) *ἔδοξ' ἐπιχεῖσθαι ἀκρατον ὄτινος ηθελ'*
ἔκαστος = it pleased them to pour out unmixed wine to whomsoever each wished.

b. Verbs of *taking away*, which come under the head of *stripping*, are by no means constant to the rule. Thus *ἀφαιρέω* takes two accusatives only in the middle voice; whereas in both active and middle it is found with the accusative and genitive, and also with the accusative and dative.

§. 78. Verbs governing the Genitive and Dative.

These are chiefly (a) *impersonals* implying *concern* or *need*, (b) verbs of *participation* personal and impersonal, (c) *transmissive* verbs with a *partitive* genitive, (d) certain *legal* phrases implying *contention*, (e) and verbs of *praising*, *blaming*, and *grudging* in poetry, as

(a) *μεταμέλει μοι ἀνοίας* = I repent of my folly,

προσήκει μοι τῆς ἀρχῆς =

I have to do with the government,

δεῖ μοι χρημάτων = I have need of money.

(b) *μέτεστι μοι τῆς λείας* = I have a share of the booty,
συναίρομαι τινι τοῦ κινδύνου =

I share the danger with some one.

(c) *μεταδίδωμι τῷ βούλομένῳ τοῦ ἐν τῇ ἐμῇ ψυχῇ πλούτουν* = I impart to whoever will of my soul's wealth.

(d) *ἀντιποιοῦμαι τῆς ἀρχῆς τινι* =

I contend with some one for the supremacy,

δικάζομαι τινι κλήρου =

I go to law with some one about an inheritance,

ἐπέξειμι τινι φόνου = I accuse some one of murder.

(e) *πατρὶ μηνίσας φόνου* =

being angry with his father because of the murder.

φθονέω τινὶ τινος =

I bear some one ill will on some account.

§. 79. Passive Verbs. a. The object of a verb in the active voice becomes its subject in the passive; and this

holds in Greek of the indirect object as well as of the direct, i. e. of the genitive and dative as well as of the accusative, as (Pl. Rep. VIII. 551. A.)

ἀσκεῖται δὴ τὸ ἀεὶ τιμώμενον, ἀμελεῖται δὲ τὸ ἀτιμαζόμενον = doubtless what is uniformly honoured is cultivated; and what is dishonoured, neglected.

(Thuc. IV. 61. 1.) *οἱ ἔνοικοι ξύμπαντες μὲν ἐπιβούλευομεθα* = all we, the inhabitants (of Sicily), are being plotted against.

The subjects of *ἀσκεῖται*, *ἀμελεῖται*, *ἐπιβούλευομεθα* here represent the accusative, the genitive, and the dative which these verbs respectively govern in the active voice.

b. When a verb has two objects in the active voice, one or other becomes the subject in the passive voice according to the following principles. 1. The direct object is preferred to the indirect i. e. the accusative is preferred to the genitive and dative. 2. The personal object is preferred to that of the thing. These two principles modify one another; but the normal results of their joint operation are that, in the case of verbs governing the accusative and genitive in the active voice, the accusative becomes the subject in the passive; in the case of verbs governing the accusative and dative in the active voice, either may, but the dative of the person does more elegantly, become the subject in the passive; and in the case of verbs governing two accusatives in the active voice, the personal accusative becomes the subject in the passive, as

κατηγορεῖται τινος μηδίζειν =

a charge of Medizing is brought against one.

οἱ τῶν Ἀθηναίων ἐπιτετραμμένοι τὴν φυλακήν =

those of the Athenians entrusted with the watch.

ὁ ἀνὴρ ὑπὸ Λάμπρου μουσικὴν ἐπαιδεύθη =

the man was taught music by Lampros.

Deviations from the above normal results still illustrate the principles on which they depend. Thus *οἱ κατηγορούμενοι* is found as well as *τὰ κατηγορούμενα*, the per-

sonal object, though in the genitive, being preferred in the former to that of the thing; and the direct object being preferred in the latter to the indirect.

c. The subject of a verb in the active voice becomes the agent with the passive, and is expressed by the genitive alone in poetry, particularly in Epic poetry; but in prose, this genitive is interpreted by prepositions, particularly by *ὑπό* (§. 13. Obs. 3. c.). The agent is also put in the dative, especially after the perfect and pluperfect tenses (§. 15. c.).

d. Any passive verb may be followed by the dative of the instrument, and by the descriptive accusative, as

(Herod. VI. 38.) *πληγέντα τὴν κεφαλὴν πελέκει* =
struck with an axe on the head.

§. 80. **Verbals in -τέος.** a. When these are formed from directly transitive verbs, i. e. from verbs governing the accusative, they may be used personally or impersonally: when used personally, they agree with their subject in gender, number, and case; when used impersonally, they stand in the neuter, and what was their subject in the personal construction becomes their direct object, as

ἡ ἀρετὴ ἀσκητέα ἐστίν
ἀσκητέον ἐστὶ τὴν ἀρετῆν } = virtue must be practised.

b. When derived from other than directly transitive verbs, verbals in -τέος are always used impersonally, and govern the cases proper to the verbs from which they are severally derived, as

ἐπιμελητέον τῶν βοσκημάτων =

the cattle must be cared for,

ἐπιχειρητέον τῶν ἔργων = the work must be undertaken.

c. When derived from verbs which assume a new meaning in the middle voice, and with it a new construction, verbals in -τέος take both meanings, and in each meaning the construction corresponding to it, as

πειστέον ἔστιν αὐτόν = he must be persuaded,
πειστέον ἔστιν αὐτῷ = he must be obeyed:
 because 'I persuade one' = *πείθω τινα*, and 'I obey one' = *πείθουμαι τινι*.

Obs. **Accusative of the Agent.** Usually, the agent after verbals in *-τέος* is put in the dative (§. 70.); but in Attic it is sometimes expressed by the accusative, which is anomalous indeed with respect to grammatical form, but in perfect correspondence to the thought, the force of the verbal being that of *δεῖ* with the accusative and following infinitive, as

(Plat. Gorg. p. 507. D.) *τὸν βουλόμενον . . . εὐδαιμονα εἶναι σωφροσύνην διωκτέον καὶ ἀσκητέον* i. e. *δεῖ διώκειν καὶ ἀσκεῖν* = whoever would be happy must seek after and cultivate moderation.

§. 81. **Dependent Infinitive.** a. In Homer, the infinitive stands as a descriptive accusative after all sorts of adjectives, as

θείειν ἀνέμοισιν ὅμοιοι = like the winds for running. But in prose, this construction is usual only with adjectives denoting worthiness or fitness, and their contraries, as

Θεμιστοκλῆς ἵκανώτατος ἦν εἰπεῖν καὶ γνῶναι καὶ πράξαι = Themistocles was in the highest degree capable of speech, resolution, and action.

b. After verbs, the infinitive is as common, and, in its force, as varied in Greek as in English. In particular it often denotes purpose, as

(Soph. Oed. Col. 12.) *μανθάνειν ἦκομεν ξένοι πρὸς ἀστῶν* = we strangers are come to learn of (you) citizens.

c. In the above examples, the subject of the infinitive is also the subject of the clause on which it depends; but that need not be, as

ὅ τε χρόνος βραχὺς ἀξίως διηγήσασθαι =
 and the time is short for (one) worthily to recount.
τὴν πόλιν φυλάττειν αὐτοῖς παρεδώκαμεν =
 we gave up to them the city (for them) to guard.

Hence the Greek infinitive active may often be translated by the English infinitive passive, as

καλὸς δρᾶν = fair to see, or to be seen.

θαυμάσιον εἰπεῖν = wonderful to tell, or to be told.

παρέχειν ἑαυτὸν ὥσπερ τέμνειν καὶ καίειν λατρῷ = to give one's self up to a physician (for him) to hack and cauterise, or to give one's self up to be hacked and cauterised by a physician.

In the English of these examples, the subject of the infinitive active is not, whereas the subject of the infinitive passive is the same as that of the verb or adjective on which the infinitive depends.

Hence also it is often indifferent whether the active or the passive infinitive be used in Greek. Thucydides (I. 138. 3.) uses *ἄξιος* with the infinitive active in the very same sense in which he uses it with the infinitive passive (II. 40. 1.)

τὴν πόλιν ἀξίαν εἶναι θαυμάζεσθαι =
that the city is worthy to be admired.

After adjectives however, the infinitive active is more common than the infinitive passive.*

§. 82. Government of Adverbs. *a.* Adverbs derived from adjectives govern the case required by these adjectives, as

βουλεύεσθε ἀξίως τῆς πόλεως =
devise counsels worthy of the state.
δμολογούμενως τῇ φύσει ζῆν =
to live agreeably to nature.

b. The adverbs of adjuration, *νή* or *ναί*, used only in affirmative sentences, with or without *μά* to strengthen

* The Greek use of the infinitive in dependence on an adjective was imitated by the Roman poets: witness the *niveus videri*, and *impiger hostium turmas vexare* of Horace.

them; and *μά* itself, used without *ναι* when the adjuration is negative, take the accusative, as

μά τὸν Δία, οὐκ ἔρετο — No by Jove, I shall not tell.

c. All others, except *ἄμα*, *ἔξῆς*, *ἔφεξῆς*, which uniformly take the dative, govern the genitive: most of them denote *place*, *time*, or *repetition*, as

ποῦ γῆς; — *ubi terrarum?* — where in the world?

μέχρις οὗ, *ἄχρις οὗ*, *ἕως οὗ* — as far as, until,

πολλάκις τῆς ἡμέρας — many times a day,

λάθρᾳ τῆς πόλεως — unknown to the state.

d. This also is the construction of the idiomatic phrases formed by adverbs with *ἔχω* (§. 74. Obs.), *ῆκω*, and *κεῖμαι*, as

οὐκ οἶδα παιδείας ὅπως ἔχει καὶ δικαιοσύνης — I don't know how he is in respect of culture and uprightness.

ὡς ποδῶν εἶχον — as fast as they could run.

εὖ ἦκειν χρημάτων — to be well off for money.

ἡ Κέρκυρα τῆς Ἰταλίας καὶ Σικελίας καλῶς παράπλου κεῖται — in regard to Italy and Sicily, Corcyra lies well for a coasting voyage.

Obs. Variations. a) The following are sometimes found with the dative, *ἄγχι*, *ἔγγύς*, *σχεδόν*, *όμον*, *ἄλις*, as

ἔγγύς τῆς πόλεως or *ἔγγύς τῇ πόλει* — near the city.*

b) *Χάριν* and *κύκλῳ* (§. 51.) hesitate between the substantival and the prepositional constructions, as

ἔμήν χάριν or *ἔμον χάριν* — for my sake,

κύκλῳ δένδρον or *κύκλῳ δένδρον* — around a tree.

* In English we say 'far from' but 'near to', because, in regarding distance as remote, our language contemplates a traveller going *from* a place, whereas, in regarding distance as near, it contemplates a traveller going *towards* a place. In Greek, the construction proper to the relation *from* may be preserved in both cases, as it always is in French, where 'near to' = 'près de', and 'far from' = 'loin de'. The Italians use every

idiom possible with *presso*, 'presso $\left\{ \begin{matrix} \text{della} \\ \text{alla} \\ \text{la} \end{matrix} \right\}$ torre' all meaning simply 'near the tower'.

In these instances, and in *δέμας* (poet.), *νόμον* (Plat.), *δίκην*, as in the Latin *instar*, which represents the meaning of the three words last mentioned, the noun is seen passing into the preposition, just as the English participle in *concerning*, *regarding*, *touching*, is seen passing into the same part of speech.

c) With *ἐνεκα*, the genitive is sometimes not causal, but that of concern, as

ἐνεκα τῶν ἐτέρων ἀστρων =

so far as the other heavenly bodies are concerned.

d) *Πλήν* as an improper preposition (§. 51.) takes the genitive; as a conjunction, it couples like cases, as

οὐκ ἔστιν ἄλλος πλήν ἐγώ = it is no other than myself.

§. 83. Government of Prepositions. a. Prepositions, and even the same preposition in different meanings, govern different cases because of a correspondence between the relations expressed by the prepositions and by the case endings respectively. In their original local force (§. 51.), prepositions take the genitive, dative, or accusative, according as they denote the relation of *whence*, *where*, or *whither* (§. 11. a.). But when the relations of place are transferred to time and causality (§. 11. b.), the syntax of prepositions expressing these relations becomes difficult, yet not more difficult in Greek than in English.*

* Take for instance *by* and *with*, both of which start from the same local idea viz. proximity, under the aspect of mere juxtaposition in the former, under that of consociation in the latter; it is very instructive to notice where they coincide, and where they differ in their derived applications, as follows:

By = near	as I have a cask of wine <i>by</i> me.
= along	„ I shall walk <i>by</i> the riverside.
= on	„ battles <i>by</i> sea and land,
= before	„ <i>by</i> this time the sun had risen.
= during	„ <i>by</i> the space of forty years,
= according to	„ <i>by</i> his own account he acted nobly.

Farther, *by* denotes

the agent,	„ the Iliad was written <i>by</i> Homer.
the instrument,	„ the cities were destroyed <i>by</i> fire.
the manner,	„ he entered <i>by</i> force.
distribution,	„ day <i>by</i> day, to sell <i>by</i> the pound,
adjuration,	„ No! <i>by</i> Heaven!

b. In a series of substantives, the preposition may be either repeated before every one, or prefixed only to the first: in poetry, however, it is sometimes omitted before the first, and placed before the second, as

(Eur. Hec. 146.) *ἄλλ' ἵθι ναοὺς, ἵθι πρὸς βωμούς* =
but go to the temples, go to the altars.

c. In Attic, especially in prose, the preposition before the antecedent is seldom repeated before the relative, as

(Xen. Symp. IV. 1.) *ἐν τῷ χρόνῳ φῶντι ἀκούω* =
. in the time during which I hear you.

d. The eighteen Greek prepositions classified according to the cases they govern are

Governing the Gen. *ἀπό*, *ἐκ* or *ἐξ*, *ἀντί*, *πρό*.

„	„	Dat. <i>ἐν</i> , <i>σύν</i> .
„	„	Acc. <i>εἰς</i> .
„	„	Dat. and Acc. <i>ἀνά</i> .
„	„	Gen. and Acc. <i>διά</i> , <i>κατά</i> , <i>ὑπέρ</i> .
„	„	Gen., Dat. and Acc. <i>ἀμφί</i> , <i>περί</i> , <i>ἐπί</i> , <i>μετά</i> , <i>παρά</i> , <i>πρός</i> , <i>ὑπό</i> .

Obs. 1. *Ἀπό* and *ἐκ* or *ἐξ*.* These are thus distinguished,
ἀπό = from the surface or edge of a thing,
ἐξ = from the interior, i. e. out of.

With denotes

along with,	„ I walked <i>with</i> him a mile.
among,	„ <i>with</i> the ancients, suicide was not a crime.
immediately after,	„ <i>with</i> this, he pointed to the stars.
on the side of,	„ Fear not, I am <i>with</i> thee.
in opposition to,	„ the Allies fought <i>with</i> the Russians.
the instrument,	„ to write <i>with</i> pen and ink,
the manner,	„ he acts <i>with</i> precipitation.

By resorting to nice distinctions, a still greater variety of meanings might be educed; but the above are unquestionable. Let them be compared with those of *παρά* and *μετά*, which, in respect to the local starting-point, are the Greek correspondents of 'by' and 'with' respectively.

* Latin *ab* and *ex*. The form *abs* is represented by the Homeric *ἄψ* = 'back'.

Hence, in respect of time, *ἐκ* denotes more immediate sequence, as
ἀπὸ δείπνου = after supper,
ἐκ δείπνου = immediately after supper.

The *from* of connexion as well as that of separation (§. 12.) can be expressed by both, as

οἱ ἀπὸ Πλάτωνος = Plato's disciples,
οἱ ἀπὸ τῶν παταστρωμάτων τοῖς ἀκοντίοις ἔχρωντο =
 those who were on the decks used javelins.
οἱ ἐκ τῶν γῆσαν πακοῦργοι = the island robbers,
οἱ ἐκ τῆς ἀγορᾶς ἀπέφυγοι =
 those who were in the forum fled.

In the last example, many would call the use of *ἐκ* *proleptic*, i. e. due to the force of the following verb mentally anticipated.

Both *ἀπό* and *ἐξ* express *position away from*, but the latter in early writers chiefly, as

ἀπὸ θαλάσσης οἰκεῖν = to live far from the sea,
ἐκ βελέων = out of shot.

In the following example, motion *from* is with perfect accuracy expressed by the Greek, though not by the corresponding English phrase,

ἀφ' ἵππων μάχεσθαι = to fight on horseback.

In the case of both *ἀπό* and *ἐξ*, the local *whence* relation passes by like gradations into the causal, as

ἀπὸ τοῦ πάθους = because of the affliction,
ἐπράχθη τε ἀπ' αὐτῶν οὐδὲν ἔργον ἀξιόλογον =
 and by them nothing of moment was accomplished.
ἐκ πατέρων φιλότητος = because of our father's friendship,
τὰ ἐντεταλμένα ἐκ τοῦ Μάγον =
 what was commanded by the Magus.

a. *'Eξ* is used to denote change and dependence, as
ἄλλην ἐξ ἄλλης πόλεως ἀμειβόμενος =
 changing from one city to another,
φέρειν ἐκ τῶν ξωστήρων = to carry at the girdle,
πᾶς ἐκ Φοινίκων ἡρτητο ὁ ναυτικὸς στρατός =
 the whole naval armament depended on* the Phoenicians.

Obs. 2. *Ἀντί* and *πρό* (Latin, *ante*, *pro*, *prae*). Both *ἀντί* and *πρό* mean *before* locally; but *ἀντί* is properly used of things that match or correspond in some way, as the poles of a globe, or two

* We say 'independent of', but 'dependent on' an irregularity which cannot be admitted into French, so long as the simple verb *pendre* = 'to hang' exists to preserve the etymological meaning of *dépendre*. The irregularity in English is an example of the law by which the loss of etymology, giving scope for the operation of new analogies, leads to changes of construction.

combatants, whereas *πρό* means simply *before*, as when we say that a cart is before the door. As objects, to be compared, must be brought into each other's presence, both are used in the comparative sense of 'in preference to'.

a. *Ἀντί*. Because *ἀντί* is properly used of things that match, it is to be preferred in expressing the comparative meanings 'instead of', 'in exchange or return for'. Hence the phrases *ἀνθ' οὐ*, *ἀνθ' ὡν* = 'in return for which' = 'wherefore' = 'because'.

χάριν σοι οἴδα ἀνθ' ὡν ἡλθες =

I thank you that you are come.

In entreaties, *ἀντί* = 'because of', as

ἀντὶ παιδῶν τῶνδε ἵκετεύομέν σε =

for the sake of these children we beseech you.

Ἀντί is not used of time.

b. *Πρό* is used of time as well as of place; and because it may be used of things that don't match, it can express 'in defence of', whereas *ἀντί* rather implies opposition, as clearly appears in many of its compounds (§. 85. Obs. 3.):

οἰέσθαι πρὸ πόλεως = *pro patria mori*.

Πρό also denotes the internal cause, as

πρὸ χαρᾶς = *prae gaudio* = *vor Freude* = for joy.

In Homer and the tragedians, *πρό* is used to denote change, like *ξε*, as

γῆν πρὸ γῆς ξλαύνομαι = I hurry forward from land to land.

Obs. 3. *Ἐν*, *ἐνί* poetic, *εἰν* and *εἰνί* Epic (Latin *in* with the ablative), and *σὺν*, *ξύν* in old Attic, Doric, and Ionic (Latin *cum*), as denoting, the former position *in*, the latter joint position, i. e. *together with*, naturally take the dative, the case of the place *where*. Both are used of the *manner*, and of the *instrument*, as

ἐν τάχει = in haste, *σὺν τάχει* = with haste,

οφθαλμοῖς = to see with the eyes,

σὺν δὲ νεφέεσσι = with clouds,

and with clouds he covered the earth.

a. *Ἐν*, when referring to place, is variously translated *in*, *at*, *on*, *among*, as the phrase may require. The use of *ἐν* in expressions of time, as *ἐν ὡ* = 'whilst', is post-Homeric. Its use with moral states is frequent, as

ἐν ἡδονῇ μολ ἔστιν = it is pleasing to me.

b. *Σύν* is used neither of time nor of moral states. The local meaning *together with* passes naturally into various others according to the reference, as

σὺν θεῷ = with God's help,

σὺν τινὶ μάχεσθαι = to fight on some one's side,

σὺν τῷ δικαίῳ τὴν ψῆφον τίθεσθαι =

to give one's vote according to justice.

Obs. 4. *Εἰς*, *ἐς* in Ionic and old Attic, and in the poets for the sake of the metre, (Latin *in* with the accusative) = 'to, into', appropriately takes the accusative, the case of the place *whither*. This preposition is said to occur with the dative in inscriptions. Certain it is that with the accusative it is sometimes used for *ἐν* with the dative, as (Herod. VII. 239.)

ἐς τὸ χρηστήριον τὸ ἐς Δελφοὺς ἀπέπεμψαν =
they sent to the oracle which is *at* Delphi.

This use of *εἰς* for *ἐν*, which is frequent in the N. T., and ultimately prevailed to the expulsion of *ἐν* altogether from the spoken language, points to one primitive, whence the Greeks obtained their two forms *ἐν* and *εἰς*, and the Romans their single form *in* with its twofold construction.

With the name of a person, *εἰς* has sometimes the force of the French *chez* with a verb of motion, 'to the house of'; but in this meaning, the genitive is more common, the accusative case being understood (§. 68.). When *motion to* has a hostile intent, *εἰς* = 'against'. One of the commonest uses of *εἰς* is to denote the *limit*, whether of place, or time, or number, or ability. This preposition however sometimes expresses a *point* of time, and *duration*; and with numbers *distribution*, as

εἰς τὴν τρίτην ὥραν = at the third hour,
εἰς ἑνιαυτὸν = for a year, *εἰς ἑκατόν* = by hundreds.

Of metaphysical relations, it denotes generally *in respect of*; and more particularly the aim, and in the N. T. the *result*, as

φρόνιμος εἰς πάντα = prudent in every respect,
εἰς κέρδος τι δρᾶν = to do anything for gain,
(Rom. 1, 20.) *εἰς τὸ εἶγαι αὐτοὺς ἀναπολογήτον* =
so that they are without excuse.

Obs. 5. *Ἄνα*. In the Epic and lyric poets, and in the choral songs of the tragedians, *ἀνά* = *on* is found with the dative, as
χονσέω ἀνὰ σκῆπτρῳ = on a golden staff.

Elsewhere, *ἀνά* governs the accusative, and in this regimen is opposed to *κατά** with the same case, the former meaning 'up through', the latter 'down through', as

ἀνὰ τὸν ποταμόν = up the river,
κατὰ τὸν ποταμόν = down the river.

Where however there is no actual motion up or down, these two meanings coincide in *along*, *throughout*, *according to*, as

* Hence the adverbs *ἄνω*, *κάτω*, in relation to countries, denote, the former the interior, and the latter the coast. The force of *ἄνω* and *κάτω* is well brought out in the Romaic word *ἀνακατόνω* = 'I turn upside down': *ἄνω* *κάτω* has the same meaning *adverbially* in classic Greek.

ἀνὰ or κατὰ στρατόν = throughout the army,
 ἀνὰ or κατὰ τὸν πόλεμον = throughout the war,
 ἀνὰ or κατὰ κράτος = strongly.

'Ανά with numbers has a distributive force (§. 21. Obs. 1. a.), as
 ἔστησαν ἀνὰ ἑκατόν = they stood in bodies of a hundred each.

Obs. 6. Διά, cognate with δύο = 'two', and with the Latin *dis*, means 'through the midst of', and governs the genitive and accusative, because motion *through* may be regarded with equal propriety as having a *whence* and a *whither*.

a. Διά with the genitive. The nature of the verb usually indicates whether διά denotes the space, local or temporal, passed through, or the term arrived at on the transition being completed, as

διὰ πολλοῦ (χρόνου) ἥλθε = 'after a long time he came',
 διὰ πολλοῦ ἐμάχοντο = 'they fought *during* a long time'.

The temporal *after* gave rise to the distributive force of διά, as

διὰ πέντε ἑτῶν, or διὰ πέμπτου ἔτους =
 after five years, or the fifth year, i. e.
 every five years, or every fifth year.

Most other uses of διά with the genitive may be explained by *through* in the sense of 'by means of', as

δι' ὀφθαλμῶν ὄρᾶν = to see with the eyes,
 δι' οὐ καὶ τοὺς αἰῶνας ἐποίησεν =
 by whom also he made the worlds,
 διὰ βασιλέων πεφυκέναι = to be sprung from kings,
 δι' ἔλεφαντος πεποιημένον = made of ivory,
 διὰ τάχους = in haste = quickly,
 δι' οὐδενὸς ποιεῖσθαι = to count for nothing.

The primitive local force of διά must be reverted to in the explanation of those phrases with εἶναι and γίγνεσθαι, sometimes also with λέναι, ἔχεσθαι, πορεύεσθαι, which abound in Herodotus and in Attic, denoting mental states. The mind is conceived of as passing *through* the state in question, as

διὰ φόβου εἶναι = to be in fear,
 δι' ὄργῆς γίγνεσθαι τινί = to get into a rage with some one,
 διὰ φιλίας λέναι τινί = to be on friendly terms with some one,
 διὰ μάχης ἔρχεσθαι τινί = to fight with some one.

b. Διά with the accusative is found only in poetry in the sense of *through*, local, temporal, and instrumental. Its usual meaning with the accusative is causal, 'on account of', as

εἰ μὴ διὰ τοῦτον ἔφυγον ἦν = but for him, I should have fled.
 διὰ τί; = why? διό = δι' ὅ = wherefore,
 διότι = διὰ τοῦτο ὅτι = because that.

Obs. 7. *Kατά* (Obs. 5.). a. With the genitive, *κατά* means not only *down from*, but also *down to or on*, even *down against* implying hostility, as

βῆ δὲ κατ' Ὄλύμποιο καρήνων =

and he went down from the heights of Olympus.

κατὰ σκοποῦ τοξεύειν = to shoot at a mark,

οἱ κατὰ Δημοσθένους ἔπαινοι = the praises of Demosthenes,

λόγον κατὰ τινος ποιεῖσθαι =

to make a speech against some one.

In Attic, *κατά* is used with the genitive of the person or thing vowed or sworn *by*, sometimes also of the person or thing devoted, because, in the act of vowed or swearing, the hand is laid *down on* the person or thing in question.

b. With the accusative, *κατά* means *down along* with various modifications, as *throughout*, *according to*, *with respect to*, and even *with a view to*, which last meaning is especially frequent in Homer.

κατὰ γῆν τε καὶ θάλασσαν = over land and sea,

οὐ κατὰ Μιτραδάτην = not after the fashion of Mithradates,

κατὰ Σινώπην = in a line with Sinope,

πλάγεσθαι κατὰ ληΐδα = to rove in search of booty.

Adverbial expressions generally, distributive ones in particular, are largely formed with *κατά* = 'with respect to', as

κατ' ἀρχὰς = at first, *καθ' ὑπερβολήν* = exceedingly,

κατὰ συντυχίην = by chance, *καθό*, *καθότι* = inasmuch as,

κατὰ μῆνα = monthly, *καθ' ἡμέραν* = daily,

κατ' ἄνδρα = singly, *Ἐν καθ' ἐν* = one by one.

Obs. 8. *Τπέρ* (super) has the same elements of sound and the same radical meaning as the English *over*.

a. With the genitive, *ὑπέρ* is used of both position and motion *over*; hence metaphorically, *in behalf of*, *on account of*, and with the infinitive *for the purpose of*, as

ὁ ἥλιος ὑπὲρ ἡμῶν καὶ τῶν στεγῶν πορευόμενος =

the sun travelling over us and our roofs,

μάχεσθαι ὑπὲρ τῆς πατρίδος = to fight for one's country,

ὑπέρ πένθους ἀποθανεῖν = to die of grief,

ὑπὲρ τοῦ μὴ παθεῖν κακῶς ὑπὸ Φιλίππον =

in order not to be ill-treated by Philip.

Τπέρ with the genitive also denotes position *beyond*, as

ἐν Κρήτῃ εὐρεῖη τηλοῦ ὑπὲρ πόντον =

in wide Crete far away beyond the sea.

b. With the accusative, *ὑπέρ* means sometimes, as with the genitive, position *beyond*; but its most common use is to denote the limit, whether of place, of time, of number, or of ability, as

ὑπὲρ Ἑλλήσκοντος οἰκεῖν — to dwell beyond the Hellespont,
 ὑπὲρ τριάκοντα ἔτη γεγονός — beyond thirty years of age,
 μεγέθει ὑπὲρ τοὺς ἄλλους — in size beyond the others,
 ὑπὲρ ἡμᾶς τοὺς ἄλλους — *au-dessus de nous autres*, i. e.
 beyond our comprehension.

Τπέρ with the accusative also means *over and away*, as

ὑπὲρ ὠμον ἥλυθ' ἀκοκή —

the point went over his shoulder and away.

Obs. 9. *Ἄμφι* and *περί*. These differ less in signification than in the extent to which they are used. Properly *άμφι*, connected with *άμφω*, means 'on both sides', and *περί* 'all round'; but this distinction is not maintained. *Άμφι* is mostly confined to the Ionic dialect and to poetry; it does not occur in the N. T., and is the only ancient preposition which has not survived in the modern dialect.

a. With the genitive, both are used of the local *about*; but in this sense *περί* is poetic and rare, *άμφι* post-Homeric. Both are used, and largely, of the metaphysical *about*, i. e. *concerning*, as

μάχεσθαι ἀμφὶ, περὶ πατρίδος — to fight for one's country.
 Peculiar uses of *περί* with the genitive are to denote the *mental cause, superiority, and value*, the first two of these being almost confined to Homer, as

περὶ ἔριδος μάχεσθαι — to fight for very enmity,
 περὶ πάντων ἐμμεναι ἄλλων — to surpass all others,
 περὶ πολλοῦ ποιεῖσθαι, ἡγεῖσθαι — to esteem highly.

b. *Άμφι* with the dative is unknown in Attic prose; but elsewhere, it denotes a variety of local relations all implying nearness, as

στῆσαι τρίποδα ἀμφὶ πυρὶ — to put the kettle on the fire,
 ἀμφὶ κλαδοῖς ἐξεσθαι — to sit among branches,
 ἀμφὶ Νεμέα — at the Nemean games.

In Pindar, *άμφι* with the dative is used also of *time* and of the *instrument*, as

ἀμφ' ἐνὶ ἀλιῷ — in one day,
 θέλγει φρένας ἀμφὶ τε Λατοίδα σοφίᾳ —
 soothes the mind by the art of Apollo.

Περί with the dative has the strictly local force of *around*, as

θώραξ περὶ τοῖς στέρνοις — a breastplate round the chest.

Both are used with the dative for the metaphysical *about*, i. e. *concerning*, and of the *mental cause*, as

ἀμφὶ δὲ τῷ θανάτῳ αὐτῆς διέξος . . . λέγεται λόγος —
 and about her death two reports are told,
 θαρρεῖν περὶ τινι — to be of good cheer about something,
 ἀμφὶ φόβῳ — for fear, περὶ χάρητι — for joy.

c. With the accusative, both mean *about* in the three senses of *near to in place*, *near to in amount*, and *concerning*, as

οἱ ἄμφι or περὶ Πλάτωνα = Plato and his disciples,
 ἄμφι or περὶ τὸν μυρίον = about ten thousand,
 τὰ ἄμφι τὸν πόλεμον = the things which concern the war,
 αἱ περὶ τὸ σῶμα ἡδοναῖ = the pleasures of the body.

In Pindar, ἄμφι with the accusative also means *during*, as
 λοιπὸν ἄμφι βίοτον = for the rest of life.

Obs. 10. 'Επι. •The radical and prevailing force of this preposition is *on*, *upon*; but its uses are much more varied than those of its English equivalents.

a. With the genitive, ἐπί denotes the place *where*, and the time *when*, the latter with the names of persons more especially, as
 ἐπ', ἵππων ὥχεισθαι = to ride on horseback,
 ἐπ' εἰρήνης = in time of peace,
 ἐπὶ Δαρείου = in time of Darius.

The original local meaning is traceable in the following examples:

εἶπαν ἐπ' ὅρκου = they said on oath,
 ἐπὶ πολλῶν ἔστιν ἵδειν = in many things one may see,
 οἱ ἐπὶ τῶν πραγμάτων = those at the head of affairs,
 λέγειν ἐπὶ τίνος = to speak on some subject,
 καλεῖσθαι ἐπὶ πατρός = to be called after one's father,
 λέγειν ἐπὶ δικαστῶν = to speak before the judges.

The relation *whither (on to)* is also expressed by ἐπί with the genitive, as

ἐπὶ Σάρδεων φεύγειν = to flee to Sardes.

Noticeable also is the military phrase

ἐπὶ τριῶν τετάχθαι = to be ranked three men deep.

b. With the dative, as with the genitive, ἐπί denotes chiefly the local *on*, often equivalent to *near*, as

ἐπὶ τῇ θαλάσσῃ οἰκεῖν = to dwell near the sea.

This nearness is then narrowed into position *behind*, which is in relation to time *after*: thence arise *addition* and *succession*, as

οἱ ἐπὶ πᾶσι τεταγμένοι = the rear of an army,
 ἐπ', ἐξεργασμένοις = after all was over,
 ἐπὶ τούτοις = besides,
 φόνος ἐπὶ φόνῳ = murder on murder,
 ἐπη ἐπὶ δεκάτῃ = on the 16th.

The original local meaning is traceable in the following examples, in most of which the force of ἐπί is causal or instrumental:

οἱ ἐπὶ τοῖς πράγμασιν = those at the head of affairs,
 κεκλησθαι ἐπὶ τινι = to be called after some one,
 ἐπ', ἀργυρίῳ λέγειν = to speak for money,
 ἐπὶ τούτοις = on these terms,

<i>ἐπ'</i> οὐδενί	= on no account,
οὐκ ἐπὶ κακῷ	= not with a bad intention,
γελᾶν ἐπὶ τίνι	= to laugh at something,
ἐπὶ πείρᾳ	= by way of experiment,
ἐπὶ κωκυτῷ	= with wailing.

After verbs of motion, *ἐπὶ* with the dative means *against*, and with names of persons *in the power of*, as

ἐπὶ τίνι ιέναι βέλος	= to dart a shaft at some one,
ἐπὶ τίνι εἶναι	= to be in some one's power.

c. Almost all the meanings of *ἐπὶ* with the accusative are immediately derivable from the strictly local one *on to*: such as, *against*; *over*, of which the temporal equivalent is *during*; *up to*, marking the limit of time and number; and *for*, marking that which one goes to fetch, as

στρατεύεσθαι ἐπὶ Λυδούς	= to march against the Lydians,
ἀναβαίνειν ἐφ' ἵππον	= to mount on horseback,
πλεῖν ἐπὶ πόντον	= to sail over the deep,
ἐπὶ πολλὰς ἡμέρας	= during many days,
ἐπ' ἡώ	= until morning,
ἐπὶ τριηκόσια	= up to three hundred,
ἐπὶ βοῦν ἵτω	= let him go for an ox.

With the accusative, *ἐπὶ* forms the same sort of military phrase as with the genitive, and marks also authority *over*, a meaning more commonly expressed by it with the genitive or dative, as

ἐπὶ πολλούς τεταγμένοι	= ranged many men deep,
ἐπὶ τοὺς πεζοὺς καθιστάναι τινά	= to set some one over the infantry.

Obs. 11. *Μετά* (German *mit* = with) seems to be connected with *μέσος*, and means primarily with all cases *in the midst*, as
μετά τῶν νεκρῶν = among the dead,
μετ' ἀνδράσι = among men,
μετά χειρας ἔχειν = to have among one's hands, on hand.

a. With the genitive, *μετά* denotes *with*, less intimately however than *σύν* with the dative, and variously modified, as

μετὰ τοῦ νόμου διακινδυνεύειν	= to encounter danger with,
i. e. while acting in conformity with the law,	
μετά τινος μάχεσθαι	= to fight on some one's side,
μετ' ἀρετῆς πρωτεύειν	= to excel in virtue.

b. With the dative, *μετά* occurs only in poetry, chiefly Epic, and always in its primary sense.

c. With the accusative, *μετά* means *into the midst*, hence *after* in various senses, as in pursuit or quest, in time, in merit, in rank; and also in the sense of *according to*, as in the Scriptural phrase "after God's own heart",

ἀλοσων μετὰ χῆνας = rushing in among geese,
 βῆναι μετὰ Νέστορα = to go after Nestor, i. e. to join him,
 πλεῖν μετὰ χαλκόν = to go after copper, i. e. to seek it,
 μετὰ Σόλωνα οἰχόμενον = after Solon's departure,
 κάλλιστος ἀνὴρ . . . μετ' ἀμύμονα Πηλείωνα =
 the best man after the blameless son of Peleus,
 μετὰ σὸν καὶ ἐμὸν κῆρ = after your heart's desire and mine.

Obs. 12. *Παρά* has for its general primary meaning *beside*; and the modifications of this meaning, according as *μετά* is found with the genitive, the dative, or the accusative have been stated and exemplified in §. 11. a.

a. With the genitive, *παρά* sometimes denotes the agent after passive verbs, as

τὰ παρὰ τῆς τύχης δωρηθέντα = the gifts of fortune.

Only in a few poetic passages, is *παρά* found with the genitive in the sense of *at beside*, which belongs to the dative.

b. The proper local meaning of *παρά* with the dative, *at beside*, becomes the equivalent of the French *chez* = *at the house of*, and of the Latin *apud* with names of authors, as

παιδεύεσθαι παρά τινι = to be educated in some one's house,
 παρὰ Πλάτωνι = in the writings of Plato.

c. The pregnant use of preposition (§. 84.) is illustrated by *παρά* with the accusative after verbs of rest, as

κοιμήσαντο παρὰ πρυμνήσια =
 they (went and) slept beside the stern-cables.

The meanings of *παρά* with the accusative are twofold, according as they start from 'to beside and resting there', or 'to beside and away again'. From the former, come the meanings *along*, *by means of*, *throughout*, *during* (post-Homeric), and the force of *παρά* when denoting distribution and succession, as

παρὰ τὸν ποταμόν = along the river,
 παρὰ τὴν ἔαντον ἀμέλειαν = by his own carelessness,
 παρὰ τὸν πόλεμον = throughout, during the war,
 παρὰ πέντε ναυς = for every five ships,
 πληγὴν παρὰ πληγὴν = blow upon blow.

From the latter, come the meanings *beyond*, *contrary to*, *except*, as

παρ' ἐλπίδα = beyond, contrary to expectation,

παρὰ τέτταρας ψῆφους μετέσχε τῆς πόλεως =
 except four votes, he had the favour of the citizens.

The adverbial phrases *παρὰ μικρόν*, *παρὰ πολύ*, and the like, have two quite different meanings according as they are derived (α) from 'to beside and resting there', or (β) from 'to beside and away again', as

α $\{\pi\alpha\rho\dot{\alpha} \sigma\mu\iota\pi\rho\dot{\alpha} \kappa\epsilon\chi\omega\rho\eta\mu\}$ — has come to small issues,
 $\{\pi\alpha\rho\dot{\alpha} \text{ οὐδὲν τίθεσθαι}$ — to count for nothing,
 β $\{\pi\alpha\rho\dot{\alpha} \delta' \dot{\alpha}\lambda\dot{\iota}\gamma\dot{\iota}\text{ον} \dot{\alpha}\pi\dot{\epsilon}\phi\mu\gamma\text{ος}$ — you only just escaped,
 $\{\pi\alpha\rho\dot{\alpha} \mu\iota\kappa\dot{\rho}\dot{\alpha}\text{ον} \dot{\eta}\lambda\dot{\theta}\text{εν} \dot{\alpha}\kappa\dot{\theta}\mu\dot{\alpha}\text{ει}\text{ν}$ — he came within a little of
 dying.

Obs. 13. *Πρός* (*προτί*, *ποτί* in Homeric and Doric) is related to *πρό*, and has the same radical meaning *before* or *in front of*, modified into *motion from before* with the genitive, *rest before* with the dative, and *motion to before* with the accusative.

a. Motion *from before* arrested gives to *πρός* with the genitive the following meanings: *in presence of*, especially common in adjuration; *in the direction of*, i. e. *towards*, *against*, and *in favour of*, for position in front may be used for either offence or defence, as

πρός θεῶν — by (in presence of) the gods,
νησοι πρός Ήλιδος — islands in the direction of Elis,
φυλακαι πρός Αἰθιόπων — garrisons against the Aethiopians,
είναι τρός τινος — to be on some one's side.

Motion *from before* not arrested represents the *whence* relation, which is applied to lineal descent, to what may be called moral descent, i. e. the congruity of actions with the character from which they proceed, to mechanical transmission from one to another, and hence to the means or agency by which anything is done, as

πρός μητρός — by the mother's side,
πρός δίκης ἐστίν — it is right,
τιμῆν πρός Ζηνὸς ἔχοντες — having honour from Jove,
πρός ἄλληλοιν θανεῖν — to be killed by one another.

b. *Πρός* with the dative, besides its proper local meaning, *rest before*, variously developed into *in presence of*, *near to*, *at*, has also that of *in addition to*, as

πρός τούτοις — moreover.

c. The primary meaning of *πρός* with the accusative, *to before*, easily yields *against*, *towards* seldom used of time, *with a view to*, *with reference to*, *in consequence of*, *in comparison of*, as

μάχεσθαι πρός τινα — to fight against some one,
ἀποβλέπειν πρός τι — to look away towards something,
πρός σωτηρίαν — for safety,
τέλειος πρός ἀρετήν — perfect in virtue,
πρός τοῦτο τὸ κήρυγμα — in consequence of this proclamation,
πρός πάντας τοὺς ἄλλους — compared with all the others.

Obs. 14. 'Τπό (sub) = 'under'. a. With the genitive, properly *from under*, but also simply *under* — in which sense however the dative is more usual, except with verbs of hitting — *under the influence of*, and hence *by* with the agent, as

νεκρὸν ὑπ' Αἴαντος ἐρύειν = to drag the corpse from under Ajax,
τὸν βάλ' ὑπὸ γναθμοῖο = struck him under the jawbone,
ὑπὸ δέους = under the influence of fear,
ὑπ' αὐλοῦ χορεύειν = to dance to the flute,
πεπαιδευμένος ὑπό τινος = educated by some one.

b. 'Τπό with the dative means *under* locally, logically, and in respect of power, as

ὑπὸ ποσσί = under the feet,
τὰ ὑπὸ τῇ μουσικῇ = what comes under music,
ποιεῖν τι ὑπό τινι = to subdue something under somebody.

In Homer especially, ὑπό with the dative is often used of the agent, and, like ὑπό with the genitive in phrases like *ὑπ' αὐλοῦ χορεύειν*, it can denote the attendant circumstance.

c. 'Τπό with the accusative denotes *to beneath*; simply *under*, like ὑπό with the dative, locally, logically, and in respect of power; and in definitions of time *about*, sometimes also *during*, as

ὑπ' Ἰλιον ἥλθον = they came to Troy (Troy being conceived of as lofty).
τῷ ὑπὸ γῆν λεγομένῳ εἰναι θεῷ = to the god said to be under the earth,
ποιεῖν τι ὑπό τινα = to subdue something under some one,
ὑπὸ νύκτα = *sub noctem* = towards night-fall,
πάνθ' ὑπὸ μηνιθμόν = all through the wrath.

§. 84. **Pregnant Construction of Prepositions.** This occurs when prepositions are construed in connexion with a verb of motion as they logically ought to be in connexion with a verb of rest, or *vice versâ*; and this construction is called *pregnant*, because in the one case a verb of motion, and in the other a verb of rest is implied to account for the construction. The pregnant construction is said to be most common with *ἐν* and *εἰς*, but the more frequent interchange of these two prepositions may be due to their common origin (§. 83. Obs. 4.).

ἀπὸ τῆς ἔμῆς κεφαλῆς τὴν κεφαλὴν ἀναδήσω = from my own head (taking it) I shall bind it on his.
ἐκ ποταμοῦ χρόα νίξετο = (with water taken) from the river he washed his body.
**ἐν χερσὶ τινος τιθέναι τι* = to put something (into), (and let it remain) in some one's hands,

* Exactly so, we say in English, not only 'to put *into* a

ἔφανη λῖς . . . εἰς δόδόν =

a lion (stepped) into the road and appeared (there).

ἐπ' ἡπείροιο ἔρυσσαν =

drew the ships (to, and left them) on the land,

πέτονται ἐπ' ἄνθεσιν = fly (to, and settle) on flowers,

ἵσο παρ' αὐτόν = (go) to him, and sit (beside him).

ἰέναι παρὰ Τισσαφέρνει =

to go (to, and stay) with Tissaphernes,

ἔσταναι πρὸς κίονα =

to (go) to, and stand (beside) a pillar,

ποτὶ δὲ σκῆπτρον βάλε γαίη = and he threw his sceptre (to, and left it) in the ground.

φεύγειν ὑπό τινος = to flee (driven) by some one.

Obs. **Analogous Use of the Local Adverbs.** The same principle accounts for the confusion which pervades all language, more or less, in the use of local adverbs, as *where* for *whither*. Thus

(Soph. Trach. 40.) *κεῖνος δ' ὅπον βέβηκεν οὐδεὶς οἶδε =* and where he is gone, no one knows, i. e.

whither he is gone, and where he now is, no one knows, the verb implying motion *to*, and the adverb rest *in* a place.

(Aristoph. Av. 8.) *ὅποι γῆς ἔσμέν =*

where we are, i. e. whither we have come and where we are the adverb implying motion *to*, and the verb rest *in* a place. The pregnant use of local adverbs formed into a substantival phrase by the article (§. 6. c.) is also common, as

(Aristoph. Plut. 227.) *τοῦτο δὲ τὸ κρεάδιον τῶν ἐνδοθέν τις εἰσενεγκάτω λαβάν =* but let some one of those (who are within come) from within, and take and carry in this bit of meat.

§. 85. Prepositions in Composition. *a.* In respect of syntax, verbs are the compounds chiefly to be considered; and it is worth noting that only prepositions *proper* (§. 51.) can be compounded with verbs of a primitive form. Whenever any other part of speech, even an improper preposition (§. 51.), is to be compounded with a verb, that verb assumes a derivative form, as if the compound had first existed as a noun or adjective. Thus

person's hands', but also 'to put in his hands'; and in Latin, *ponere in manibus*.

(όμοιος λέγω) ὁμοιογέω	from ὁμοιογία,
(εὖ τυγχάνω) εὐτυχέω	from εὐτυχής,
(νόμος τίθημι) νομοθετέω	from νομοθέτης,
(μέτριος πάσχω) μετριοπαθέω	from μετριοπαθής.

Tried by this classic usage, the word *telegram* is a barbarous formation; for

(ξέσον γράφω) ξωγραφέω	from ξωγράφος, ξωγράφημα,
(τῆλε γράφω) τηλεγραφέω	from τηλέγραφος, τηλεγράφημα.

b. The syntax of compound as of simple verbs depends on their meaning (see *προορᾶν* §. 74. Obs.). The distinction between a preposition as such, and a preposition in its original adverbial use (§. 51.) is of great importance in considering the syntax of compound verbs. Used adverbially, the preposition affects the syntax of the compound verb only when it not merely intensifies or slightly modifies, but changes the meaning of the simple one; used in its proper force as a preposition, it always takes the same case as it does out of composition.

Obs. 1. *Από* (adv.) = *off*, implies separation, and hence completion, as *ἀποδίδωμι* = 'I give back'; *ἀπεργάζομαι* = 'I work off, i. e. complete'.

Από (prep.) = *from*, as

πόσον ἀπέχω πόλεως; = how far am I from town?

Obs. 2. *Ἐξ* (adv.) = *out*, often implies completeness by the same analogy which accounts for the general meaning of *almost*, the superlative of *out*, as *ἐξοπλίζεσθαι* = 'to furnish out', i. e. 'to thoroughly arm'; *ἐκμανθάνειν* = 'to learn thoroughly'.*

Ἐξ (prep.) = *out of*; but the following genitive is usually governed by *ἐκ* repeated out of composition, as

ἐκβῆναι ἐκ νεάς = to step out of a ship.

* It is a fine instance of that caprice in language which now accepts and now rejects an analogy, that the verbs *ἐκμανθάνω* and *ἀπομανθάνω* have at length exchanged significations. In Ancient Greek

ἐκμανθάνω = I learn off,

ἀπομανθάνω = I unlearn i. e. forget;

in Modern Greek, exactly the reverse.

Obs. 3. *Ἄντι* (adv.) implies opposition and interchange, as
 $\tauῇ ἀληθείᾳ ἀντιλέγειν$ = to speak against the truth,
 $ἀνταδικεῖν ἀλλήλους$ = to retaliate on one another.

Ἄντι (prep.) = *instead of*, as
 $ἀντιτιθέναι τὴν ἐμπειρίαν τῆς μελέτης$ =
 to put experience in the place of study.

Nouns and adjectives are formed with *ἀντί* denoting substitution and correspondence, as

$ἀντιβασιλεύς$ = viceroy, $ἀντίθεος$ = godlike,
 $ἀντίτυπος$ = answering to the die.

Obs. 4. *Πρό* (adv.) = *forwards* or *forth*, with the idea sometimes of publicity, and *beforehand*, as

$προβαίνειν$ = to advance, $προειπεῖν$ = to foretell,
 $προγράψειν$ = to proclaim in writing.

Πρό (prep.) = *in defence of*, and *over* in the sense of superiority, as

$προκινδυνεύειν τοῦ πλήθος$ = to brave danger for the
 people,
 $προστάτεῖν τῆς πόλεως$ = to be ruler over the city.

Nouns are formed with *πρό* denoting priority in place or rank, and publicity, as $πρόδομος$ = 'entrance-hall', $πρόεδρος$ = 'president', $πρόξενος$ = public guest. Also adjectives, *πρό* denoting *forth*, priority, and intensity, as

$πρὸ ὁδοῦ ἐγένοντο$ = they were forth or forward on the way,
 $πρόδριξος$ = up by the roots, $πρόωρος$ = untimely,
 $πρόπεν ἡμαρ$ = all day long, $φροῦρος$ = departed.

Obs. 5. *Ἐν*. The kinship between *ἐν* and *εἰς* (§. 83. Obs. 4.) appears in the regimen of the verbs compounded with *ἐν*, which is sometimes the dative, and sometimes the accusative with or without *εἰς*. *Ἐμπίκτειν* is found in all the three ways. The proper local force of *ἐν* can generally be traced in the compound.

Adjectives formed with *ἐν* generally denote the possession of some characteristic, as

$ἐνάκανθος$ = with thorns in it, i. e. thorny,
 $ἐννομος$ = with law in it, i. e. legal.

Sometimes however *ἐν* has the force of our adjectival termination — *ish*, as $ἐνσιμος$ = 'flattish-nosed'.

Obs. 6. *Σύν* (adv.) = *together*, and hence *thoroughly*, as
 $συγχροτῆσαι τὰ χεῖρες$ = to clap the hands,
 $συγκρύπτω δέμας ὄπλοις$ = I cover over my body with armour.

Σύν (prep.) = *together with* takes in composition the dative of the cooperator, as

$συγχαιρεῖν τινὶ τῶν γεγενημένων$ =
 to congratulate some one on what has taken place.

Σύν compounded with cardinal numerals gives them a distributive meaning, as **σύνδυο** = 'two and two'.

Obs. 7. **Εἰς**. The compounds take the accusative, often with **εἰς** repeated before the noun; but **εἰσέρχεσθαι** and **εἰσιέναι** are also found with the personal dative, in the sense of *occurring to one's mind*, or of *encountering things external*.

Obs. 8. **Ἄντα** is always an adverb in composition, meaning *up*, from which its intensifying force is easily derived. One form of intensification is repetition, *again*; and kindred with that is return, *back*, as

ἀναπηδᾶν = to jump up, **ἀναβοᾶν** = to cry aloud,
ἀναχωρεῖν = to return, **ἀναπετάννυμι** = I spread forth,
ἀναδιδάσκειν τὰ δράματα = to represent the dramas again.

Obs. 9. **Διά** is always an adverb in composition, with the radical meaning *through*, hence *thoroughly*; moreover *through* in one direction implies *division*, *through* in several directions, *dispersion*, as

διέρχεσθαι = to traverse, **διεργάζεσθαι** = to carry through,
διαιρεῖν = to divide, **διαδίδοναι** = to distribute.

The conception of duality suggested by **διά** appears strongly in some compounds, as **διάδω** = 'I sing with another', i. e. 'contend with him in singing'. The compounds of **διά** take the accusative except such as signify simply *difference*, which take the genitive, or difference with the accessory idea of *strife*, which take the dative.

In compound adjectives, the radical meaning of **διά** still appears, as **διάλευκος** = 'with white through', i. e. 'partly white'.

Obs. 10. **Κατά** (adv.) = *down*, the opposite of **ἀντά**,* has also an intensifying power, and in words denoting the return of exiles the force of *back*, as

καταπηδᾶν = to jump down, **καταφαγεῖν** = to eat up,
κατάγειν = to bring back an exile,
κατέρχεσθαι = to come back from exile.

* All men nod *down* or *forwards* in assenting; but the ancient Greeks, like the modern, also nodded *up* or *back* in dissenting. Even the language of signs therefore has its dialects, an upward or backward movement of a Greek head being translated in the rest of Europe by a shake. Accordingly,

κατανεύω = I assent, **κατάφημι** = I affirm,
ἀνανεύω { = I dissent, **ἀπόφημι** = I deny.

The same **ἀπόφημι**, when **ἀπό** marks completeness (§. 85. Obs. 1.), means 'I speak out' i. e. 'declare plainly'.

Hence $\eta\ \kappa\acute{\alpha}\theta\delta\alpha\sigma\tau\omega\nu\ 'H\varrho\alpha\kappa\lambda\epsilon\iota\delta\omega\nu$ = 'the return of the Heraclidae'. The intensifying power of $\kappa\alpha\tau\alpha$ is also shown when it converts an intransitive into a transitive verb, as

$\vartheta\varrho\eta\eta\acute{\epsilon}\omega$ = I wail, $\kappa\alpha\tau\alpha\vartheta\varrho\eta\eta\acute{\epsilon}\omega$ = I bewail.

And the same appears in adjectives, as $\kappa\alpha\tau\alpha\pi\kappa\lambda\epsilon\sigma\sigma$, = 'quite full'.

$\kappa\alpha\tau\alpha$ (prep.) = *down against* in compound verbs of accusing and condemning (§. 75. Obs. d.) takes the genitive of the person. The same construction is found with $\kappa\alpha\tau\alpha\gamma\epsilon\lambda\alpha\nu$, and $\kappa\alpha\theta\eta\beta\varphi\iota\zeta\mu\alpha\iota$.

Obs. 11. $\mathcal{T}\pi\acute{\epsilon}\varrho$ (adv.) = *over* in the sense of *exceedingly*, as
 $\bar{\nu}\pi\epsilon\varrho\mu\iota\sigma\epsilon\iota\nu$ = to hate beyond measure.

$\mathcal{T}\pi\acute{\epsilon}\varrho$ (prep.) = *over* in respect of place or superiority, and as meaning *in defence of*, takes the genitive in composition, as

$\bar{\nu}\pi\epsilon\varrho\acute{\epsilon}\chi\epsilon\iota\nu\ t\iota\ t\bar{\eta}\bar{\varsigma}\ \vartheta\alpha\lambda\acute{\alpha}\sigma\sigma\eta\sigma$ =

to hold anything out above the sea,

$\bar{\nu}\pi\epsilon\varrho\acute{\epsilon}\chi\epsilon\iota\nu\ t\iota\n\acute{\sigma}\bar{\varsigma}$ = to surpass any one,

$\bar{\nu}\pi\epsilon\varrho\mu\alpha\chi\epsilon\iota\nu\ t\iota\n\acute{\sigma}\bar{\varsigma}$ = to fight for any one.

The adverbial meaning of $\bar{\nu}\pi\acute{\epsilon}\varrho$ is frequent in adjectives.

Obs. 12. $\acute{\alpha}\mu\varphi\iota$ (adv.) = *all round*, as
 $\acute{\alpha}\mu\varphi\iota\delta\acute{\epsilon}\varrho\mu\alpha\iota$ = I look on all sides.

$\acute{\alpha}\mu\varphi\iota$ (prep.) = *about*, in the sense of *for the sake of*, occurs in a very few verbs governing the genitive, as

$\acute{\alpha}\mu\varphi\iota\mu\acute{\alpha}\chi\mu\alpha\iota$, $\acute{\alpha}\mu\varphi\iota\tau\varrho\mu\acute{\epsilon}\omega\ t\iota\n\acute{\sigma}\bar{\varsigma}$ =

I fight, I tremble for some one.

With adjectives, the relation of $\acute{\alpha}\mu\varphi\iota$ to $\acute{\alpha}\mu\varphi\omega$ clearly appears, as
 $\acute{\alpha}\mu\varphi\iota\sigma\tau\mu\mu\sigma\sigma$ = 'double-tongued'.

Obs. 13. $\pi\acute{\epsilon}\varrho\iota$ (adv.) = *round*, *around*, *excessively* (Latin *per*), as

$\pi\acute{\epsilon}\varrho\iota\acute{\alpha}\gamma\omega$ = I lead round to the same point again,

$\pi\acute{\epsilon}\varrho\iota\beta\lambda\acute{\epsilon}\pi\omega$ = I look around,

$\pi\acute{\epsilon}\varrho\iota\alpha\lambda\gamma\bar{\omega}$ = I am in exceeding great pain,

$\pi\acute{\epsilon}\varrho\iota\tau\acute{\epsilon}\xi\acute{\epsilon}\nu\omega$ = I shoot an arrow beyond some one.

$\pi\acute{\epsilon}\varrho\iota$ (prep.) = *before* in quality (Latin *prae*) takes the genitive, as
 $\pi\acute{\epsilon}\varrho\iota\gamma\iota\gamma\acute{\nu}\mu\acute{\epsilon}\theta\alpha\ t\bar{\eta}\bar{\varsigma}\ \acute{\alpha}\bar{\lambda}\bar{\lambda}\bar{\omega}\bar{\nu}$ = we are superior to the rest.

The adverbial $\pi\acute{\epsilon}\varrho\iota$ = Latin *per*, is common in compound adjectives.

Obs. 14. $\acute{\epsilon}\pi\acute{\epsilon}\iota$ (adv.) = *on* implying accumulation, repetition and succession, as

$\acute{\epsilon}\pi\acute{\epsilon}\mu\alpha\eta\acute{\theta}\acute{\alpha}\gamma\epsilon\iota\nu$ = to learn in addition,

$\acute{\epsilon}\pi\acute{\epsilon}\beta\lambda\alpha\sigma\tau\acute{\alpha}\gamma\epsilon\iota\nu$ = to sprout anew,

$\acute{o}\iota\ \acute{\epsilon}\pi\acute{\epsilon}\gamma\iota\gamma\acute{\nu}\mu\mu\iota\iota$ = they who are coming after.

The adverbial $\acute{\epsilon}\pi\acute{\epsilon}\iota$ is much used to intensify the meaning of verbs: compare $\alpha\bar{\lambda}\bar{\omega}$ and $\acute{\epsilon}\pi\acute{\epsilon}\bar{\lambda}\bar{\omega}$, $\kappa\varrho\alpha\tau\acute{\epsilon}\omega$ and $\acute{\epsilon}\pi\acute{\epsilon}\kappa\varrho\alpha\tau\acute{\epsilon}\omega$.

$\acute{\epsilon}\pi\acute{\epsilon}\iota$ (prep.) = *on* in a great variety of uses, as *rest on*; *motion on*, i. e. *over*; *motion on to*, i. e. *against*; *position behind*, that

which is placed behind being thought of as leaning *on* what stands before it. In this last sense, and generally also in the sense of *against*, *ἐπί* takes the dative: in the other senses, it takes sometimes the dative, sometimes the accusative; and with both cases *ἐπί* is often repeated:

ἐπιτάττειν τοὺς μισθοφόρους τῇ φάλαγγι =
to mass the mercenaries behind the phalanx.

Obs. 15. *Μετά* (adv.) = *reversely*, implying change (Latin *trans*): *μεταμόρφωσις* = *transformatio*. This meaning is derivable from the original one, *in the middle*, by supposing motion there; for a person remaining in the middle would yet, by moving round his own axis, have his position changed in regard to surrounding objects. Compare *τρέπω*, and *μετατρέπω*, *νοέω* and *μετανοέω*. Even *μεθίημι* = 'I let off, implies a change of condition.

Μετά (prep.) = *between*, but only in nouns and adjectives, *among, along with, into the midst of*, hence *after* as in pursuit:

μεταίχμιον = the space between two armies,
ἀθανάτοισι μετεῖναι = to be among immortals,
μεταμέλπεσθαι τινι = to dance or sing with any one,
μετέχειν τινός τινι* = to share in something with somebody,
μετέρχεσθαι τινα = to go after some one.

Obs. 16. *Παρά* (adv.) = *aside* implying change generally, and change for the worse in particular, *amiss*, as

παραπλάσσειν = to transform,
παρασπονδεῖν = to violate a treaty,
παρερμηνεύειν = to misinterpret.

Παρά (prep.) = *beside*, takes the dative; *to beside and away*, i. e. *past* or *beyond*, the accusative, as

παραπληθῆσθαι τινι = to sit beside any one,
παραπλεῖν τόπον = to sail by a place,
παραβαίνειν νόμον = to transgress the law.

Obs. 17. *Πρός* may be regarded as always a preposition in composition, implying *motion to* or *addition to*, and governing the dative, except indeed sometimes in the former sense with places, as
προσέρχεσθαι Σωκράτει = to go to Socrates as a teacher,
προσιέναι δόμους = to approach the house,
προσλαμβάνειν τὸ ἀναίσχυντον τῇ συμφορᾷ = to get shame besides disaster.

Obs. 18. *Τπό* (adv.) = *underneath, underhand*, as
ὑποδέω = I shoe, *ὑπόχρυσος* = gold beneath,
ὑπέξειμι = I steal forth, as in a sortie.

* The genitive which attends verbs of *participation* is partitive (§. 13. a.), and is not governed by *μετά* in composition.

Τπό (prep.) = *under*, used both of locality and of rank, and commonly with the dative, except when motion *to beneath* is implied, in which case the accusative is used, as

νπογράφειν στήλη = to write at the bottom of a slab,
νποβάλλειν ἔχθροις ἐμαντόν = to put myself under the foe,
νπήλυθε Θάμνον = he went beneath the bushes.

With adjectives, νπό is the most common equivalent of the English termination *-ish*, and is in this sense the opposite of κατά (§. 85. Obs. 10.), as

νπόλευκος = whitish, νπόκικρος = bitterish.

§. 86. Conjunctions. Those which coordinate (§. 52.) connect for the most part like cases and moods. Those which subordinate (§. 59.) connect clauses only; and for the most part, the verb in the clause subordinated is of the Subjunctive or Optative Group, whilst that of the principal clause is of the Indicative Mood.

a. Compounds of αν. All conjunctions containing αν, whether αν has coalesced as in έαν, δταν, or remains separate as in έως αν, take forms of the Subjunctive Group. On the other hand, these same conjunctions without αν, i. e. ει, δτε, έως take Indicative and Optative forms. In the Ionic and Doric poets, ει is found with forms of the Subjunctive Group; but in Attic, this usage occurs only in the choral odes and archaic phraseology of the law (Madv. §. 125. Rem. 2.).

b. Final Conjunctions. When used in the proper sense, *in order that*, to denote a purpose, ώς, δπως, ίνα, and the Epic δφρα require forms of the Subjunctive or of the Optative Group according as the principal verb is in an unaugmented or an augmented tense of the Indicative. In the same sense, they are found also with the future Indicative* (§. 35. Obs. 2.); but in this con-

* With the future Indicative, δπως also means *on condition that*, as (Soph. Oed. T. 1518.)

γης μ' δπως πέμψεις αποικον =
on condition that you send me from the land a banished man.

struction, there seems to be a mingling of two kindred aspects viz. purpose and result.

c. Consequential Conjunctions. An *actual* consequence or result is expressed by $\ddot{\omega}\sigma\tau\epsilon$, rarely $\ddot{\omega}\varsigma$, with the Indicative; a *conditional* result, by $\ddot{\omega}\sigma\tau\epsilon$ with the potential $\ddot{\alpha}\nu$ and some tense of the Indicative, Optative, or Infinitive, or by $\ddot{\omega}\sigma\tau\epsilon$ with the Optative alone; an *expected* result, by $\ddot{\omega}\sigma\tau\epsilon$ with the Infinitive*, but very often, through $\lambda\iota\tau\sigma\tau\eta\varsigma$, an actual result also is thus expressed; an *impossible* or *unfulfilled* result, by the final conjunctions $\ddot{\omega}\varsigma$, $\ddot{\delta}\pi\omega\varsigma$, $\ddot{\iota}\nu\alpha$ with augmented tenses of the Indicative. Of all these, only the first form expressing an actual result is negated by $\sigma\bar{u}$, the others, expressing what belongs to the realm not of fact but of conception, are negated by $\mu\bar{h}$.

"*Αργος ἀνδρῶν ἔχηρώθη οὐτως, ὅστε οἱ δοῦλοι ἔσχον* : *πάντα τὰ πρήγματα* = Argos was so bereft of its male citizens, that the slaves had all business (in their hands) — *actual* result.

εἰ *τις χρῶτο τῷ ἀργυρῷ ὅστε . . . κάκιον τὸ σῶμα ἔχοι,*
κ. τ. λ. = if any one should use money, so that his body should be the worse for it &c.— *conditional* result.

* With the Infinitive, $\ddot{\omega}\sigma\tau\epsilon$ too sometimes means *on condition that*, as we say, *so always that*; and after comparatives, it introduces that which is incommensurable with what precedes, as

(Dem. p. 68. 11.) *ἔξον αὐτοῖς τῶν λοιπῶν ἀρχειν Ἑλλήνων, ὁστ’ αὐτοὺς ὑπακούειν βασιλεῖ* = they being allowed to rule over the other Greeks, on condition that they themselves be subject to the king.

(Herod. III. 14. 42.) *ω παῖς Κύρου, τὰ μὲν οἰκήσα ήν μέξω κακά, η ὁστε ἀνακλαίειν* = O son of Cyrus, these domestic ills were too great for loud lamentation.

Kindred to this last usage, is that of $\ddot{\omega}\sigma\tau\epsilon \mu\bar{h}$ in the following passage (Soph. Phil. 340.)

οἴμαι μὲν ἀρκεῖν σοὶ γε καὶ τὰ σὰ . . . ἀλγήματα, ὁστε μὴ τὰ τῶν πέλας στένειν = I think you have troubles enough of your own to deplore, *without* lamenting those of your neighbours.

οὗτως ἄφρων ἦν ὥστε μηδὲ βούλεσθαι ἐγκρατῆς ἔαντον γενέσθαι = he was so senseless as not even to wish to become master of himself — *expected* or *actual* result.

(Soph. Oed. T. 1387.) ἀλλ' εἰ τῆς ἀκονούσης ἔτ' ἦν πηγῆς δι' ὥτων φραγμὸς, οὐκ ἀν ἐσχόμην τὸ μὴ ποκλεῖσαι τούμὸν ἄθλιον δέμας, ἵν' ἦν τυφλός τε καὶ κλύων μηδέν = but, were stoppage possible of that fountain of hearing by the ear, which is still open, I should not refrain from closing up this wretched body of mine, so that I might be both blind and deaf — *impossible* result.

§. 87. **Interjections.** Interjections are frequently used without any regimen at all, as

ὦ, ὦ, μηδαμῶς, μὴ πρὸς θεῶν βέλος ἄφης = take care, take care, no, for the gods' sake, on no account let fly the dart.

The interjection ὦ, when simply vocative, takes of course the vocative case; but when the interjections are outcries of passion, they take the genitive of that *whence* the passion has arisen, i. e. the causal genitive (§. 13. Obs. 3.), as

(Eur. Hip. 366.) ὦ τάλαινα τῶν δ' ἀλγέων =

Oh wretched me, on account of these woes!

(Aristoph. Av. 1131.) ὦ Πόσειδον τοῦ μάκρους =

Oh Neptune, what a length!

ὦ τῆς μωρίας = O, the folly!

οἴμοι τῶν κακῶν = Alas, the ills!

Οἴμοι τὰ κακά is also found, the ills being regarded as the *object* on which grief is spent, rather than the source whence grief arises.

When the vocative is accompanied by an adjective, ὦ generally precedes both, the more emphatic of the two immediately following it, as ὦ καλοὶ παιδεῖς, ὦ φάος ἀγνόν. In this latter example, φάος precedes, because

light is worshipped as light, the opposite of darkness, and ἀγνόν = 'pure' is a mere ascription of praise. A form of adjuration may also stand between ὦ and the vocative, as

ὦ πρὸς Διὸς Μέλιτε = Oh, by Jove, Melitus!

Sometimes, mostly in Epic, ὦ stands between the vocative and the accompanying adjective, either of which may occupy the first place.

PART III. SYNTAX OF SENTENCES.

§. 88. **Order of Words in a Sentence.** *a.* The logical order of collocation is the same in Greek as in English, i. e. the subject, with all that belongs to it, stands first, and then the predicate, with all that belongs to it. The emphatic positions in a sentence being the beginning and end, particularly the former (except in a flight of oratory, where the concluding words are often the most emphatic of all), this order is often inverted even in English, for the purpose of conveying not only the thought but the mode of its conception; in other words, for the purpose of expressing not only the logical but also the rhetorical element. Thus, we perceive a difference between "Great is Diana of the Ephesians", and "Diana of the Ephesians is great". These sentences differ only in collocation; yet the latter is merely a proposition, while the former is an outcry of passion as well. The logical order is wrongly called *natural* as opposed to a rhetorical inversion of it; because an outburst of passion is as truly within the domain of nature, as is the utterance of a thought. How natural in the circumstances is the inversion of the logical order in the authorised version of Acts. 3. 6.

'Aργύριον καὶ χρυσῖον οὐχ ὑπάρχει μοι ==
Silver and gold have I none.

In the Greek here, the logical order happens to be rhetorical also.

b. In English however, as in all languages where the declinable parts of speech have a limited inflexion, the power of varying the collocation of words in a sentence is comparatively small: juxtaposition, and *set*

forms of collocation are necessarily resorted to for the purpose of shewing how the words are related to one another. Thus “you love the children”, differs from “the children love you” only in collocation; yet these sentences express two different thoughts, and the collocation could not be changed in either case without damage to the meaning. But in Greek, $\sigma\upsilon\alpha\gamma\alpha\pi\alpha\tilde{\gamma}\varsigma\tau\alpha\tau\acute{e}k\nu\alpha$, and $\tau\alpha\tau\acute{e}k\nu\alpha\sigma\acute{e}\alpha\gamma\alpha\pi\omega\varsigma\iota$, may be collocated anyhow, and will always mean respectively the same thing, with the same clearness, simply because the terminations of the Greek pronoun and verb are different for different cases and persons. In like manner, correspondence of case-ending shewed the Greeks that two words, though distant from each other in a sentence, referred to the same thing, whereas our only resource in English, to denote this community of reference, is juxtaposition. Freed in this way, to so great an extent, from set forms, the *animus loquentis* was the chief element determining the arrangement of words in Greek composition; and their apparent dislocation is usually seen to be effective collocation, when the reader enters into the spirit of his author.*

Obs. 1. Details of the Logical Order. In the logical order, the subject stands first and the predicate last, whatever is in apposition to the subject being *appended* to it, and whatever words belong to the predicate being *prefixed* to it, in an order dictated by the intimacy of their connexion with the predicate, as

* The student may aid his conceptions in this matter by trying in how many ways, according to the *animus loquentis*, he can collocate a sentence of ordinary English. Thus, ‘I have been so engaged today writing letters, that I could not attend the committee’, is the logical order; but, if the *day* were important, as in the case of a man who had not missed a day till this one, he would say ‘*Today I have been &c.*’; if again he wanted to make the *reason* of his non-attendance prominent, he would begin ‘*So engaged have I been &c.*’; and again, if he had been annoyed by the particular *mode* of his occupation, he might, in the impotence of English to completely invert the sentence, betake himself to repetition, and say ‘*Letters, letters, I have been so engaged to-day writing letters &c.*’.

οἱ Ἑλληνες οἱ ἄτρομοι ταύτη τῇ ημέρᾳ ἐν Μαραθῶνι τὸν
Πέρσας ἐνίκησαν = the Greeks, dauntless fellows, conquered
the Persians at Marathon on this day.

The *immediate* object of the predicate *immediately* precedes it, and the circumstance of *place* is nearer the predicate than that of *time*. When a verb governs two cases, the accusative, being the immediate object, stands next the predicate; and when the two cases are two accusatives, that of the thing stands nearer than that of the person, as

τὸν παιδα τὴν γραμματικὴν διδάσκω =

I teach the boy grammar.

In Greek as in English, adverbs usually stand close beside the words whose meaning they affect.

Subordinate clauses do the work of substantives, adjectives, or adverbs, and are classified accordingly (§. 1. Obs. 4.). Hence they occupy in a compound sentence whatever place belongs to the part of speech they represent. E. G. a relative clause, being adjectival in function, takes the place of the adjective, immediately after the noun to which it relates; and a declarative clause, being substantival in function, takes the place of the substantival object, immediately after the *verbum declarandi* on which it depends, as

οἱ δ' ἔλεγον ὅτι ἄρκτοι πολλοὺς ἥδη διέφευραν =

and they said that bears had already destroyed many.

If for οἱ δ' ἔλεγον were substituted ἔλέγετο, the declarative clause would then be the subject to ἔλέγετο, and would still follow it.

Obs. 2. Forms of Rhetorical Collocation. In Homer, the sentences are as short, and the style as simple as in an English ballad,* because Homer was a minstrel of the people; but in laboured compositions, especially in those prepared with a special view to the highly educated and critical, artificial forms of collocation were used for effect. For reasons already mentioned (§. 88. b.), these can seldom be imitated in English.

a. *Hyperbaton*, of which emphasis is the effect, consists in the separation of words that belong to each other, and therefore usually stand together, as of the noun and its adjective:

(Il. II. 483.) ἐκπρεπές' ἐν πολλοῖσι καὶ ἔξοχον ἡρώεσσιν =
illustrious and eminent among many heroes.

* Adherence to the simplicity and order of common discourse is one main reason why the historical portions of the New Testament are so intelligible to us; another is the more frequent indication of case-relations by means of prepositions; and a third is the more frequent indication of the verbal subject and object by means of pronouns than is usual in classical Greek (§. 24. a.).

Comparatives are often so separated from such words as *πολύ*, *πολλώ* used to strengthen them.

b. *Chiasmus*, named with reference to the letter X, has the same effect as hyperbaton, but consists in the collocation of four words or clauses so as to exhibit a correspondence among them crosswise, i. e. a correspondence between the first and fourth, and again between the second and third, as

πολλάκις ἡδονὴ βραχεῖα μακρὰν τίκτει λύ-

πην = brief pleasure often begets long grief.

This one example illustrates both chiasmus and hyperbaton.

Obs. 3. Words never First. No indefinite, whether declinable as *τις*, or indeclinable as *ποτέ*, can begin a sentence: neither can any of the following particles, *ἄρα*, *αὐ*, *γάρ*, *μέν*, *δέ*, *δὴ*, *νῦν*, *οὖν*, *τέ*, *τοί*, *τοίνυν*, which generally stand after the first or second word of the sentence. To these add *ἄν* potential (§. 49. Obs. 1.).

§. 89. Declarative Clauses i. e. clauses depending on a verb *sentiendi vel declarandi*.

a. The three ways of framing such clauses in Greek, viz.

α. by *ὅτι*, *ὡς* with a finite verb,

β. by the Infinitive with or without an accusative,

γ. by a participle agreeing with the subject or object of the principal verb,

have been already (§. 1. Obs. 5. §. 46. Obs. a.) illustrated. So truly are these three constructions equivalent that they are sometimes interchanged, as (Thuc. III. 3. 3.)

ἐσηγγέλθη γὰρ αὐτοῖς ὡς εἴη Ἀπόλλωνος . . . ἔορτὴ, ἐν ᾧ πανδημεὶ Μυτιληναῖοι ἔορτάζουσιν, καὶ ἐλπίδα εἴναι επειγθέντας ἐπιπεσεῖν ἄφνω = and it was told them that there was a festival of Apollo which the Mytilenæans celebrated in mass, and that there was a chance, if they made haste, of falling suddenly upon them.

b. In respect of declarative clauses formed with the finite verb, *ὡς*, as compared with *ὅτι* rather implies hesitation. As in English *that* is often omitted before the declarative clause, so in Greek *ὅτι*, *ὡς* sometimes, as (Herod. IV. 135. 9.)

προφάσιος τῆσδε δηλαδὴ, αὐτὸς μὲν σὺν τῷ καθαρῷ τοῦ στρατοῦ ἐπιθήσεσθαι μέλλοι τοῖσι Σκύθησι = under the following pretext viz. (that) he was going to attack the Scythians with the flower of his army.

When the *verbum declarandi* is passive, *ὅτι* may be avoided by substituting the personal for the impersonal construction, as (Xen. Cyr. I. 2. 1.)

Φῦναι δὲ Κῦρος λέγεται ἔτι καὶ νῦν ὑπὸ τῶν βαρβάρων, εἴδος μὲν κάλλιστος, ψυχὴν δὲ φιλανθρωπότατος = Cyrus is even yet said by the barbarians to have been most handsome in person and most humane in soul, where φῦναι δὲ Κῦρος λέγεται = λέγεται ὅτι πέφυκεν δὲ Κῦρος.

c. The real subject of the declarative clause often appears not as such, but as the object of the preceding *verbum sentiendi vel declarandi*; and great compactness is obtained by this idiom, which is called *Antiposis*, as (Luke VI. 34.)

οἶδά σε τίς εἰ = I know thee who thou art.

ἔσθετο τό τε Μένωνος στράτευμα, ὅτι ἦδη ἐν Κιλικίᾳ ἦν = and he perceived Menon's army, that it was already in Cilicia.

καὶ μοι τὸν νιὸν εἰπὲ εἰ μεμάθηκε τὴν τέχνην =

and tell me whether my son has learned the craft.

In this last example, the preservation of the Greek order in English is impossible, unless indeed *τὸν νιὸν* be translated not strictly as the direct object of *εἰπέ*, but as loosely introduced, according to the colloquial style, to mark the principal object of thought or discourse; in which case, the Greek can be imitated in English thus, 'and as for my son, say whether &c.' So (Aristoph. Nub. 1113.)

τοὺς κριτὰς ὃς κερδαίνουσι βουλόμεσθ' ὑμῖν φράσαι = as for the judges, what they get, we want to tell you.

§. 90. **Final Clauses.** a. When expressed by a conjunction and the finite verb, final clauses are introduced

by $\omega\varsigma$, $\delta\pi\omega\varsigma$, $\tilde{\iota}\nu\alpha$, and the Epic $\delta\varphi\varrho\alpha$, all = *in order that*, and forms of the Subjunctive Group or of the Optative according to the law for the sequence of tenses (§. 40.), as

$\gamma\rho\acute{\alpha}\varphi\omega\tilde{\iota}\nu\alpha\mu\acute{\alpha}\vartheta\eta$ = *scribo ut discat*,
 $\tilde{\iota}\gamma\varrho\alpha\varphi\alpha\tilde{\iota}\nu\alpha\mu\acute{\alpha}\vartheta\eta\iota$ = *scripsi ut disceret*.

But in process of time, forms of the Subjunctive Group gradually replaced those of the Optative till, as in the Greek of the New Testament (§. 40. Obs. 2. b.), the Optative forms became obsolete in this connexion. Moreover, both the forms of the Subjunctive Group and those of the Optative are replaced by the future Indicative even in classic Greek, after $\omega\varsigma$, $\delta\pi\omega\varsigma$ often, sometimes also after $\tilde{\iota}\nu\alpha$ and the Epic $\delta\varphi\varrho\alpha$, as

(Hom. Il. XVII. 452.) $\text{O}\varphi\varrho\alpha\kappa\grave{\alpha}\iota\text{A}\acute{\iota}\tau\text{o}\mu\acute{\epsilon}\delta\text{o}\nu\tau\alpha\sigma\alpha\omega-$
 $\sigma\epsilon\tau\text{o}\nu\tilde{\epsilon}\kappa\pi\text{o}\mu\text{o}\iota\text{o}$ = *That ye may rescue Automedon too from the war.*

(Xen. Cyr. I. 3.) $\text{K}\acute{\epsilon}\text{l}\text{e}\text{u}\text{e}\text{n}\text{s}\text{o}\text{n}\kappa\grave{\alpha}\iota\tilde{\epsilon}\mu\text{o}\iota\delta\text{o}\text{u}\text{n}\text{v}\text{a}\iota\tau\grave{\iota}\tilde{\epsilon}\kappa\pi\text{a}\text{u}\text{a}$,
 $\tilde{\iota}\nu\alpha\kappa\grave{\alpha}\gamma\grave{\omega}\dots\grave{\alpha}\nu\alpha\kappa\tau\tilde{\epsilon}\text{s}\text{o}\mu\alpha\iota\sigma\grave{\epsilon}$, $\tilde{\eta}\nu\delta\text{u}\text{n}\text{v}\text{a}\text{u}\iota$ = *bid him hand the cup to me also, that I too may win your favour, if I can.*

b. Final clauses after verbs of *motion* are also expressed by the relative pronoun with the same forms of the finite verb as are used with conjunctions; but after the relative pronoun forms of the Subjunctive Group are extremely rare, whereas the future Indicative is very common as a substitute both for the forms of the Subjunctive Group, and for those of the Optative, as

(Thuc. VII. 25. 1.) $\kappa\grave{\alpha}\iota\alpha\tilde{\nu}\tau\tilde{\omega}\nu\mu\acute{\alpha}\mu\grave{\epsilon}\nu\tilde{\epsilon}\varsigma\text{P}\acute{\epsilon}\text{e}\text{l}\text{o}\text{p}\text{o}\text{n}\text{n}\text{u}\text{h}\text{o}\text{n}\text{o}\nu\tilde{\omega}\text{χ}\text{e}\text{t}\text{o}$, $\pi\text{o}\acute{\epsilon}\text{s}\text{b}\text{e}\text{e}\text{i}\text{s}\tilde{\alpha}\text{γ}\text{o}\text{u}\text{n}\text{s}\text{a}\text{o}\tilde{\iota}\text{π}\text{e}\text{ρ}\text{t}\text{a}\text{r}\text{a}\text{t}\text{e}\text{σ}\text{φ}\text{e}\text{t}\text{e}\text{ρ}\text{a}\text{φ}\text{ρ}\acute{\alpha}\text{s}\text{ω}\text{s}\text{i}\text{v}\text{.}\text{τ}\text{.}\text{λ}$ = *and one of them (the ships) went to the Peloponnesus, conveying ambassadors who should both declare the state of their own affairs &c.*

(Eur. Iph. T. 1177.) $\kappa\grave{\alpha}\iota\pi\acute{\omega}\text{l}\text{e}\text{i}\text{p}\text{e}\text{μ}\text{v}\text{p}\text{o}\text{n}\text{t}\text{i}\text{v}\tilde{\epsilon}\delta\text{s}\text{t}\text{i}\text{c}\text{s}\sigma\eta\mu\alpha\nu\epsilon\tilde{i}$ = *and send some one to the city who shall (who may, that he may) give notice.*

(Demosth. *De F. Leg.* §. 180.) *κήρυκα προαπεστείλατε
οστις ἥμιν σπείσεται* == ye sent a herald before us
who should make a truce for us.

c. Sometimes a purpose is expressed by the genitive of the article with the Infinitive (§. 13. Obs. 3. b.); and not unfrequently, with or without ὡς, by the Infinitive alone or by the future participle, as

*ἔτειχίσθη δὲ καὶ Ἀταλάντη, τοῦ μὴ ληστὰς κακουργεῖν
τὴν Εὐβοιαν* == and Atalanta too was fortified, that
robbers might not commit depredations in Euboea.

*ἥλθεν ἀδικεῖν }
ἥλθεν ἀδικήσων }* == he came to perpetrate wrong.

§. 91. Relative Clauses. Owing to the participial wealth of the Greek verb, relative clauses are by no means so frequent in Greek as in Latin. In this respect indeed, there is more than difference, there is opposition between the two languages. Whereas Latin writers delight to repeat *qui*, often superseding thereby the use of a copulative conjunction, the Greek relative is not repeated in successive clauses, even when a change of construction would necessitate a change in its case (§. 67. Obs. 3. a.). .

a. The relative with *ὅν* (§. 29.) uniformly takes a form of the Subjunctive Group; but when alone, except sometimes in final clauses (§. 90. b.), the relative takes the Indicative, whatever tense the meaning may require; and it does so, contrary to the analogy of Latin, even when it introduces a reason, as (Aristoph. *Nub.* 1377.)

*Οὐκονν δικαίως (σὲ ἐπέτριψον) οστις οὐκ Εὐριπίδην
ἐπαινεῖς;* == Did I not (beat thee) justly who i. e. *in-
asmuch as thou* praisest not Euripides? (*qui E. non
laudes.*)

b. The relatives *οἷος*, *οἵσος*, kindred in force to *ὡστε* (§. 86. c.), are generally followed by the Infinitive, as (Soph. *Oed.* T. 1295.)

Θέαμα δ' εἰσόψει τάχα τοιοῦτον οἶον καὶ στυγοῦντ' ἐποικτίσαι = and thou shalt speedily see a sight such as would draw pity even from an enemy.

Obs. Comparative Sentences. These are expressed by relative adverbs, which are really conjunctions, and their demonstrative correlates (§. 49. Obs. 4.), viz. by

ώς, ὡστε, ὡσπερ { . . . οὖτως, ὡδε, ὡς = as . . . so.
οπως, Epic ἡντε {

The verb in comparative sentences is never Optative, is sometimes of the Subjunctive Group, but most commonly in the Indicative, as

(Il. II. 474.) ὡστ' αἰπόλια πλατέ' αἰγῶν αἰπόλοι ἀνδρες δεῖα διακρίνωσιν, ἐπεὶ κε νομῶ μιγέωσιν, ὡς κ. τ. λ. = as goatherds may easily divide their numerous flocks, after they have been mingled in the pasture, so &c.

(Il. XV. 383.) ὡστε μέγα κῦμα θαλάσσης . . . νηὸς ὑπὲρ τολγῶν καταβήσεται . . . ὡς κ. τ. λ. = as a great wave of the sea shall dash over a ship's bulwarks, so &c.

The English *the . . . the* in a parallelism of comparatives, for which superlatives are sometimes substituted in Greek, is rendered by ὁσῳ . . . τοσούτῳ, i. e. by a relative word and its demonstrative correlate, as (Thuc. VIII. 84. 1.)

ὁσῳ μάλιστα καὶ ἐλεύθεροι ἡσαν . . . οἱ ναῦται, τοσούτῳ καὶ θρασύτατα . . . τὸν μισθὸν ἀπήγτον = the more free the sailors were, the more boldly they demanded their pay.

§. 92. Temporal Clauses. How time is marked by the Greek participles has been already (§. 46. a.) pointed out. By other parts of the verb,

a. Time *when* is marked by

ὅτε, Epic εὗτε, δόπτε, ὡς
ὡσπερ, ὅκως in Herodotus, } with the Indicative,
ὅπως in Attic poetry, ἡνίκα, } as

ὅτε ἐσάλπιγξεν, ἥρξαντο τῆς μάχης =

when the trumpet sounded, they began the battle.

b. Time *whenever* is marked, in reference to past events, by ὅτε, δόπτε, ὡς, ὅπως, εἴ πον, with the Optative (§. 40. Obs. 1. b.), as

τὸν Πλάτωνα ἤκουεν, δόπτε ἐν' Αθήναις διατρέψοι = he used to attend Plato, whenever he stayed in Athens.

εἰ πον ἔξελαύνοι, περιῆγε τὸν Κῦρον = whenever he went out riding, he used to take Cyrus with him.

In reference to present and future events, by

ὅταν, διπόταν, ὡς ἄν, } with the Subjunctive
ὅπως ἄν, ἐπήν later *ἐπάν,* } Group, as
 Ionic *ἐπεάν, ἐπειδάν,*

τότε δὴ, διταν ἀς χρή ποιῆς, εὐτυχεῖς = then truly, whenever you do what you ought, are you happy.

c. Time *whilst*, merely as time, is marked by

ἐν ὅ, ἔως, ὅφρα in poetry, with the Indicative, but when the connexion of cause and effect underlies the notion of present or future time, and the whole interval, not a mere point in it, is meant, by

ἔως ἄν with the Subjunctive Group.

Compare

χρησμοὺς ἔνεγκε, ἔως καθεύδει =
bring forth the oracles, whilst he is asleep,
σιωπᾶτε, ἔως ἄν καθεύδῃ = hold your peace, whilst
(i. e. as long as, and because) he is asleep.

d. Time *until that* is marked, in reference to past events, by

ἔως, ἔως οὐ, τέως in post-Homeric Epic writers and sometimes in Attic prose, *εἰς δ, ἔστε, μέχρις οὐ,* } with the Indicative, as
ἄχρις οὐ, μέχρι, ἄχρι and *ὅφρα* in poetry; and after negative clauses
πρὶν, πρὶν ή, πρὶν ή ὅτε,
τὸν φίλον ἐφύλαξα, ἔως ἀπέθανεν =
I tended my friend, till he died,
οὐ πρότερον ἀνωλόλυξε, πρὶν ή ήδικήθη =*
he did not cry out, till he was hurt.

After negative clauses, *πρὶν* may also be used with the Infinitive, as

οὐ πρότερον ἐσάλπιγξε, πρὶν σὲ κελεῦσαι =
the trumpet was not sounded till you gave the order.

* A pleonastic *πρότερον* or *πρόσθεν* is exceedingly common.

In reference to future events, by

{ ἔως ἀν, ἔστι ἀν, ὄφρο ἀν in
poetry, Epic εἰσόκε, μέχρις
ἀν, ἀχρις ἀν in poetry; and } with the Subjunctive
Group, as
after negative clauses πρὶν ἀν,
ἔως ἀν θῶ τοὺς ἔχθρους σου ὑποπόδιον τῶν ποδῶν
σου = till I make thine enemies thy footstool,
οὐχὶ παύσομαι πρὶν ἀν σὲ τῶν σῶν κύριον στήσω
τέκνων = I shall not cease till I make you possessor
of your own children.

After negative clauses, πρὶν ἀν may also be used with the Infinitive; and very frequently ἀν is omitted.

e. Time *before that* after negative clauses is the same as time *until that* just treated of. After positive clauses, time *before that* is marked, in reference to past events, by

{ πρὶν, πρὶν ἦ, πρὶν ἦ ὅτε
πρὶν, πρὶν ἦ } with the Indicative
with the Infinitive } , as
ἀνωλόλυξε πρὶν γ' ὄρας κατὰ στόμα χωροῦντα λευκὸν
ἀφρόν = lifted up her voice, *before at any rate she*
saw white foam playing about her mouth.

πρὶν τέτταρα στάδια διελθεῖν, ἐντυγχάνουσι τοὺς στρα-
τιώτας = *before completing four stadia, they come*
upon the soldiers.

In reference to future events, time *before that* is marked by

πρὶν, πρὶν ἦ with the Infinitive, as
τεθνήξεται πρὶν ἐμὲ ἀφικέσθαι =
he will be dead *before I arrive.*

Time *before that*, in reference to both past and future events, may also be expressed by πρὸ τοῦ with the Infinitive, and by means of φθάνω = 'I anticipate', as

φθάνεις ἔλκων ἦ τὰ πτηνὰ φεύγειν =
you draw (your nets) *before the birds escape*,
(lit.) 'you anticipate drawing', ἦ being justified by the
notion of priority implied in φθάνεις. The same verb
is used transitively to denote priority, as

ἔφθην αὐτοὺς ἀφικόμενος = I arrived before them.

f. Time *after that* is marked by

ἐπει, ἐπειδή, ἐξ οὐ, } with the Indicative, as
 ἐξ ὅτου, ἐξ ὅν, ἀφ' οὐ, }
 ἐπειδὴ ἀφίκοντο of σύμμαχοι, ἔφυγον of πολέμοι =
 after the allies arrived, the enemy fled.

Obs. **Causal Force of Temporal Conjunctions.** The causal force has already (§. 92. c.) been pointed out as arising from the temporal. It remains now to add that, though the cause precedes of course the effect, yet, whenever the effect is not momentary but continued, the cause may also be thought of as contemporaneous with the effect, sustaining it. Hence, not only ἐπει, ἐπειδή implying antecedence, but also ὅτε, ὅπότε, ως implying contemporaneity, are used in a causal sense, but only with the Indicative and the finite potential forms, as

(Il. XXI. 95.) μή με κτεῖν' ἐπεὶ οὐχ ὁμογάστρος "Εκτορός εἰμι = slay me not, since (for) I am not the same mother's son with Hector.

(Plat. Prot. p. 335. D.) δέομαι, οὐν σοῦ παραμεῖναι ἡμῖν, ως ἐγὼ οὐδ' αὐτὸς ἡδιον ἀκούσαμει η σοῦ = I pray you to remain with us, since (for) there is not any one to whom I would listen with more pleasure than to yourself.

§. 93. Conditional Sentences. These consist of two clauses, one called *protasis* containing the condition, the other called *apodosis* containing the consequence which stands or falls with the condition. The protasis is introduced by εἰ* with the Indicative or Optative, and by εἴν with the Subjunctive Group: the apodosis is expressed by the Indicative, the finite potential forms, and the Imperative. Different formulae imply different relations between the supposition made and what is presumed to be fact:

Formulæ.

Their force.

a. εἰ with any tense of the indicative, and } Supposition viewed
 without αὐτὸν potential in the apodosis. } as Fact. †

* 'Εφ' ωτε = 'on condition that' is more commonly followed by the Infinitive than by the Indicative.

† More accurately, this formula is neutral, merely putting the supposition as, for the time at any rate, fact; but for that very

<i>Formulæ.</i>	<i>Their force.</i>
<i>b. εἰ</i> with any augmented tense of the Indicative, and with <i>ἂν</i> potential in the apodosis.	Supposition viewed as Not-Fact.
<i>c. Εἰ</i> with the Sujunctive Group.	Supposition viewed as Probably Fact.
<i>d. εἰ</i> with the Optative Group.	Supposition viewed as Probably Not-Fact.

These four shades of meaning in the protasis can be fairly represented by the English verb, as

- a. εἰ ταῦτα λέγει* = if he says so (which he does),
- b. εἰ ταῦτα ἔλεγεν* = if he said so (which he didn't),
- c. Εἰ ταῦτα λέγῃ* = if he say so (which is likely)
- d. εἰ ταῦτα λέγοι* = if he should say so (which is not likely).

Suppositions regarding the past can be made only by the Indicative, the augmented tenses of course. But the imperfect Indicative often puts a Not-Fact-Supposition regarding the present, the general or the actual present, in which case

εἰ ταῦτα ἔλεγεν = if he were now saying so:

yet not always, as (Xen. M. S. 1. 1. 5.)!

δῆλον οὐν δτι οὐκ ἀν προέλεγεν, εἰ μὴ ἐπίστευεν ἀληθεύσειν = it is evident then that he would not have foretold, unless he had believed he would turn out a true prophet,

where Socrates' *constant* belief and *usual* manner of discourse are in question.

Here follow complete examples shewing along with the different forms of protasis the corresponding forms of apodosis:

reason it is the proper formula for suppositions which the speaker believes to accord with fact, as

εἰ θεὸς ἔστι, Εἰστι καὶ ἔργα θεοῦ =
if God exists, there exist also works of God.

a. $\varepsilon\acute{\iota}\tau\acute{\alpha}\nu\tau\alpha\lambda\acute{e}g\acute{\iota}\iota$, $\left\{ \begin{array}{l} \acute{\alpha}\mu\alpha\varrho\tau\acute{\alpha}\nu\iota, \\ \acute{\alpha}\nu\alpha\pi\acute{\epsilon}\iota\acute{\theta}\acute{\epsilon}\acute{\sigma}\acute{\theta}\omega, \\ \acute{o}\nu\kappa\acute{e}\acute{u}\tau\acute{u}\chi\acute{h}\acute{\sigma}\acute{\iota}\iota. \end{array} \right.$
 = if he says so, $\left\{ \begin{array}{l} \text{he is mistaken,} \\ \text{let him change his mind,} \\ \text{he will not prosper.} \end{array} \right.$

$\varepsilon\acute{\iota}\tau\acute{\alpha}\nu\tau\alpha\acute{\xi}\acute{e}\acute{g}\acute{\iota}\iota$, $\left\{ \begin{array}{l} \acute{\eta}\mu\alpha\varrho\tau\acute{\epsilon}\iota\iota, \\ \acute{\alpha}\nu\alpha\pi\acute{\epsilon}\iota\acute{\theta}\acute{\epsilon}\acute{\sigma}\acute{\theta}\omega, \\ \acute{o}\nu\kappa\acute{e}\acute{u}\tau\acute{u}\chi\acute{h}\acute{\sigma}\acute{\iota}\iota. \end{array} \right.$
 = if he said so, $\left\{ \begin{array}{l} \text{he was mistaken,} \\ \text{let him change his mind,} \\ \text{he will not prosper.} \end{array} \right.$

b. $\varepsilon\acute{\iota}\tau\acute{\alpha}\nu\tau\alpha\acute{\xi}\acute{e}\acute{g}\acute{\iota}\iota$, $\acute{\eta}\mu\acute{\alpha}\varrho\tau\acute{\alpha}\nu\iota\acute{\epsilon}\nu$ =
 if he were saying so, he would be making a mistake.
 $\varepsilon\acute{\iota}\tau\acute{\alpha}\nu\tau\alpha\acute{\xi}\acute{e}\acute{g}\acute{\iota}\iota$, $\acute{\eta}\mu\acute{\alpha}\varrho\tau\acute{\epsilon}\iota\acute{\epsilon}\nu$ =
 if he had said so, he would have made a mistake.

c. $\acute{\epsilon}\acute{\alpha}\nu\tau\acute{\alpha}\nu\lambda\acute{e}g\acute{\eta}$ or $\lambda\acute{e}\acute{\xi}\acute{\eta}$, $\left\{ \begin{array}{l} \acute{\alpha}\mu\alpha\varrho\tau\acute{\alpha}\nu\iota, \\ \acute{\alpha}\nu\alpha\pi\acute{\epsilon}\iota\acute{\theta}\acute{\epsilon}\acute{\sigma}\acute{\theta}\omega, \\ \acute{o}\nu\kappa\acute{e}\acute{u}\tau\acute{u}\chi\acute{h}\acute{\sigma}\acute{\iota}\iota. \end{array} \right.$
 = if he say so habitually,
 or once for all, $\left\{ \begin{array}{l} \text{he is mistaken,} \\ \text{let him change his mind,} \\ \text{he will not prosper.} \end{array} \right.$

The aorist in the protasis of this formula has often the force of the English future-perfect, as

$\nu\acute{e}\acute{o}\acute{s}\acute{\epsilon}\acute{\nu}\pi\acute{o}\acute{n}\acute{\eta}\acute{\sigma}\acute{\eta}\acute{\varsigma}$, $\gamma\acute{\eta}\acute{\rho}\acute{\alpha}\acute{\varsigma}\acute{\acute{\xi}\acute{e}\acute{e}\acute{\iota}\acute{\varsigma}}$ $\acute{e}\acute{u}\acute{\theta}\acute{\alpha}\acute{l}\acute{\acute{\epsilon}\acute{\iota}\acute{\varsigma}}$ = if you shall have laboured when young, you will have a prosperous old age.

d. $\varepsilon\acute{\iota}\tau\acute{\alpha}\nu\tau\alpha\lambda\acute{e}g\acute{\iota}\iota$, $\acute{\alpha}\mu\alpha\varrho\tau\acute{\alpha}\nu\iota\acute{\epsilon}\nu$, $\varepsilon\acute{\iota}\tau\acute{\alpha}\nu\tau\alpha\acute{\xi}\acute{e}\acute{g}\acute{\iota}\iota$, $\acute{\alpha}\mu\acute{\alpha}\varrho\tau\acute{\epsilon}\iota\acute{\epsilon}\nu$ = $\left\{ \begin{array}{l} \text{if he should say so,} \\ \text{he would be making} \\ \text{a mistake.} \end{array} \right.$

If *habitual* saying so and mistaking are meant, the present tense is used; if only a *single* instance, the aorist (§. 40. c.). This last form of apodosis, viz. the Optative with $\acute{\epsilon}\acute{\nu}$ potential, was the most common, probably because it was the least direct, and therefore the most polite: it may be used with any protasis whatever, but is seldom found with that of formula (b).

The above combinations are the most usual; but in each case, it is the sense which determines what form of apodosis must be appended to what form of protasis.

Here, for example, are combinations differing from the above:

εἰ τότε ἐβοηθήσαμεν, οὐκ ἀν ἡνώγχει νῦν ὁ Φίλιππος = if we had given our aid then, Philip would not now be troubling us.

εἰ αὐτάρκη ψηφίσματα ἦν, Φίλιππος πάλαι ἀν ἐδεδώκει δίκην = if decrees were of themselves sufficient, Philip would long ago have paid the penalty.

Obs. Concessive Sentences. These are just conditional sentences in which the protasis and apodosis are adversative. Accordingly, concessive sentences are expressed by the same formulae as conditional sentences, with the addition of certain adversative words:

εἰ καὶ, ἔαν καὶ . . . ὥμως = if even } = although . . . yet.

καὶ εἰ, καὶ ἔαν . . . οὐμως = even if } = even if . . . yet.

πόλιν μὲν, εἰ καὶ μὴ βλέπεις, φρονεῖς δ' ὥμως, οὐκ νόσῳ *ξύνεστιν* = blind though you are, yet you perceive in what an evil case the city is.

ἄνθρωπος, καὶ εἰ ἦν ἀθάνατος, οὐκ ἀν εἴη εὐδαίμων = man, even if he were immortal, would not be happy.

§. 94. Interrogative Sentences. *a.* The speaker's tone of voice, represented by the writer's mark of interrogation, without any specially interrogative word, may shew that a question is put, as

"Ελληνες δύνεται βαρβάροις δουλεύσομεν; = Greeks as we are, shall we become slaves to barbarians?

And very frequently such questions are emphasized by *εἰτα, ἔπειτα*, as

εἰτ' ἔστιγας Πλούτος ὅν; =

and did you then hold your tongue, you Plutus?

Questions put with *οὐ* or any of its compounds, as *οὐκοντιν* (§. 58. Obs.), expect the answer *yes*: those put with *μή*, or any of its compounds expect the answer *no*.

b. Besides interrogative pronouns (§. 27.) and adverbs (§. 49. Obs. 4.), the most common signs of interrogation are the particles *ἄρα, νή*, neither of which, used alone, implies what kind of answer, positive or negative, is expected. But other particles are generally sub-

joined to them; and then various formulae arise, which may be classified into two sets, according as the answer anticipated by the question is *yes* = *ναὶ*, or *no* = *οὐ*.

Questions.

ἀρ̄ο̄ς οὐκ,
η̄ οὐκ,
η̄ γάρ,
ἄλλο τι η̄,
ἄλλο τι.

Questions.

ἀρ̄ο̄ς μή,
η̄ πον,
μῶν (= μή οὐν).

Positive Answers.

πάνυ μὲν οὖν, παντάπασιν μὲν οὖν,
κομιδὴ μὲν οὖν, παντάπασι γε,
πανυ γε, σφόδρα γε, μάλιστα γε,
πάντως δή, καὶ μάλα, μάλιστα,
πάντως δὴ πον.

Negative Answers.

οὐ δητα,
οὐδαμῶς,
η̄πιστα γε.

Answers, both positive and negative, may also be made with the appropriate tense of *φημί*, or *εἰμί*, and by repeating the emphatic word of the question, as

ἀρ̄ο̄ς οὐ φθέγγεται Ἑλληνιστί; φθέγγεται. =
he speaks Greek, doesn't he? he does.

ἀρ̄ο̄ς μή φθέγγεται Ἑλληνιστί; οὐδαμῶς. =
he doesn't speak Greek, does he? not at all.

The most remarkable of these formulae is *ἄλλο τι η̄*, which may be explained by supplying the same ellipsis as is supposed to exist in the Latin *nihil aliud quam rident*, as

ἄλλο τι (sc. ποιεῖς) η̄ περὶ πλείστου ταῦτα ποιῆ; =
(lit.) Do you do anything else than regard these things as of the highest consequence? i. e. you regard these things as of the highest consequence, don't you?

c. Double questions are put by the following formulae, which are arranged in the order of their frequency in Attic, beginning with the most frequent:

πότερον	...	η̄	}
πότερα	...	η̄	
ἀρ̄ο̄ς	...	η̄	
μῶν	...	η̄	
η̄ (poetic)	...	η̄	

= whether . . . or.

If there are more particulars than two in the interrogative series, *η̄* is repeated with each. Sometimes the

sign of interrogation is omitted before the former of two alternatives: sometimes on the other hand, the second alternative is suppressed altogether, as (Soph. Phil. 1235.),

πότερα δὴ κερτομέων λέγεις τάδε; =
whether sayest thou this now in mockery?
i. e. in mockery or in earnest.

When the second alternative is negative, agreeably to the grand distinction between *οὐ* and *μή* (§. 48.), *η* *οὐ* is used when the negation applies to the finite verb, *η* *μή* when it applies to any other word, as

(Plat. Rep. V. 473. a.) *ἀλλὰ σὺ πότερον δμολογεῖς οὐτῶς, η οὐ;* = well then, whether do you consent thus far, or not?

(Plat. Phaedr. p. 263. c.) *Tί οὖν; τὸν Ἔρωτα πότερον φῶμεν τῶν ἀμφισβητησίμων η τῶν μή* = What then? are we to say that Love belongs to debatable or to undebatable things?

Obs. Indirect Questions. The difference between a direct and an indirect question, when specially marked at all, is marked in Greek, not as in Latin by a change of mood in the verb used, but by a change in the word or form of the word introducing the question. Lists of correlated indirectly interrogative pronouns (§. 27.) and adverbs (§. 49. Obs. 4.) have been already given. Other specially indirect interrogative forms are

Single Questions	<i>εἰ</i>	= whether.
Double Questions	<i>εἰ . . . η</i> <i>εἰτε . . . εἰτε</i> <i>εἰτε . . . η</i> <i>εἰ . . . εἰτε</i> { poetic	= whether . . . or.

Compare the interrogative and verbal forms in the following:

<i>Direct Questions.</i>	
<i>ποῦ τράπωμαι;</i> =	
where am I to turn to?	
<i>ἀρα παρῆν ἔκεινος;</i> =	
was he present?	

<i>Indirect Questions.</i>	
<i>οὐκ οἶδα ὅποι τράπωμαι</i> =	
I don't know where I am to turn to.	
<i>οὐκ οἶδα εἰ παρῆν ἔκεινος</i> =	
I don't know whether he was present.	

Direct Questions.

πότερον ἔπαιξεν η̄ ἐσπούδαξεν; = whether was he joking or serious?

Indirect Questions.

η̄δει οὐδεὶς εἰ ἔπαιξεν η̄ ἐσπούδαξεν * = nobody knew whether he was joking or serious.

Some of the forms used for putting direct questions are also used for putting indirect ones, particularly *ἄρα* when the question is single, and *πότερον . . . η̄* when the question is double. Farther, in the indirect as in the direct double question, the verb is negated by *οὐ*, and every other part of speech by *μή* (§. 94. c.), as

πρὶν δῆλον εἶναι πότερον ἔψωνται Κύρῳ η̄ οὐ (*οὐχ ἔψωνται*) = before it was clear whether they would follow Cyrus or not.

τούτῳ πρόσεχε τὸν νοῦν, εἰ δίκαια λέγω η̄ μή (*μὴ δίκαια*) = attend to this, whether what I say is just or not.

§. 95. *Oratio Obliqua.* a. When the *ipsissima verba* of a speaker are quoted, they are merely an extract from his *oratio recta*, as

The king says (said): "Not even in my own relations do I trust" = *Ο βασιλεὺς λέγει (ἔλεξεν)*: "Οὐδὲ τοῖς ἐμαντοῦ συγγενέσι πέποιθα". ¶

The only peculiarity of direct quotation in Greek is that it *may* be introduced by *ὅτι* = 'that', which is simply omitted in the English translation. Compare the Greek and the English of Math. II. 23. V. 31. XXI. 16. Acts XI. 3. In the second of these passages *ὅτι* introduces even an Imperative, as also in (Plat. Crit. p. 50. c.)

ἴσως ᾧν εἴποιεν ὅτι, "ὦ Σώκρατες μὴ θαύμαξε τὰ λεγόμενα" = perhaps they might say, "O Socrates, wonder not at what is said".

Similarly, the French *que* cannot be translated in 'il dit *que* oui'; 'il dit *que* non' = 'he says yes'; 'he says no'.

When however the *ipsissima verba* of a speaker are not quoted, but a modification of them incorporated with

* The Optative might be used here instead of the Indicative, according to the *oratio obliqua* (§. 95. c.).

the writer's own composition, the *oratio obliqua* arises; and it makes a great difference in Greek whether the *oratio obliqua* depend on an unaugmented or an augmented tense of the Indicative.

b) When the Greek *oratio obliqua* depends on an unaugmented tense of the Indicative, it exactly corresponds to the English *oratio obliqua*, E. G.

Oratio Recta.

'Ο βασιλεὺς λέγει. "Οὐδὲ τοῖς ἐμαντοῦ συγγενέσι πέποιθα" =

The King says: "Not even in my own relations do I trust".

The only change which here appears in the *oratio obliqua*, as compared with the *oratio recta*, is the personal reference of the verb and pronoun; and when there is no opportunity of making this change, the *oratio recta* and the *oratio obliqua* coincide throughout, as

Oratio Recta.

'Ο δοῦλος λέγει. "Ο δεσπότης ἔξηλθεν ἵνα κυνηγήσειεν" =

The servant says: "The master went out that he might hunt."

By reference to the examples of declarative clauses already (§. 1. Obs. 5. §. 46. Obs. a.) given, it appears that the principal verb in the *oratio recta* may be rendered by the infinitive also, and after many *verba declarandi et sentiendi* even by a participle, in the *oratio obliqua*; and that after some English verbs *declarandi et sentiendi* the same threefold construction may be used.

c. But when the Greek *oratio obliqua* depends on an augmented tense of the Indicative, it no longer corresponds with the English *oratio obliqua*: the same change as in the *oratio obliqua* depending on an unaugmented tense is still made in the *personal reference* of both verb and pronoun, but whereas in English the verb

Oratio Obliqua.

'Ο βασιλεὺς λέγει ὅτι οὐδὲ τοῖς ἐμαντοῦ συγγενέσι πέποιθε =

The king says that not even in his own relations does he trust.

Oratio Obliqua.

'Ο δοῦλος λέγει ὅτι ὁ δεσπότης ἔξηλθεν ἵνα κυνηγήσειεν =

The servant says that the master went out that he might hunt.

undergoes a change of *tense*, in Greek it undergoes a change of *mood*. When the *oratio obliqua* takes the form of *ὅτι*, *ὡς* with a finite verb, Optative tenses are substituted for their Indicative namesakes in the *oratio recta*; and this is so marked a peculiarity in Greek that in many grammars no other point is noticed in connection with the Greek *oratio obliqua*.

§. 96. **Optative in the *Oratio Obliqua*.** *a.* All Optative forms are really tenses i. e. time-forms, when used in the *oratio obliqua* depending on an augmented tense* to represent their Indicative namesakes in the *oratio recta*; and of the future Optative, this is the only use ever made. Compare

Oratio Recta.

Ἄρχιδαμος μὲν ἔμοι ἔξενος
ἔστιν =

Archidamus is indeed my guest.

Οὐτε συσκηνοῦν ἦθε λεν
ἔμοι, μετά τε Πελοπίδου
πάντα ἐβονλενετο =
He refused to live in the same
tent with *me*, and *laid* all his
plans in concert with Pelopidas.

Ἡ ὁδὸς ἔσεται πρὸς βασιλέα
μέγαν =
Our march *will be* to the great
king.

Οἱ βάρβαροι ὑπέπεμψαν
τὸν ἀνθρώπον =
The barbarians *sent* the man
privately.

Oratio Obliqua.

Περικλῆς προηγόρευε ὅτι Ἄρ-
χιδαμος μέν οἱ ἔξενος εἶη =
Pericles declared that Archida-
mus *was his guest*.

Κατηγόρει ὁ Λέων ὡς οὐτε
συσκηνοῦν ἐθέλοι εαντῷ,
μετά τε Πελοπίδου πάντα
βονλενοιτο =

Leon's accusation was that he
refused to live in the same tent
with *him*, and *laid* all his *plans*
in concert with Pelopidas.

Κῦρος ἔλεξεν ὅτι η ὁδὸς
ἔσοιτο πρὸς βασιλέα μέ-
γαν =

Cyrus said that *their march*
would be to the great king.

Τότε δὴ καὶ ἐγνώσθη ὅτι οἱ
βάρβαροι ὑπόπεμψαν
τὸν ἀνθρώπον =

Then indeed it was known too
that the barbarians *had sent* the
man *privately*.

* The historic present (§. 33*) is counted as an augmented tense.

Συέννεσις λελοιπε τὰ
ἄκρα =
Syennesis *has left* the heights.

Ἡκεν ἄγγελος λέγων ὅτι Συ-
έννεσις λελοιπώς εἶη* τὰ
ἄκρα =

A messenger came saying that
Syenesis *had left* the heights.

An examination of these examples will shew that the English verb is not always able to mark the *oratio obliqua* by a change of tense†, but that the Greek verb always can by a change of mood.

b. Optative forms represent in the *oratio obliqua* not only the Indicative of the leading clause, but also the Indicative and Subjunctive Group forms of the accessory clauses in the *oratio recta*, as

Oratio Recta.

Ἐὰν σπείσῃ ἔως ἀν ἔλθω-
σιν οὓς ἔπειψα πρὸς βασι-
λέα ἄγγέλους, διαπράξο-
μαι σοι ἀφεθῆναι αὐτονό-
μους τὰς ἐν τῇ Ἀσίᾳ πόλεις
Ἐλληνίδας =

if you agree to a truce till the
messengers I sent to the king
arrive, I shall manage for you
that the Greek cities shall be left
independent.

Oratio Obliqua.

Τισσαφέρνης ὥμοσεν Ἀγησι-
λάῳ, εἰ σπείσαι το ἔως ἔλ-
θοιεν οὓς πέμψειε πρὸς
βασιλέα ἄγγέλους διαπρά-
ξεσθαι † αὐτῷ ἀφεθῆναι
αὐτονόμους τὰς ἐν τῇ Ἀσίᾳ
πόλεις Ἐλληνίδας =

Tissaphernes swore to Agesilaus that, if he *agreed to a truce* till the messengers *he had sent to the king arrived*, *he would manage for him* that the Greek cities should be left independent.

c. When the Optative of the *oratio obliqua* is not formally introduced, and consists of only a single clause,

* The perfect Optative is commonly resolved in this way by the auxiliary *εἴμι*.

† The Scotch dialect has a special *oratio obliqua* form, exemplified in the following passage from Hume's History of England: "The general report is that he *should have said* in confidence to Clifford that, if he was sure that the young prince, who appeared in Flanders, was really son to king Edward, he never would bear arms against him". In this passage *should have said* is a Scotticism for *said*; but the Scotticism is quite classical in German, *er soll gesagt haben*.

†† The Infinitive, not the Optative, here represents the *leading verb* in the *oratio recta*, because the sentence is conditional (§. 97.).

which often happens when a reason is assigned or an inference drawn, not in the writers own name, but in the name of those about whom he is writing, it is apt to escape the notice of the English reader, as in (Thuc. II. 21. 3.)

τὸν Περικλέα . . . ἐκάπιζον, ὅτι στρατηγὸς ὡν οὐκ ἐπεξάγοι = they blamed Pericles because, being general, *he did not lead them on.*

The Optative *ἐπεξάγοι* is due to the *oratio obliqua*; and by using it instead of the Indicative *ἐπεξῆγε**, Thucydides shows that he is not guaranteeing this ground of censure, but merely reporting it out of the mouths of Pericles' accusers.

On the other hand, Optative forms occur in the *oratio obliqua* which are not due to it, but, having been required by the sense in the *oratio recta*, merely reappear in the *oratio obliqua*. Such are the Optative of indefinite frequency (§. 40. Obs. 1. b.), and the Optative of a final clause depending on a past verb (§. 90. a.).

§. 97. Infinitive in the *Oratio Obliqua*. The range of the Infinitive in the *oratio obliqua* is wider than that of the Optative. The Infinitive can be used for the leading verb of the *oratio recta*, including the potential forms, in any *oratio obliqua*; whereas the Optative with *ὅτι*, *ὡς* can be used only in the *oratio obliqua* depending on an augmented tense, and can't be used at all for the potential forms, i. e. cannot represent in the *oratio obliqua* the apodosis of a conditional sentence (§. 96. b. ††). The tenses of the potential Infinitive (§. 45. Obs. 1.)

* Similarly in German, the use of the Indicative implies the certainty of the event in the speaker's view, while the use of the Subjunctive mood implies no such guarantee. Thus, *er sagt, er ist gefallen* = 'he says he has fallen', implies that the reporter believes the saying true; whereas *er sagt, er sei gefallen*, which cannot be translated otherwise into English, leaves the truth or falsehood of the statement an open question.

represent in the *oratio obliqua* their potential namesakes of the Indicative and Optative in the *oratio recta*. Though much seldomer than the Optative, the Infinitive is used in all sorts of accessory clauses also, and is accordingly found introduced by relative pronouns and all sorts of conjunctions, except final ones, as

(Thuc. II. 13.) *ἔτι δὲ καὶ τὰ ἐκ τῶν ἄλλων ἵερῶν προσετίθει χρήματα οὐκ ὀλίγα, οἵς χρήσεσθαι αὐτούς* = and moreover he added the sums of no small amount from the other temples, *which (he said) they would use.*

(Thuc. IV. 98. 4.) *ἔφασαν . . . εἰ μὲν ἐπὶ πλέον δυνηθῆναι τῆς ἐκείνων κρατῆσαι, τοῦτ' αὖν ἔχειν* = they said *if they could* subjugate more completely those people's land, they would retain it.

The use of *δτι* before the Infinitive may be regarded as pleonastic, like the *δτι* which often introduces the *oratio recta* (§. 95. a.); as (Xen. Cyr. I. 6. 18.)

λέγεις σύ, ἔφη, ὡς πάτερ, ὡς ἐμοὶ δοκεῖ, δτι, ὅσπερ οὐδὲ γεωργοῦ ἀργοῦ οὐδὲν ὄφελος, οὗτος οὐδὲ στρατηγοῦ ἀργοῦ οὐδὲν ὄφελος εἰναῖς = you say, quoth he, O father, as seems to me, *that*, as there is no use of an idle farmer, so *there is* no use of an idle general.

Moreover, the Infinitive alone represents the Imperative in the *oratio obliqua*, as

Καὶ αὐτὸς παρήγγειλεν αὐτῷ μηδενὶ εἰπεῖν, ἀλλ' ἀπελθόντα δεῖξαι ἐαυτὸν τῷ ἵερεῖ = and he commanded him *to tell* no man, but *to go* and shew himself to the priest.

Compare this with Luke V. 14. which is an example of *oratio variata*, the Imperative of the *oratio recta* reappearing in the second clause instead of the Infinitive:

(Luke V. 14.) *Καὶ αὐτὸς παρήγγειλεν αὐτῷ μηδενὶ εἰπεῖν, ἀλλ' ἀπελθὼν δεῖξον σεαυτὸν τῷ ἵερεῖ.*

§. 98. *Oratio Recta* invading *Oratio Obliqua*. In the best writers, the Indicative of the *leading* clause in the

oratio recta is, as a rule, changed into its corresponding Optative form in the *oratio obliqua*. The future Indicative very often declines this conversion; and less frequently all the other tenses do the same. Aeschines said of Demosthenes *δεινὰ ποιεῖ*. Demosthenes retorts

Ἐβόα δὲ βάσκανος οὗτος ζτι δεινὰ ποιῶ = this detestable fellow *exclaimed* that *I do* dreadful things.

When the Indicative and Optative forms are interchanged in the *oratio obliqua*, the former denotes the more certain or more important event, as (Xen. An. II. 1. 3.)

Ἐλεγον δέτι Κῦρος μὲν τέθνηκεν, Ἀριαῖος δὲ πεφευγὼς εἴη μετὰ τῶν ἄλλων βαρβάρων = they said that Cyrus *was dead*, and that Ariæus had fled with the other barbarians.

In the *accessory* clauses again, the conversion of the moods is much less common; in the case of the augmented tenses of the Indicative, it is even extremely rare.* Owing to this inconstant use of the special *oratio obliqua* forms, the whole context must often be carefully reviewed in order to decide whether an accessory clause forms part of what the writer is reporting, or is an interposed statement of his own. Generally speaking, if the accessory clause be necessary to complete the

* It thus appears that, as the Greek Subjunctive Mood, including both Groups, answers to only one half of the Latin Subjunctive, and does not completely cover even that (§. 40. Obs. 1.); so the Optative, which comprises all the *oratio obliqua* forms of the finite verb in Greek, answers to only one half of the Latin Subjunctive in the *oratio obliqua*, and covers even that half very inconstantly. It is noteworthy also that, whereas the half of the Latin Subjunctive covered by the Greek Subjunctive Mood, including the Optative Group, consists of the present and imperfect tenses, the half of it covered by the Greek Optative as a group of *oratio obliqua* forms consists of the imperfect and pluperfect tenses.

sense of the leading one, it may be presumed to form part of what is being reported. The special use of Optative forms in the *oratio obliqua* has been a transient phenomenon in the Greek language characteristic of its prime. In Homer, $\delta\tau\iota\iota$ is not once found with the Optative; and in the N. T. there is not a single instance of the Optative due to *oratio obliqua*.

APPENDIX.

- I. English Summary of the Facts and Usages most characteristic of Greek, with References to the preceding Work.
- II. Greek Summary of the Accidence and Syntax, after the manner of the native Greek Grammarians.
- III. A Chapter on Accents.
- IV. English Index to the preceding Work.
- V. Greek Index to the preceding Work.

ENGLISH SUMMARY
OF THE
FACTS AND PRINCIPLES MOST CHARACTERISTIC OF
GREEK, WITH REFERENCES TO THE PRECEDING
WORK.

I. ACCIDENCE.

1. **The Article.** The article claims the particular attention of the student who passes from the study of Latin to that of Greek because, except in certain uses of the feebly demonstrative *is ea id, ó ή τό* has no representative in Latin, and its functions are far more varied than those of the English definite article.

'O ñ́ ró was first a <i>demonstrative adjective</i> ,	§. 3.
then a <i>relative pronoun</i> ,	§. 4.
and a <i>definite article</i>	§. 5.

For its various functions as definite article see . . . §§. 5, 6, 7.

2. **The Verb.** The power of the Greek verb to express the various times and modes of an action does not correspond to its extraordinary wealth of forms.

In respect of moods, the *Optative*, by which the Greek verb seems to be richer than the Latin, is *really subjunctive*; §. 40. obeying, like what is called the Subjunctive, §. 40. the law for the sequence of tenses; §§. 32. 40. a. yet the Greek Subjunctive Mood, including the Optative,

Practically then, and without prejudice to the reservation made (§. 36) in favour of the perfect when *permanent effects* are in question, the Greek Indicative had four tenses represented in the active voice as follows:

The Latin supines are rendered, that in *-um* by the Greek Infinitive or future participle active, . . . §§. 81. b. 46. b. that in *-u* by the Greek Infinitive, active or passive. . . . §. 81. c.

4. Cases. In Greek, the work of the Latin ablative is divided between the genitive and dative cases. §§. 13. Obs. 4. 15. c. 64. The distinction between the subjective and objective Genitive, though not peculiar to Greek, is yet of great importance. . §. 68.

The following formulae of specification expressed by cases of the noun, used either absolutely or with a preposition, will be found useful:

PLACE.

$\piο\check{v}$ = where, $\alpha\check{v}το\check{v}$ = there, $\alpha\lambda\lambda\alpha\chiο\check{v}$ = elsewhere.
Place where, definitely, by the dative alone, more com-

place where, definitely, by the dative alone, more commonly by the dative with *εν*, and by the suffix *-θι* §§.15. a. 50. c. hence the old datives now adverbial

*οἶκοι** = at home, *Μεγαροί* = at Megara.
Places where both is a general name and definite.

*Place where, both in a general way, and definitely, may be expressed by **naṭā** with the accusative, as*

* The dative singular of *oīxos* must have been written *oīxoi* till about B. C. 450—400, when *ω* was introduced into the Attic alphabet. The *postscriptio* of final *ι* too is of course more ancient than its *subscription*, which latter could not have arisen till final *ι* in the dative of parisyllabic nouns slipped out of the pronunciation.

κατὰ γῆν καὶ θάλασσαν = by or over sea and land
κατ’ οἴκους μένειν = to remain in the house.

Place where, in a general way, is sometimes expressed in poetry by the accusative without κατά. §. 16.

Place whence, by the genitive alone in the older poets, by the genitive with ἐξ or ἀπό in prose, and by the suffix -θεν. §. 18. Obs. 1. 50. c.

Place whither, by the accusative alone in poetry, by the accusative with εἰς, πρός, ἐπί in prose; §. 16. by the genitive with ἐπί, §. 83. Obs. 10. a. and by the suffixes -σε -δε -ζε. §. 50. c.

Place whither, in a general way, is also expressed by the genitive alone in certain phrases. §. 18. Obs. 1. b.

Place how far, by the accusative. §. 16.

TIME.

Time when, widely, by the genitive. §. 13. Obs. 2. Time when, approximatively, by the accusative with περὶ, ἀμφὶ.

Time when, precisely, by the dative. §. 15. b.

Time when, as time how long ago, by the accusative with an ordinal numeral and ἦδη. §. 16. a.

Widely χειμῶνος = in the winter-time,

Approximatively περὶ δείλην = about dusk,

Precisely τῇ προτεραίᾳ = on the previous day,

How long ago τρίτην ἦδη ἡμέραν = three days ago.

Time how long, of an action that lasts all the time, by the accusative. §. 16. a.

Time how long since an action did or did not take place, by the genitive with or without διά. §. 13. Obs. 2.

Time how long, in the course of which an action does or does not take place, by the dative with ἐν.

CAUSE.

The cause, including the instrument, in the dative alone or with ἐν, sometimes also in the genitive with διά.

The final cause i. e. the aim, by the genitive with or without γάριν, ἐνεκα, §. 13. Obs. 3. a. b. by the dative with ἐπί, and by the accusative with πρός.

The personal cause i. e. the agent, by the genitive, generally with ὑπό, παρά, or πρός, §§. 13. Obs. 3. c. 79. c. also by the dative alone after the perfect passive and verbals in -τός and -τέος. §. 15. c.

The syntax of the personal cause is greatly extended through personification, as

ὑπὸ λύπης ὑβρίζειν = to be insolent from grief.

QUANTITY.

CIRCUMSTANCE.

By the dative sometimes accompanied by *εν*. Also by the accusative with *κατά*, as §. 15.

καθ' ἡσυχίαν = quietly.

To express the scene whereon some quality is manifested, the descriptive accusative, §§. 16. d. 71. with or without *εἰς*, *πρός*, *κατά*, is to be preferred.

II. SYNTAX.

9. **Government.** The rules here, though not observed with Roman rigour, coincide nearly with those of Latin Syntax, except in that for the ablative is substituted either the genitive or the dative. The Greek *comparative* degree takes the *genitive* of that which with anything is compared. §.13. Obs.4. The syntax of verbals in *-τέος* is important. §. 80. Among verbs governing one case, the chief deviation from Latin usage is in those denoting the operation of the senses;

ΕΠΙΤΟΜΗ ΕΛΛΗΝΙΚΗ

πρὸς ὡφέλειαν τῶν διδασκάλων, τῶν τὰ τῆς Ἑλλάδος γλώσσης Ἑλληνιστὶ παραδιδόναι προθυμούμενων.

Α. ΟΡΟΙ ΓΡΑΜΜΑΤΙΚΟΙ.

α. *Λόγος* ὄνομάζεται ἄθροισις λέξεων ἀκέραιον δηλοῦσα διάνοιαν, οἷον 'οἱ Ἑλληνες εἰσέβαλον εἰς τὴν Ἀσίαν.' Τὰ δὲ τοῦ λόγου στοιχεῖα λέγονται ὡδε, ἄρθρον, ὄνομα, ἐπίθετον, ἀντωνυμία, ἄρνημα, ἐπίφρενημα, πρόθεσις, σύνδεσμος, ἐπιφώνημα.

β. Τοῦ ὄνόματος αἱ πτώσεις ὄνομάζονται ὄρθὴ ἢ ὄνομαστικὴ, γενικὴ, δοτικὴ, αἰτιατικὴ, ολητικὴ· τὰ δὲ τοῖα γένη ἀρσενικὸν, θηλυκὸν, οὐδέτερον. Τριπλοῦς δ' ἐστὶν ὡσαύτως ὁ ἀριθμὸς, δηλαδὴ ἐνικὸς, δυϊκὸς, πληθυντικός. Τοῦ ἐπιθέτον οἱ βαθμοὶ λέγονται θετικὸς, συγκριτικὸς, ὑπερθετικός.

γ. Τρεῖς ἔχει διαθέσεις τὸ ἄρνημα, ἐνεργητικὴν, μέσην, παθητικὴν, καὶ ἐν ἐκάστῃ διαθέσει πέντε διακρίνονται ἔγκλίσεις, ὡντέσσαρες μὲν παρεμφατικαὶ, ὁριστικὴ, ὑποτακτικὴ, εὐκτικὴ, προστακτικὴ, μία δὲ ἀπαρέμφατος· μέρος δὲ τοῦ ἄρνηματος ἐστι καὶ ἡ μετοχὴ. Οἱ χρόνοι τοῦ ἄρνηματος λέγονται ὡδε· ἐνεστώς, παρατακτικὸς, μέλλων, ἀόριστος, παρακείμενος, ὑπερσυντελικός. Ἰστέον δ' ὡς οἱ μὲν ἀναύξητοι χρόνοι ἀρκτικοὶ, οἱ δὲ δι' αὐξήσεως ἐσχημάτισμένοι παραχημένοι ὄνομάζονται.

δ. 'Τποκείμενον λέγεται τὸ περὶ οὗ ὁ λόγος, καὶ οατηγορούμενον, ἢ οατηγόρημα τὸ οατὰ τοῦ ὑποκειμένου λεγόμενον. Διὰ μόνου τοῦ ἄρνηματος, καὶ ταῦτα γε παρεμφατικοῦ σχήματος, οατηγορεῖται τι· ὅθεν, ὅπου ἂν παρῇ ἄρνημα παρεμφατικὸν, πάρεστι καὶ λόγος, καὶ ἀνεὺ ἄρνηματος παρεμφατικοῦ, εἴτε ἐκφερομένου, εἴτε ἐννοουμένου, λόγος οὐχ ἴσταται.

Β. ΠΡΟΣΔΙΟΡΙΣΜΟΙ

ἐν οἷς, ἐμπρόθετοι ἢ ἀπρόθετοι, ἐπιφρόηματικῶς τίθενται αἱ τοῦ ὀνόματος πτώσεις.

α. 'Ο Τόπος, ὅπον ἵσταται ἢ κινεῖται τι, ἐκφέρεται διὰ δοτικῆς, συνήθως μὲν ἐμπροθέτου, οἷον 'ἐν τῇ Ἀκαδημίᾳ', ἐνίστε δὲ ἀπροθέτου, μάλιστά γ' ἐπὶ τῶν τῆς Ἀττικῆς δήμων, οἷον 'Μαραθῶνι'. 'Ο Τόπος, ὅπόσε κινεῖται τι, ἐκφέρεται δι' αἰτιατικῆς, ἐν μὲν τῷ πεξῷ λόγῳ ἐμπροθέτου, οἷον 'διέβησαν εἰς Σικελίαν', 'ἔφυγον πρὸς τὴν γῆν', 'εἰμ' ἐπὶ ναῦν'. παρὰ δὲ ποιηταῖς ἐμπροθέτου τε καὶ ἀπροθέτου, οἷον (Σοφ.) 'δόμονς στείχῳ ἐμούς.' 'Ο Τόπος, ὅποθεν κινεῖται τι, ἐκφέρεται διὰ γενικῆς, ἐμπροθέτου μὲν ἐν τῷ πεξῷ λόγῳ, οἷον 'ἐκ Λακεδαιμονος' ἢ 'ἀπὸ Συρακουσῶν φεύγειν'. ἐμπροθέτου δέ τε καὶ ἀπροθέτου παρὰ τοῖς ἀρχατζούσι ποιηταῖς, οἷον (Σοφ.) 'εἰ μὴ τόνδ' ἄγοιντο νήσον τὴσδε.' 'Ο Τόπος, δι' οὗ κινεῖται τι, ἐκφέρεται διὰ γενικῆς, συνήθως μὲν ἐμπροθέτου, οἷον 'δι' οὐρανοῦ πορεύεται', ἐνίστε δὲ, ἄλλὰ μόνον παρὰ τοῖς ἀρχαιοτέροις ποιηταῖς, καὶ ἀπροθέτου, οἷον (Ομ.) 'ἔρχονται πεδίοι.'

β. 'Ο Χρόνος, ὅπότε γίνεται τι, μάλιστά γ' ἐν τοιαισδε χρόνου διαιρέσειν ἐμφαινόμενος, ἃς ἂν οἱ ἀνθρώποι ξυνθέμενοι ποιεῖν ποιῶσι, ἐκφέρεται δοτικῇ ἀπροθέτῳ, οἷον 'τρίτη ὥρᾳ', 'μηνὸς ἑκτῃ φθίνοντος'. ἐπὶ δὲ τῶν ἥδη γεγενημένων ἐκφέρεται καὶ αἰτιατικῇ ἀπροθέτῳ, τῇ τὰ ἀπὸ τοῦ περὶ οὐ διότος συμβάντος μέχρι τοῦ νῦν παρελθόντα χρονικὰ διαστήματα διὰ τακτικοῦ ἀριθμητικοῦ ὀνόματος δηλουόση, ἔσθ' ὅτε τοῦ ἥδη παρεντιθεμένου, οἷον 'τρίτην ἥδη ἡμέραν ἀπέθανεν ὁ πατήρ'. Τὸ δὲ Χρόνον διάστημα, ἐνῷ γίνεται τι, ἐκφέρεται γενικῇ, εἴτε ἀπροθέτῳ, ἄλλως τε καὶ ἐπὶ τῶν φύσει ὑπαρχουσῶν χρόνου διαιρέσεων, οἷον 'οἱ λαγῷ τῆς νυκτὸς νέμονται', εἴτε ἐμπροθέτῳ, προτιθεμένης ἐπὶ μὲν κυρίων ὄνομάτων τῆς ἐπὶ προθέσεως, οἷον 'ἐπὶ Θησέως', 'ἐπὶ Κύρου βασιλεύοντος', τὰ δ' ἄλλα προτιθεμένης τῆς διὰ προθέσεως, οἷον 'διὰ πολλοῦ αὐτοὺς οὐχ ἐώρακα.' 'Ωσαύτως ἐκφέρεται τὸ Χρόνον διάστημα, ἐνῷ γίγνεται τι, διὰ δοτικῆς μετὰ τῆς ἐν προθέσεως, οἷον 'ἐν ἐβδομήνοντα ἔτεσιν οὐκ

ἄν εἰς λάθοι πονηρὸς ὡν'. Ὁ Χρόνος, ὃ πότε ὡς ἔγγει-
στα γίνεται τι, ἐκφέρεται δι' αἰτιατικῆς μετὰ τῆς περὶ ἡ
ἀμφὶ προθέσεως, οἷον 'περὶ ἔτη μάλιστα πέντε καὶ ἔξη-
κοντα', 'ἀμφὶ μέσας περιγένεται'. Ὁ Χρόνος, ὃ ποσάκις
γίνεται τι, ἐκφέρεται διὰ γενικῆς ἀπροθέτου, οἷον 'οὐ δηλί-
της δραχμὴν ἐλάμβανε τῆς ἡμέρας'.

γ. Τὸ Ποσὸν τόπου, χρόνου κ.τ.λ. ἐκφέρεται δι' αἰτιατικῆς
ἀπροθέτου, οἷον 'ἀπέχει ἡ Πλάταια τῶν Θηβῶν σταδίους
έβδομήκοντα', 'πολὺν χρόνον ἐμάχοντο'. * ἡ καὶ μετὰ
τῶν ἀνὰ, κατὰ, παρὰ προθέσεων, οἷον 'ἀνὰ πᾶσαν τὴν
γῆν', 'κατὰ ἡ παρὰ πάντα τὸν πόλεμον.' Άηλον δ' οὖν
ώς τὸ τοῦ χρόνου πλῆθος γενικῆς τε καὶ αἰτιατικῆς ἐκφέρεται.
Ἐνεστι δ' ἐν ἐκατέρᾳ διαφορὰ ἥδε. Διὰ μὲν τῆς γενικῆς ὑπαι-
νίσσεται σημεῖόν τι χρόνου ἐν τῷ πλήθει ὑπάρχον, καθ' ὃ
ἐγένετο ἡ πρᾶξις, διὰ δὲ τῆς αἰτιατικῆς ἀπας ὁ χρόνος
καθ' ὃν διήρκεσε ἡ πρᾶξις δηλοῦται. Τέλος, τὸ Ποσὸν ἐπὶ
ἀνταλλαγῶν, δηλαδὴ τὸ τιμὴν δηλοῦν, κατὰ γενικὴν τίθεται,
οἷον 'τῶν πόνων πωλοῦσιν ἡμῖν πάντα τάγαθα' οἱ Θεοί.'

δ. Τὸ Αἴτιον, ὃ ποιονδήποτε ἄν ἡ, ἔξαιρουμένου δὴ τοῦ τελι-
κοῦ αἴτιον, παρὰ τοῖς ποιηταῖς διὰ γενικῆς ἀπροθέτου, συνή-
θως δὲ διὰ γενικῆς μετὰ τῆς ὑπὸ προθέσεως ἐκφέρεται, οἷον
'ἀδικεῖσθαι ὑπό τινος'. κείσθω δὲ τοῦτο ποιητικὸν αἴ-
τίον παράδειγμα. Τὸ προτρεπτικὸν ἡ ἀναγκαστικὸν
αἴτιον καὶ διὰ δοτικῆς ἐκφέρεται ἀπροθέτου, οἷον 'φόβῳ
πράττειν τι'. ** πρὸς δὲ δι' αἰτιατικῆς μετὰ τῆς διὰ προ-
θέσεως, οἷον 'λέγονται Ἀθηναῖοι διὰ Περικλέα βελτίους
γεγονέναι.' Τριπλῆ ἐκφέρεται τὸ τελικὸν αἴτιον, δηλαδὴ διὰ
γενικῆς μετὰ τοῦ χάριν ἡ ἐνεκα προθετικῶς ἐκλαμβανο-
μένων, οἷον 'κολακεύουσιν ἐνεκα ἀργυρίου'. ἡ διὰ δο-

* Πολλὰ τῶν τὸ Ποσὸν δηλούντων ἐπιδρημάτων οὐκ ἄλλο
τί ἔστιν ἡ ἐπίθετα οὐδέτερα κατ' αἰτιατικὴν, οἷον ὀλίγον,
πολύ, μέγα κ.τ.λ.

** 'Εσθ' ὅτε καὶ τὸ ποιητικὸν αἴτιον διὰ δοτικῆς ἐκφέ-
ρεται ἀπροθέτου, τὰ μὲν πλείω ἐπὶ ἀντωνυμιῶν, ἄλλως τε καὶ
τῶν παθητικοῖς δήμαισι χρόνον παρακειμένον ἡ ὑπερσυντελι-
κοῦ συντασσομένων, οἷον 'ταῦτα λέλεκται μοι', πάντοτε δὲ
ἐπὶ τῶν εἰς -τέος ληγόντων δηματικῶν, οἷον 'ἐπιθυμητέον
ἔστι τοῖς αὐθρωποις τῆς ἀρετῆς'.

τικῆς μετὰ τῆς ἐπὶ προθέσεως, οἶον ‘ἐπὶ γέλωτι’· ἢ δι’ αἰτιατικῆς μετὰ τῆς πρὸς προθέσεως, οἶον ‘παντοδαπὰ εὐρημένα ταῖς πόλεσι πρὸς φυλακὴν καὶ σωτηρίαν’.

ε. ‘Ο Τρόπος, καθ’ ὃν γίνεται τι, διὰ δοτικῆς ἐκφέρεται, ἢ ἀπροθέτου, οἶον ‘βίᾳ εἰς οἰκίαν παριέναι’, ἢ καὶ τῆς ἐν προθέσεως προσλαμβανομένης, οἶον ‘ἐν σιωπῇ ἐκάθηντο’· πρὸς δὲ καὶ δι’ αἰτιατικῆς μετὰ τῆς κατὰ προθέσεως, οἶον (Δημ.) ‘συμβαίνει τῷ μὲν (Φιλίππῳ), ἐφ’ ἄλλῳ ἔλθῃ, ταῦτ’ ἔχειν κατὰ πολλὴν ἡ συχίαν’.

ζ. Τὸ Οργανον, δι’ οὗ γίνεται τι, διὰ δοτικῆς ἐκφέρεται, ἢ ἀπροθέτου, οἶον ‘οὐδεὶς ἔπαινον ἡδοναὶς ἐκτήσατο’, ἢ μετὰ τῆς ἐν προθέσεως, οἶον ‘ἐν τόξοις διαγωνίζεσθαι’· πρὸς δὲ ἐκφέρεται διὰ γενικῆς μετὰ τῆς διὰ προθέσεως, οἶον ‘δι’ ὀφθαλμῶν ὄραν’· Ἰστέον ὅτι τὸ ποσὸν, ὡς οργανον θεωρούμενον, μάλιστά γε τὸ διαφορᾶς μέτρον δηλοῦν, κατὰ δοτικὴν τίθεται ἀπρόθετον, οἶον ‘ἐνιαυτῷ πρεσβύτερος’.

η. Τὸ κατά τι δι’ αἰτιατικῆς ἐκφέρεται, ἀπροθέτου μὲν τὰ πολλὰ, οἶον ‘δεινοὶ μάχην’, ‘ἀλγῶ τοὺς πόδας’· ἐνίστε δὲ καὶ μετὰ τῶν κατὰ, πρὸς, εἰς προθέσεων, οἶον ‘ξανθὸς κατὰ τὴν κόμην’, ‘σοφὸς πρός τι’, ‘ἐνδοξος εἰς τὰ πολεμικά’· Ἡ δὲ δοτικὴ, τὴν κατά τι σχέσιν ὡς οργανον δηλοῦσα, τίθεται ἀπροθέτως, οἶον ‘ἄμαχοι καὶ πλήθει, καὶ πλούτῳ, καὶ τέχνῃ, καὶ φώμῃ’.

Γ. ΚΑΝΟΝΕΣ ΣΤΝΤΑΞΕΩΣ, ΟΙ ΚΤΡΙΩΤΕΡΟΙ.

α. ‘Ονόματα, τὰ μὲν πρὸς τὸ αὐτὸ πρόσωπον ἢ πρᾶγμα ἀναφερόμενα, ὁμοιοπτώτως τίθενται, οἶον ‘Δημοσθένης ὁ φήτωρ’· τοῦτο δὲ ὄνομάτων πρόσθεσις καλεῖται. Τὰ δὲ πρὸς διάφορα ἄλλῳ ὄποιασσεται ἐπὶ γενικῆς, οἶον ‘ὁ τοῦ δένδρου οαρπός’.

β. Τὸ Ἐπίθετον καὶ ἡ Μετοχὴ συμφωνοῦσι τοῖς εἰς ἄλλαφέρονται ὄνόμασι κατὰ γένος, ἀριθμὸν, πτῶσιν, οἶον ‘χρηστὸς ἀνήρ’, ‘οἱ παῖδες οἱ φοιτῶντες εἰς τὰ διδασκαλεῖα’. Πολλῶν τῶν ὄνομάτων ὄντων, τίθεται τὸ ἐπίθετον ἢ ἡ μετοχὴ πληθυντικῶς. Ἐπὶ μὲν ἀψύχων, εἴτε ὁμογενῶν εἴτε ἑτερογενῶν, κατ’ οὐδέτερον γένος, οἶον ‘ταραχαὶ καὶ στάσεις ὀλέθρια ταῖς πόλεσι’, ‘λίθοι τε καὶ πλίνθοι καὶ ξύλα

καὶ πέραμος, ἀτάκτως ἐφέμιμένα, οὐδὲν πρήσμα ἔστιν. Ἐπὶ δὲ ἐμψύχων, τῶν μὲν ὄρογενῶν, πατὰ τὸ τοῖς ὄντας ποινὸν γένος, τῶν δὲ ἐτερογενῶν, πατὰ τὸ ἐπικρατεύοντος. ἔστι δὲ ἐπικρατεύοντος τὸ μὲν ἀρσενικὸν τοῦ θηλυκοῦ, τὸ δὲ θηλυκὸν τοῦ σύντετρον, π. χ. ‘ἡ γυνὴ παῖς ὁ ἀνὴρ ἀγαθοί’ λέγονται, καὶ σύχλι ‘ἀγαθαί’. Ἰστέον δ’ ὅτι, ἥτις κατ’ ὄνομαστικὴν ἐπίθετόν τι ὑνόματι παρατίθεται ἐνάρθρῳ, καίτοι τοῦ συνδετικοῦ ἐλλείποντος, λόγος αὐτοτελῆς ἀπαρτίζεται. οὗτω δὴ τὸ ‘θηλυτὸς ὁ ἄνθρωπος’ δύναται τὸ ‘θηλυτός ἔστιν ὁ ἄνθρωπος’, καὶ τὸ ‘ὁ ἄνθρωπος θηλυτός’ δύναται τὸ ‘ὁ ἄνθρωπος θηλυτός ἔστιν’. Μετοχῆς δὲ πατὰ γενικὴν ὄνόματι παρατιθεμένης, προσδιορισθὸν δὴ τότε ἡ συμφωνία αὐτῇ, χρονικὸν ἥτις ποθετικὸν ἥτις ἄλλον οἰστιθεν, ἐπιδραματικῶς πως ἐκδηλοῖ, οἷον ‘ὅρθρον γενομένῳ ἡφικέντα’· ‘ὅρῶ, τοῦ χωρίου χαλεποῦ ὄντες, τοὺς τριηράρχους ἀποκνοῦντας’. Αὕτη δὲ ἡ πτῶσις ἥτις σύνταξις ἀπόλυτος παρὰ τοῖς νεωτέροις παλείται.

γ. Παρεμφατικοῦ δήματος τὸ ὑποκείμενον τίθενται κατ’ ὄνομαστικὴν, καὶ ταύτῃ συμφωνεῖ τὸ δῆμα πατ’ ἀριθμὸν τε καὶ πρόσωπον, οἷον ‘Κῦρος τέθυνε’. Εἰώθασι μέντοι οἱ Ἀττικοὶ πληθυντικὴν ὄνομαστικὴν οὐδετέραν, ἐὰν ἐψυχαμάλιστα δηλοῖ, δήματι ἐνικῷ παρατιθέναι, οἷον ‘ἴαρος θάλλει τὰ δόδα’, *καὶ τοῦτο δή ἔστι τὸ λεγόμενον σχῆμα Ἀττικόν. Εὐφαίνεται δὲ καὶ τούναντίον. ὑποκείμενον δηλαδὴ περιληπτικὸν καθ’ ἐνικὸν ἀριθμὸν ἐφέλκεται τὸ δῆμα πατὰ πληθυντικὸν, ἐξόχως δὴ ὅταν διάκρισις τῶν δὲ τῇ πληθύη ὑποκειμένων νοῆται, καὶ τὸ δῆμα καθ’ ἐκάστου τούτων πατηγορηται, οἷον (Ὀμ.) ‘ώς φάσαν ἡ πληθύς’· ἄλλως δὲ, τοῦ ὑποκειμένου ὡς ἀπλῆς ἐνάρδος νοούμενου, παρατίθεται καὶ τὸ δῆμα καθ’ ἐνικὸν ἀριθμὸν, οἷον ‘ἀναρίθμητός ἔστιν ἡ πληθύς’. Ἐν τούτοις τε καὶ τοῖς ἐξῆς παραδείγμασι ‘ἀνὴρ σὺν παιδὶ πάρεισι’, ‘ἀνὴρ καὶ γυνὴ πάρεισι’, τὸ

* Συνήθως μὲν παραλείπονται αἱ ὑποκείμενον δηλοῦσαι ἀντωνυμίαι, οἷον ‘ἀλγῷ τὴν κεφαλήν’· τὸ γὰρ πρόσωπον διὰ τῆς παταλήξεως αὐτοῦ τοῦ δήματος δηλοῦται. Εμφάσεως δὲ χάριν ἐκφέρονται, οἷον ‘οὐ σὺ, ἀλλ’ ἔγωγ’ ἐτόλμησα τὸν ποταμὸν διαβῆναι πρῶτος’.

κατὰ σύνεσιν ἴσχυει σχῆμα. Πλειόνων δ' ὕντων τῶν τοῦ ἔρματος ὑποκειμένων καὶ ἐπεροκροσώπων, τίθεται τὸ φῆμα κατὰ τὸ ἐπικρατέστερον, οὐκάδ' αὐτὸν τὸ πρῶτον τὸ δεύτερον πρόσωπον, καὶ τοῦτο τὸ ερέτον, οἷον 'Ἐνμφωνοῦμεν ἐγώ τε καὶ ὑμεῖς', 'οὐ σὺ μόνος, οὐδὲ οἱ σοὶ φίλοι πρῶτοι καὶ πρῶτον ποιήτην τὴν δύξαν περὶ θεῶν ἔσχετε'. Ἀλλὰ καὶ κατὰ τὸ προσεγέστερον, ὄποιον δήποτε ἀριθμοῦ τε καὶ πρόσωπου ἄντα, τίθεται τὸ φῆμα, οἷον 'ἐγὼ λέγω καὶ Σενύθης τὰ επύντα', 'ἐνίκων οὗτοι οἱ ἔνοι, καὶ ὑμεῖς μετ' ἐκείνων'.

δ. Τῆς ἀπαρεμφάτου τὸ ὑποκείμενον τίθεται κατ' αἰτιατικὴν, οἷον 'πάντας τοὺς ἀνθρώπους ἀμαρτάνειν ἀληθές'. Ἐὰν ὅμως τὸ αὐτὸν ἔχη ὑποκείμενον ἡ ἀπαρεμφάτος καὶ παρεμφατικόν τι φῆμα ἔξι αρτάται ἡ ἀπαρεμφάτος, ἡ παραλείπεται τὸ ὑποκείμενον τοῦτο, τὸ ἀμφοτέροις κοινὸν, οἷον 'όμολογῷ ἡμαρτηκέναι', ἡ τίθεται κατ' ὄνομαστικὴν, οἷον 'φησὶ αὐτὸς τὴν ἐπιστολὴν γεγραφέναι.'

ε. 'Ἡ αὐναφορικὴ λεγομένη ἀντωνυμία συμφωνεῖ τῷ ἑαυτῆς ἡγουμένῳ κατὰ γένος καὶ ἀριθμὸν καὶ πρόσωπον, οἷον 'Ζεὺς ὃς ἐφορᾷ πάντα'. Τῷ συντακτικῷ δὲ σχήματι, ὃ καλεῖται ἐλξίς η ἐφελξίς, ἐλκεται ἡ ἀντωνυμία εἰς τὴν πτῶσιν τοῦ ἡγουμένου, καὶ δὴ τὸ 'χρῶμαι τοῖς ἀγαθοῖς ἢ ἔχω' πράκτεται ὡδε, 'χρῶμαι τοῖς ἀγαθοῖς οἷς ἔχω', ἡ καὶ, μεταθέσει τοῦ ἡγουμένου, 'χρῶμαι οἷς ἔχω ἀγαθοῖς'. Ἀντιστρόφως δ' ἔσθ' ὅτε καὶ ἡ ἀντωνυμία ἐλκει τὸ μετετεθειμένον ἡγούμενον, καὶ δὴ τὸ 'οὗτος ἐστὶν ὁ ἀνὴρ ὃν εἶδες' μεταβάλλεται εἰς τὸ 'οὗτος ἐστὶν ὃν εἶδες ἀνδρα'.

ζ. Γενικὴ συντάσσονται ἐπίθετα καὶ φῆματα, τὰ πληρώσεως, μεθέξεως, ἐμπειρίας, ἐπιμελείας, μνήμης, ἐπιτυχίας, φειδοῦς σημαντικὰ, καὶ τὰ τούτοις ἐναντία· πρὸς δὲ ἐκ τῶν ἐπιθέτων τὰ φηματικὰ εἰς-ι κόσ λήγοντα, τὰ ἐκ τοῦ αστερητικοῦ σύνθετα, καὶ τὰ παραφετικὰ, τὰ συγκριτικὰ δηλαδὴ καὶ ὑπερθετικὰ, καὶ τούτοις ἀνάλογα, οἷον δεύτερος, περιττούς· ἐκ δὲ τῶν φημάτων τὰ ἀρχικὰ καὶ ὑπαρχικὰ, τὰ ἐνάρξεως ἡ λήξεως αημαντικὰ, καὶ τὰ τῶν αἰσθήσεων, πλὴν τοῦ ὄρῳ.

η. Δοτικὴ συντάσσονται ἐπίθετα καὶ φῆματα, τὰ ὑμοιότητος, ἀναλογίας, προσεγγίσεως, μίξεως σημαντικὰ,

τά τε φιλικὴν ἡ ἔχθρικὴν πρός τινα διάθεσιν δηλοῦντα, ἀπερ, συντομίας χάριν, περιποιητικὰ καὶ ἀντιπερι- ποιητικὰ ὑπὸ τῶν γραμματικῶν καλοῦνται. πρὸς δὲ τὰς ἀπρόσωπα λεγόμενα δήματα.

η. Αἰτιατικὴ συντάσσονται τὰ ἰδίως ἡ ἀμέσως μεταβατικὰ δήματα. Μεταβατικὰ καλοῦνται τὰ δήματα τὰ τοιάνδε ἐνέργειαν δηλοῦντα, ἥτις ἐξ ἀνάγκης εἰς πρόσωπον ἡ πρᾶγμα διάφορον τοῦ ὑποκειμένου, τὸ παρὰ γραμματικοῖς ἀντι- κείμενον λεγόμενον, μεταβαίνει. Π. Χ. διὰ τοῦ τρέχειν δηλοῦνται μὲν ἐνέργεια, ἀλλ' ἐπεὶ αὐτοτελές τι ἐκφαίνει, οὐδὲ πρὸς συμπλήρωσιν τῆς ἑαυτοῦ ἐννοίας ἀντικείμενον ἐπιδέχεται, μεταβατικὸν οὐ λέγεται. τὰ δὲ σφάττειν, ἐπι- θυμεῖν, ἐπεσθαί, μεταβατικὰ λέγονται δήματα, ἀτε ἐπ' ἄλλο τι μεταβανούσης τῆς δι' αὐτῶν δηλουμένης ἐνερ- γείας, οἷον ἐν τοῖς 'σφάττω τὸν βοῦν', 'ἐπιθυμῶ σοφίας', 'δεῖ ἐπεσθαί τῷ ἡγεμόνι.' Διαιρετέα δὲ ἐν τούτοις τὰ ἰδίως ἡ ἀμέσως μεταβατικὰ τῶν ἐμμέσων μεταβατικῶν δημάτων. ἔνεστι γὰρ διαφορὰ ἥδε. Τὰ τῇ αἰτιατικῇ συντάσσόμενα δήματα, φύσει δραστικάτερα, ἐμφαίνονται καὶ μεταβολήν τινα τοῦ ἀντικειμένου, διὸ καὶ ἰδίως ἡ ἀμέσως μετα- βατικὰ καλοῦνται. τὰ δὲ γενικὴ ἡ δοτικὴ συντάσσόμενα, μόνην τὴν τοῦ ὑποκειμένου διάθεσιν ἐκδηλοῦντα, τοῦ δὲ ἀν- τικειμένου οὐδεμίαν μεταβολὴν, ἐμμέσως μεταβατικὰ ὑπὸ τῶν γραμματικῶν καλοῦνται. 'Ἐνια δημάτων εἰδη δι- πλοῦ δέονται ἀντικειμένουν, ὡν τὸ κύριον, πρὸς ὅ ἰδίᾳ ἡ τοῦ δηματος ἐνέργεια φέρεται, κατ' αἰτιατικὴν τιθέμενον, ἀμε- σον λέγεται, τὸ δὲ κατ' ἄλλην τινὰ τῶν πλαγίων, ἡ καὶ καθ' ἐτέραν αἰτιατικὴν, ἐμμεσον. Π. Χ. ἐν τῷ 'Χριστιανοῦ ἀληθινοῦ ἐστι τοῖς πεινῶσι ἀρτον διδόναι', τὸ ἄρτον, τὸ μεταβολήν τινα, θέσεως δηλονότι, ὑφιστάμενον, καὶ κατ' αἰτιατικὴν τιθέμενον ἀντικείμενον, ἀμεσον λέγεται, τὸ δὲ πεινῶσι, ἐμμεσον. Δίπτωτα δὲ ταῦτα οἱ γραμματικοὶ καλυῦντες διακρίνονται τῶν λοιπῶν, ἀμονόπτωτα ἐκεῖνοι ὠνόμασαν.

θ. Αἰτιατικὴ καὶ γενικὴ συντάσσονται τὰ πληρωτικὰ καὶ κενωτικὰ, οἷον 'ζεύγη καὶ ὑποζύγια σίτου γεμίσαντες', 'οἷμαι ταύτης ἀπαλλάξειν σὲ τῆς ὁφθαλμίας'. τὰ μνημο-

νευτικὰ, οἶον ‘ἀναμιμνήσκειν τινά τινος’· τὰ ἀνταλλακτικὰ, οἶον ‘πλείστον τιμᾶν τέ’· τὰ δεόμενα τοῦ προσδιορισμοῦ τῆς αἰτίας δι’ ἥν τι γίνεται, οἶον ‘ἐπαινεῖν τινα τῆς ἀρετῆς.’

- ι. *Αἰτιατικὴ καὶ δοτικὴ συντάσσονται τὰ δύσεως, διηγήσεως, ἐναντιότητος σημαντικὰ, οἶον ‘τὰ ἀγαθὰ διδόναι τοῖς δικαίοις’, ‘τὸ ἀληθὲς ἀγγέλλειν τινί’, ‘ἴσους ίσοις πολεμίοις ἀντιτιθέναι.’*
- κ. *Διπλῆ αἰτιατικὴ συντάσσονται τὰ ἴκετευτικὰ, τὰ παραδευτικὰ, τὰ ἐνδύσεως ἢ ἐκδύσεως σημαντικὰ, τὰ τὴν ἔννοιαν ἔχοντα τοῦ εὗ ἢ οὐκῶς λέγειν ἢ ποιεῖν.*
- λ. *Τὰ εἰς -τέος λήγοντα δηματικὰ διττὴν ἔχουσι τὴν σύνταξιν. Τὰ μὲν ἐξ ἴδιως μεταβατικῶν δημάτων καταγόμενα ἢ συμφωνοῦσι, ἐπιθέτων καὶ μετοχῶν δίκην, τῷ τοῦ λόγου ὑποκειμένῳ, οἶον ‘διαφυλακτέα ἢ τάξις’, ἢ τίθενται κατ’ οὐδέτερον γένος, ἐνικῶς τε καὶ πληθυντικῶς, μεταβαλλομένης τῆς πρότερον ὀνομαστικῆς εἰς αἰτιατικὴν, οἶον ‘διαφυλακτέον’ ἢ καὶ ‘διαφυλακτέα τὴν τάξιν.’ Τὰ δὲ ἐξ ἐμμέσως μεταβατικῶν δημάτων παραγόμενα, κατὰ μόνον τὸν δεύτερον τρόπον συντάσσονται. Ιστέον ὅμως ὅτι τῶν δηματικῶν τούτων τὸ ἀντικείμενον κατὰ τὴν πτῶσιν τίθεται, τὴν τῷ δηματικοὶ οἰκείαν ἐξ οὐ παράγεται ἔκαστον, οἶον ‘ἀντιληπτέον τῶν πραγμάτων’, ‘ἐπιχειρητέον τῷ ἔργῳ.’*

Δ. ΠΕΡΙ ΑΠΟΦΑΤΙΚΩΝ ΜΟΡΙΩΝ.

- α. *Πᾶσαι μὲν αἱ τοῦ δήματος ἐγκλίσεις, πλὴν τῆς ἀπαρεμφάτου, κατηγοροῦσί τι κατά τινος, προδηλότατον δ’ ὡς ἐκάστη κατὰ τὴν οἰκείαν αὐτῆς φύσιν καὶ δύναμιν· καὶ τὰ ἀποφατικὰ μόρια, τῇ τῶν ἐγκλίσεων δυνάμει ἐλκόμενα, ἄλλη ἄλλο πρέπει. Καὶ δὴ καὶ τῇ ὁριστικῇ, ὡς θετικόν τι καὶ βέβαιον παριστώσῃ, πρέπει τὸ ἀποφατικὸν οὐ, οἶον ‘οὐκ ἔστι ταῦτα’· ταῖς δὲ λοιπαῖς τῶν ἐγκλίσεων, αἱ οὐκ ὄντως τι ὅν παριστᾶσι, ἄλλα τι ὑποτιθέμενον, ἢ προστασσόμενον, ἢ εὐκτὸν, πρέπει τὸ μή, οἶον ‘μὴ ὑβρίσῃς’, ‘μὴ γένοιτο’, ‘ὦ τέννα μὴ καταφρονεῖτε τοῦ πένητος’.*
- β. *Ἡ ἐνιακὸν παράβασις τοῦ κανόνος τούτου, οὐκ οὖσα ἄλλα*

φαινομένη, κυρεῖ μάλιστα τὸ φῆμέν. Ἐν τῷ Ομηρικῷ 'οὐπω τοίους ἰδεις ἀνέρας, οὐδὲ* ἕδε μαῖ', τὰ τοῦ μέλλοντος τῆς ὁριστικῆς ἐπέχουσα ἡ ὑποτακτική, ἔντας τι ὅν καὶ οὐχ ὑποτιθέμενον ἔξηγει. Τὸ 'οὐκ ἀν γένοι το ταῦτα', καὶ παρόμοιοι λόγοι, οὐχ ὑποτιθέμενόν τι δηλοῦντες, ἀλλ' εὐγενείας ἡ γάρτος ἔνεκα τὸ τοῦ θετικοῦ βαρὺ καὶ αὐστηρὸν μετριάζοντες, τὰ ίσα ἔχοντες λάγῳ θετικῷ· ἔστιν ἄρ' ὁ φῆμεὶς λόγος οὐκ ἄλλος ἡ ὁ 'οὐκ ἔστι γενέσθαι ταῦτα'. Ἐν τε διηγήσει τέθεται οὐ μετ' εὐητικῆς, ἥτικα ἡ ἔγκλισις αὐτῇ τὰ τῆς ὁριστικῆς ἐκπληροῖ, οἷον 'λέγων ὅτι οὐπω δὴ πολλοῦ χρόνου ἡδίονι οὖν ἐπιτύχοι'· αὐτὸς γὰρ ὁ λέγων ἐπέτυχον εἰπεν ἄν, κατ' ὁριστικήν. Ἐστι δ' ὅτε καὶ ἡ ὁριστικὴ ἀποβάλλοντα τὴν αἰνεῖσαν αὐτῆς θετικὴν δύναμιν, καὶ ὑποθετικὴν παρατιθεμένη, ἔλειται τὸ μή· ἔστι δὲ τοῦτο ἰδεῖν, ὅταν ἀριστήματα, καὶ εὐχάρις, καὶ ὑποθέσεις ἐκδηλοῖ. Οὐκ ἔστι δ' εὐρεῖν οὐδαμῶς παρὰ τῇ προστακτικῇ τὸ οὐ παρακείμενον. Τέλος δὲ παρὰ τῇ ἀπαρεμφάτῳ, καὶ μετοχῇ, κρατούντων τῶν καθόλου εἰρημένων, παράκειται οὐ ἐπὰν ὁ λόγος ἀναλυόμενος ὁριστικῇ, μὴ δὲ ἐπὰν ὑποτακτικῇ ἡ εὐκτικῇ μετατρέπηται.

* Τὸ περὶ τῶν ἀπλῶν μορίων λεγόμενον ἀληθεύει καὶ περὶ τῶν ἐκ τούτων συνθέτων.

A CHAPTER ON ACCENTS.

NATURE AND HISTORY OF GREEK ACCENTUATION.

Both accent and quantity have, and must have some play in all languages. So long as speech is dictated by thought and feeling, will men mark the more pregnant words and syllables with a superior tension of the voice. And so long as consonants remain solid, will it take longer time to get over two of them in pronunciation than over one; whereby is established for all languages the venerable but inaccurately expressed rule, that a short vowel becomes long before two consonants.

In English, the development of accent is powerful, that of quantity feeble — so feeble that the structure of our verse depends on accent alone. In Greek, both accent and quantity were powerfully developed, so that whereas, accent, the intellectual element, overbore quantity in prose, in verse on the other hand quantity, the musical element, overbore accent. The Modern Greek professor who reads Homer to his students according to the accents does not make heard any harmony of verse; and the English professor who declaims Demosthenes without giving effect to the accents, instead of rendering 'that other harmony of prose', produces a barbarous discord, Demosthenes himself being judge. For be it well noted that not accents themselves, but only accent-marks were introduced about B. C. 264, fifty-eight years after the death of Demosthenes; and that the introducer of them was the most distinguished grammarian and literary critic of his time, Aristophanes of Byzantium. The Greek language, which had penetrated along with the arms of Alexander into a multitude of foreign countries, was then holding the place of honour wherever under Alexander's successors, Greek rule continued; and myriads of foreigners were learning the language of their Greek masters, to all of whom Aristophanes, by his system of accent-marking, offered a much-needed help to correct pronunciation. On the dispersion of the educated Greeks after the fall of Constantinople in 1453, they taught their language in the capitals of Europe pronouncing it with the accents of Aristophanes, which they had

learned, not from books, but by the ear; and though the modern popular dialects of Greece deviate, as after the lapse of 2000 years they could not but deviate, more than did the ancient popular dialects from the accentuation registered by Aristophanes, yet so much of that accentuation still remains in the speech of the uneducated, as to demonstrate, even if the nature of the case had left room for doubt, that the ancient *tóνος* was the same kind of voice-tension which occurs in Modern Greek, and with which under the name *accent* we are familiar in English.

Accordingly, the English elocutionist, not less than Aristophanes, has to point out *enclitics* and *proclitics*, and in the very same sense. For most sentences contain, besides the magistral words pronounced with emphasis (*όρθότονοι*), others connecting or introducing these, the ministerial character of which is shown by unemphatic pronunciation; and such ministerial words are called *enclitic* when they follow, *proclitic* when they precede the magistral word to which they belong. Compare

<i>Ποῦ</i>	<i>ἐστιν</i>	<i>ὁ</i>	<i>ἄνηρ;</i>
(accented)	(enclitic)	(proclitic)	(accented)
<i>Where</i>	<i>is</i>	<i>the</i>	<i>man?</i>
(accented)	(enclitic)	(proclitic)	(accented).

Again, in English as in Greek, words written with the same letters are distinguished by accentuation, as

{ <i>πειθω</i> = I persuade	{ object, the verb.
{ <i>πειθώ</i> = persuasion	{ object, the noun
{ <i>φόρος</i> = bearing	{ minute, the adjective
{ <i>φορός</i> = burden	{ minute, the noun
{ <i>ως</i> = thus	{ <i>that</i> , demonstrative
{ <i>ὡς</i> = as, that	{ <i>that</i> , relative.

Even the rule that the accent in Greek is never farther back than the antepenult receives some illustration from English. Compare

{ <i>ἐγραφον</i>	{ temporal
{ <i>ἐγράφομεν</i>	{ temporalities.

The movement of the accent is here the same in both languages because in our case, as in that of the Greeks, it is difficult to the tongue and disagreeable to the ear to pronounce a long train of unaccented syllables.

The main point of difference between the accentuation of English and that of Greek is that whereas the former is independent of quantity, the latter is limited by it, the position and the movement of the accent in Greek being determined to a large extent by the quantity of the final syllable, as will be shown below. It is also true that distinctions of meaning by accent are much more numerous and important in Greek than in English. Jelf (§. 53) gives

fully two hundred of them ; but the following only are subjoined as being of common occurrence:

<i>ἄγων</i>	= leading	<i>ἀγών</i>	= contest
<i>ἀληθές</i>	= true	<i>ἀληθες</i>	= indeed!
<i>ἀμυγδαλῆ</i>	= almond-tree	<i>ἀμυγδάλη</i>	= almond
<i>βασίλεια</i>	= queen	<i>βασιλεία</i>	= kingdom
<i>βίος</i>	= life	<i>βιός</i>	= bow
<i>δῆμος</i>	= the people	<i>δημός</i>	= fat
<i>εἰμι</i>	= I go	<i>εἰμι</i>	= I am
<i>εἰς</i>	= thou art	<i>εἰς</i>	= into
<i>ἐστέ</i>	= ye are	<i>ἐστε</i>	= be ye
<i>ἐχθρά</i>	= hostility	<i>ἐχθρά</i>	= hostility
<i>η̄</i>	= surely	<i>η̄</i>	= or
<i>θέα</i>	= spectacle	<i>θεά</i>	= goddess
<i>θόλος</i>	= dome	<i>θολός</i>	= mud
<i>θυμός</i>	= mind	<i>θύμος</i>	= thyme
<i>ἰον</i>	= violet	<i>ἰόν</i>	= going
<i>ἵππων</i>	= of horses	<i>ἵππων</i>	= stable
<i>κάν</i>	= καὶ εν	<i>κάν</i>	= καὶ εάν
<i>κῆρ</i>	= heart	<i>κῆρ</i>	= fate
<i>μητρόκτονος</i>	= mother-slain	<i>μητρόκτόνος</i>	= mother-slaying
<i>μόνη</i>	= alone	<i>μονή</i>	= stay
<i>μυρίοι</i>	= ten thousand	<i>μυρίοι</i>	= thousands
<i>νόμος</i>	= law	<i>νομός</i>	= district
<i>ὅ</i>	= the	<i>ὅ</i>	= which
<i>οἶκοι</i>	= houses	<i>οἶκοι</i>	= at home
<i>σίγα</i>	= be silent	<i>σίγα</i>	= silently
<i>σχολῆ</i>	= leisure	<i>σχολῆ</i>	= at leisure
<i>ταῦτα</i>	= these things	<i>ταῦτα</i>	= the samethings
<i>τίνες</i>	= who ?	<i>τινές</i>	= some
<i>φῶς</i>	= light	<i>φῶς</i>	= man
<i>ώμος</i>	= shoulder	<i>ώμος</i>	= raw.

Other examples may be found under the heading 'Differences of meaning' in the English Index.

In laying down his rules, Aristophanes could not take much account of dialectic diversities of accentuation. The Lesbian Aeolic loved to throw the accent as far back as possible, like the modern English which is changing *prestige* into *prestige*, after the model of *vestige*, as it has already changed the old *advertise*, still heard in Scotland, into *advertise*. The Doric dialect again adhered more closely than any other to the ancient general rule which made the accent i. e. the emphasis of sound coincide with the emphasis of meaning. This rule so far pervades the system of Aristophanes, which was accommodated to the Attic standard, that accent may still be called the intellectual element in Greek pronunciation; for

the accent still marks for the most part, except where quantity forbids, either the radical syllable in which lies the radical meaning, or a formative syllable in which lies an important modification or application of that meaning. The intellectual character of accent is strongly marked in verbs and their cognates, as

γράφω = I write
ἔγραφον = I was writing
γράφη = the *act* or *result* of writing
γράφις = the *instrument* of writing
γράφευς = the *person* writing
γραφικός = *suited for writing*.

In compounds also, when quantity allows, the accent commonly passes to the modifying word, as

δόξα = expectation
παράδοξος = contrary to expectation.

The intellectual character of Greek accentuation farther appears in the very small number of neuter nouns accented on the final syllable, the inferior importance of the neuter gender being thereby signified. Also, in the strongly demonstrative final *-t* of the Attic dialect always attracting the accent to itself, as

{*οὗτος* = this *ἐκεῖνος* = that
οὗτος = this here *ἐκεῖνος* = that there.

And most beautifully in the distinction

μητρόκτονος = slain by a mother
μητροκτόνος = slaying a mother

the accent being in each word on the *active* element.

Two other examples are mentioned below, viz. the constant marking of *τις* interrogative throughout with the acute accent on the first syllable; and the anastrophe of many vocatives.

ACCENTUATION OF WORDS TAKEN SINGLY.

Whatever secondary accents may be in a word, there is always a primary one dominating these, beside which they sound weak. Aristophanes contented himself with marking only this primary accent, calling it *όξὺς τόνος* i. e. *acute accent* (ά), in opposition to the *βαρὺς τόνος* i. e. *grave accent* (ᾱ) which, though unwritten, he yet conceived as existing on all syllables not marked with the *όξὺς τόνος*. Hence the rule: *Each Greek word, taken singly, is marked with but one accent*; and it has been already stated that *this one accent is never placed farther back than the unpenult*.

The domination of the primary accent often issues in the absorption by the syllable that bears it of the syllable immediately following. This is the true reason of the final *e* in French words

like *père*, *mère* having become evanescent to muteness. The same tendency is illustrated in the derivation of many Italian words from the Latin, as *bontà* from *bonitatem*. Wherever this absorption happened in Greek, Aristophanes marked the syllable so obtained by uniting over it the accents of the two coalescent syllables, viz. the acute and the grave thus (ā), or in a waving line thus (ā), whence this form of accent was called *τόνος περισπώμενος* i. e. *circumflex accent*. That the written acute shall precede the understood grave accent in the original form of the word is ordinarily indispensable to the emergence of the circumflex accent: compare
 ἐφιλέστερ = ἐφιλεῖτον and ἐφιλέστην = ἐφιλεῖτην.

The only exception to this rule is in the final syllable of simple contract nouns and adjectives, as

Uncontracted	Contracted
κάνεον = a basket	κανοῦν
χρύσεος χρυσέα χρύσεον	χρυσοῦς χρυσᾶ χρυσοῦν
πορφύρεος πορφυρέα πορφύρεον πορφυρό-οῦς -ᾶ -οῦν.	

The only place where the combination of the acute and following grave does not result in the circumflex accent is in the nominative dual of 2^d declension contract nouns and adjectives: ὄστέω and χρυσέω are contracted into ὄστω and χρυσώ. Accordingly, wherever the circumflex accent occurs, a contraction in the above circumstances is either known or presumed, as

πλόντος (trisyllabic) = *πλούτος* *πράγμα* = *πρᾶγμα*.

When the contraction results in a diphthong, the circumflex accent is placed over the *latter* of the two vowels composing the diphthong. An obvious corollary here is that, since no accent is placed farther back than the antepenult, *the circumflex i. e. the combination of an acute with the following grave never can be farther back than the penult*.

In respect of accentuation then, words taken singly are called, those having

an acute on the last syllable	Oxytone,
an acute on the penult	Paroxytone,
an acute on the antepenult	Proparoxytone:
a circumflex on the last syllable	Perispomenon,
a circumflex on the penult	Properispomenon:
no written accent on the last syllable, therefore the understood grave accent on the last syllable	Barytone.

Now come the two grand rules for writing the acute and the circumflex, which accents alone appear in Greek words taken singly:

1. *The acute accent may be on any one, whether long or short, of the last three syllables, and is the only accent ever placed on the antepenult, but can be there only when the last syllable is short both by nature and by position.*

2. *The circumflex accent is placed only on syllables long by nature, is confined to the last two, and can be on the penult only when the last syllable is short by nature.*

Certain Ionic and Attic genitives, as *Ατρείδεω*, *πόλεως*, and compounds of *γέλως* and *κέρας*, as *φιλόγελως* and *ἄκερως*, are only apparent exceptions to these rules; for in the above genitives, *εω* was pronounced by synizesis in one syllable, and in the above compounds *ε* was by syncope dropped out of the pronunciation, so that these and the like words were really paroxytone.

That limitation of accent by quantity to which reference has already been made clearly appears in the above rules, which accordingly yield the following corollaries regarding quantity:

α. Circumflexed syllables are long by nature.

β. Proparoxytone words and properispomena have the final syllable short, the former both by nature and by position, as *μέλισσα*, the latter by nature at any rate, as *μοῦσα*, *ἔριβῶλαξ*.

γ. When in a paroxytone word the penult is long by nature, so also is the final syllable, as *ῷρα*.

In applying the above rules regarding the acute and circumflex accents, it must be kept in mind that, contrary to the earliest Greek usage and to the Doric, final *-αι* and *-οι*, diphthongs though they are, yet in Aristophanes' system of accentuation are treated as short, except in the 3^d pers. sing. of the Optative, and in the adverb *οἶκοι*. Hence the threefold distinction in verbs of which the future has three or more syllables and a long penult, as in *βούλεύω*, *βούλεύσω*.

βούλεύσαι, 3^d sing. 1 aor. Optative Active

βούλεῦσαι, 1 aorist Infinitive Active

βούλευσαι, 2^d sing. 1 aor. Imperative Middle.

To those who disregard the accents in pronouncing Greek the study of rules for accentuation must be repulsive and can yield only the minimum of profit; for from the nature of the case, the mind can be familiarised with the details of accentuation, and can apprehend truly even the nature of the thing so called only through the ear. But in learning to pronounce and write Greek with the accents, the following rules will be found of service.

Nouns. The accent of the nominative singular remains throughout, unless a change be required by one or other of the two grand rules given above, or by some one of the following special rules:

α. In the first declension, the genitive plural is *perispomenon*, -ων being contracted for -άων, -έων, except in ἀφύη = *anchovy*, χλούνης = *wild-boar*, χρήστης = *usurer*, which keep the accent on the penult to distinguish their genitives plural from those of the adjectives ἀφνής, χλονός, χρηστός.

β. In the first and second declensions, all genitives and datives from *oxytone* nominatives are *perispomena*, as

from Nom. Sing. ποιητης

Sing.	Dual	Plur.
Gen. ποιητοῦ	ποιηταῖν	ποιητῶν
Dat. ποιητῇ	ποιηταῖν	ποιηταῖς
	from Nom. Sing. ἀγρός	
Sing.	Dual	Plur.
Gen. ἀγροῦ	ἀγροῖν	ἀγρῶν
Dat. ἀγρῷ	ἀγροῖν	ἀγροῖς.

The only exception to this rule is in the genitive singular of the Attic second declension, which remains *oxytone*, as, from Nom. νεώς, Gen. νεώ, but Dat. νεῷ according to the rule.

γ. In the third declension, almost all genitives and datives from monosyllabic nominatives are accented on the last syllable, the form of the accent being acute or circumflex according as the last syllable is short or long, as

from Nom. Sing. πούς

Sing.	Dual	Plur.
Gen. ποδός	ποδοῖν	ποδῶν.
Dat. ποδὶ	ποδοῖν	ποσίν
	from Nom. Sing. Θρᾷξ	
Sing.	Dual	Plur.
Gen. Θρᾳκός	Θρᾳκοῖν	Θρᾳκῶν
Dat. Θρᾳκὶ	Θρᾳκοῖν	Θρᾳξίν.

Θρᾳξ is one of a very few contracts which observe this rule; for monosyllabic contract nominatives being originally dissyllabic do not properly come under it. Hence the distinction between κῆρ = 'fate' and κῆρ (κέαρ) = 'heart' is continued in the oblique cases thus:

Nom. κῆρ	κῆρ
Gen. κηρός	κῆρος
Dat. κηρὶ	κῆρι
Acc. κηρα	κῆρ.

Moreover, this rule is observed only in the singular number by the following nouns:

δάξ, = torch	οὖς = ear	Τρώς = a Trojan
δμως = slave	παῖς = child	φώς = blister
θώς = jackal	σῆς = moth	φῶς = light.

After the model of these nine monosyllabic nouns, are accented the syncopated genitives and datives singular of πατήρ, μήτηρ, θυγά-

τῆρ, γαστῆρ, and all the syncopated genitives and datives of ἀνήρ, excepting the dative plural, which case in all these syncopated nouns is paroxytone, ending in -άσι.

For the accentuation of the nominative case of nouns, the following rules are given:

FIRST DECLENSION.

Perispomena, are all contracts, as Ἐρμῆς, μνᾶ.

Oxytone, are most verbals in -της, as ποιητής.

Paroxytone, are

all in -συνη,	as δικαιοσύνη,
all diminutives in -ισκη,	„ παιδίσκη,
all in -ας,	„ ταμίας,
all patronymics in -δης,	„ Πηλείδης,
all feminine patronymics in -ινη,	„ Νηρίνη,
„ „ „ -ωνη,	„ Ακρισιώνη,
all in -ειά derived from verbs,	„ βασιλεία,
most abstracts in -ιά,	„ σοφία.

Accented as far back as possible, are all in -ά, as μέλισσά, μούσα, including of course those in -ειά, whether derived from nouns, as βασίλεια = queen, or from adjectives, as ἀλήθεια = truth.

SECOND DECLENSION.

Oxytone, are

all verbals in -μος,	as λογισμός,
most others in -μος with long penult,	„ βωμός.

Paroxytone, are

all diminutives in -ισκος,	„ νεανισκός,
all diminutives in -ιον preceded immediately by the stem,	„ παιδίον.

Accented as far back as possible, are most neuters, particularly

all neuters in -τηρων,	as χρηστήρων,
all diminutives in -εριον,	„ παιδάριον,
„ „ „ -ιδων,	„ οίκιδιον,
„ „ „ -υδριον,	„ μελύδριον,
„ „ „ -υλλιον,	„ είδυλλιον.

THIRD DECLENSION.

Perispomena, are

all monosyllabic neuters,	as πῦρ,
most monosyllabics having acc. in -ν,	„ βοῦς.

Oxytone, are

all nouns in -ας gen. -αδος,	as λαμπάς,
„ „ „ -αν,	„ παιάν,

all nouns in -ενς,
 „ „ „ -εων,
 „ masculine nouns in -ηρ,
 „ female patronymics in -ις,
 „ nouns in -ῆς gen. ιδος,
 „ „ „ -ῆς,
 „ „ „ -ω,
 „ local collectives in -ων,
 most others in -ων,
 all nouns in -ως gen. οος,
 most monosyllabics having acc. in -α,

as βασιλεύς,
 „ κυρεών,
 „ κρατήρ,
 „ Αἰλαντίς,
 „ αρραγίς,
 „ ιχθύς,
 „ ηχώ,
 „ γυναικών,
 „ χελιδών,
 „ ηώς.
 „ πούς.

Accented as far back as possible, are

all nouns in -ις gen. -εως,
 „ „ „ -ης gen. -εως,
 „ „ „ ξ,
 „ verbals in -τωρ,
 „ nouns in -ψ,
 „ neuter nouns,

as πόλις,
 „ πέλεκυς,
 „ κόραξ,
 „ δήτωρ,
 „ λαῖλαψ,
 „ τεῖχος.

Because, in calling out a person's name to attract his attention, the voice naturally begins with emphasis, the accent of the Vocative case is often thrown as far back as possible, as

Nom. Ἀγαμέμνων, ἀνήρ, Ἀπόλλων, γυνή, δαήρ, δεσπότης.
 Voc. Αγαμεμνον, ἀνερ, Ἀπολλον, γυναι, δαερ, δέσποτα.
 Nom. Δημήτηρ, θυγάτηρ, Ποσειδῶν, Σωκράτης, σωτήρ.
 Voc. Δημητερ, θύγατερ, Πόσειδον, Σώκρατες, σῶτερ.

The noun *γυνή* is deemed the most irregular in point of accentuation; yet, on this view of the Vocative case, and on the supposition of a Nominative form *γυναιξ*, the irregularity is reduced to that of syncopated nouns, like *πατήρ*, all the genitives and datives being accented on the last syllable, thus

Singular	Dual	Plural
Nom. <i>γυνή</i>	<i>γυναικε</i>	<i>γυναικες</i>
Gen. <i>γυναικός</i>	<i>γυναικοὶν</i>	<i>γυναικῶν</i>
Dat. <i>γυναικὶ</i>	<i>γυναικοὶν</i>	<i>γυναικεὶ</i>
Acc. <i>γυναικα</i>	<i>γυναικε</i>	<i>γυναικας</i>
Voc. <i>γύναι</i>	<i>γυναικε</i>	<i>γυναικες</i> .

Adjectives. The accentuation of adjectives is the same as that of the nouns on the model of which they in their several genders are declined, except in the genitive plural feminine of adjectives in -ος -η or -α -ων, which gen. plur. fem., instead of being peripomenon according to the rule for genitives plural of the first declension, takes, when written with the same letters as the masculine and neuter, the same accentuation also, as

Nom. Sing. ἄγιος ἄγια ἄγιον
 Gen. Plur. ἄγιων ἄγιων ἄγιων.

The first three cardinal numerals, like monosyllabic nouns of the third declension, accent their genitives and datives on the last syllable: even the feminine of *εἷς* does so, and the compounds of *εἷς* through all genders in the singular, thus

Nom.	οὐδεῖς	οὐδεμία	οὐδέν
Gen.	οὐδενός	οὐδεμιᾶς	οὐδενός
Dat.	οὐδενί	οὐδεμιᾶ	οὐδενί
Acc.	οὐδένα	οὐδεμιᾶν	οὐδέν.

For the accentuation of the Nominative case of adjectives, the following rules are given:

Oxytone, are

all verbs in -ικος,	as ἀρχικός,
“ “ “ -τος,	“ δυνατός,
“ ordinals, -στος,	“ εἰκοστός,
most adjectives in -λος,	“ φιλός,
“ “ “ -νος,	“ σεμνός,
“ “ “ -ρος,	“ αἰσχρός,
all “ “ “ -υς,	“ ηδύς.

Notable exceptions in -νος are adjectives denoting material, as *ξύλινος*, and country, as *Ταραντίνος*.

Paroxytone, are

all multiples in -πλοος,	as διπλός,
all verbs in -τεος,	“ ἀσκητέος.

Properispomenon, are

most in -αιος from nouns of Decl. I, as ἀγοραῖος,
all numerals in -αιος, “ τριταῖος,
most adjectives in -ωος, “ ἔως.

Accented as far back as possible, are

most adjectives in -ειος, as θήρειος,
“ in -εος affixed immediately
to the root, “ χρύσεος
most in -ιος preceded by a consonant, “ οὐράνιος,
all in -μος, “ χρήσιμος,
all ordinals, not in -στος, “ δέκατος,
all comparatives, “ ήδιων,
all superlatives, “ ήδιστος.

Because comparatives throw the accent as far back as possible, the neuter of *ήδιων* is written *ήδιον*. The same change of accent takes place in the neuter of most paroxytone compounds in -ης and -ων, except those in -φρων, -ωδης, -ωλης, -ηρης, -ωρης. Hence

Nom. Sing. εὐδαιμων εὐδαιμων εὐδαιμον
“ “ αὐθάδης αὐθάδης αὐθαδες.

Participles. The movement of the accent in participles is the same as in adjectives excepting that the accentuation of the neuter

is always on the same syllable as in the masculine, so that the future participle active of *ποιέω* is written

ποιήσων ποιήσοντα ποιήσον.

Moreover, monosyllabic participles of the 3^d declension form, as *θεῖς*, *δούς*, do not follow the analogy of monosyllabic nouns of the third declension: they do not accent their genitives and datives on the final syllable, but on the syllable which is accented in the nominative.

In the nominative case, participles are accented as far back as possible, with the following exceptions:

Perispomenon, is the future active of liquid verbs, as

σπερῶν (*σπεροῦσα*) *σπεροῦν.*

Oxytone, are

2 aor. act. in *-ων*, as *ἔλθων*,

participles of the 3^d declension in *-ς*, „ *τιθεῖς*,

(except the 1. aor. act. which is paroxytone).

Paroxytone, is the perfect passive, as *τετυμμένος*.

The irregular verbs furnish a few more exceptions: e. g. the present participle of *εἰμι*, is oxytone, *ἰόν*.

Pronouns. Oxytone forms of the first and second declensions, including the article, of which the original nominative was *ΤΟΣ*, become, like oxytone nouns of the first and second declensions, perispomena in the genitive and dative of all numbers. *Πᾶς* follows the analogy of monosyllabic nouns of the third declension only in the singular number, making there *παντός*, *παντί*, but in the dual *πάντοιν*, and in the plural *πάντων πᾶσι*.

Τις interrogative is distinguished from *τις* indefinite by having the acute accent on its first syllable throughout.

Verbs. Generally, the accent is thrown as far back as possible. In compounds however, the accent is seldom thrown farther back than the accented syllable of the first element, and in the case of augmented syllables it is never thrown back at all. Thus, even though in *παρειμι*, and the like compounds of both *εἰμι* and *εἰμι*, the accent is thrown back beyond the accented syllable of *παρά*, yet in the imperfect of the compound the accent remains on the augmented syllable, *παρῆν*.

Besides the participles already mentioned, the following are exceptions to the general rule for the accentuation of verbs:

Perispomena, are

2 aor. Infin. act., as *λαβεῖν*,

2 aor. Imperat. mid., „ *λαβοῦ*,

fut. Indic. act. of liquid verbs, „ *σπερῶ*,

fut. Infin. act. of liquid verbs, „ *σπερεῖν*,

1 aor. pass. Subj. Group, „ *τυφθῶ*,

2 aor. pass. Subj. Group, „ *τυπῶ*,

present act. of verbs in *-μι*, Subj. Group, as *διδῶ*,
2 aor. act. of verbs in *-μι*, Subj. Group, „, *δῶ*.

Properispomena, are

fut. Opt. act. of liquid verbs,	as <i>σπεροῖμι</i> ,
fut. Indic. mid. of liquid verbs,	„, <i>σπεροῦμαι</i> ,
present mid. and pass. of verbs in <i>-μι</i> ,	
Subj. Group,	„, <i>διδῶμαι</i> ,
2 aor. mid. of verbs in <i>-μι</i> , Subj. Group, „, <i>δῶμαι</i> ,	
1 aor. Inf. act. with a naturally long vowel	
in the penult,	„, <i>τιμῆσαι</i> ,
all Inf. in <i>-ναι</i> with a naturally long vowel in the penult,	„, <i>τυφθῆναι</i> ,
Perf. Inf. pass. with a naturally long vowel in the penult,	„, <i>τετιμῆσθαι</i> .

Oxytone, are these five aorists imperative, *εἰπέ*, *έλθέ*, *εῦρέ*, *ἰδέ*, *λαβέ*.

Paroxytone, are 2 aor. Inf. middle, as *λιπέσθαι*,

1 aor. Inf. act. with a naturally short vowel in the penult,	„, <i>φυλάξαι</i> ,
all Inf. in <i>-ναι</i> with a naturally short vowel in the penult,	„, <i>διδόναι</i> ,
Perf. Inf. pass. with a naturally short vowel in the penult,	„, <i>τετύφθαι</i> .

The peculiarities of accentuation in pure verbs contracted are explained by the contraction in each case.

Adverbs. Adverbs in *-ως* derived from adjectives are accented like the genitive plural of the adjective from which they are derived, as *σοφῶς*, *ταχέως*.

Oxytone, are

adverbs in <i>-δα</i> , as <i>ἀναφανδά</i>	= openly,
„ „ <i>-δον</i> , „, <i>βοτρυδόν</i>	= in clusters,
„ „ <i>-ει</i> , „, <i>ἀμαχεῖ</i>	= without fighting,
„ „ <i>-ι</i> , „, <i>Ἐλληνιστί</i>	= in Greek,
„ „ <i>-ξ</i> , „, <i>παραλλάξ</i>	= alternately.

Paroxytone, are

adverbs in <i>-ακις</i> , as <i>πολλάκις</i>	= often,
„ „ <i>-δην</i> , „, <i>σποράδην</i>	= here and there,
„ „ <i>-ω</i> , „, <i>ἔξω</i>	= outside.

Prepositions. All dissyllabic prepositions are oxytone: so are the monosyllabic; but *ἐις*, *ἐν*, *ἐξ*, when proclitic (see below) are unaccented.

ACCENTUATION OF WORDS CONNECTED IN DISCOURSE.

The grave accent, which is not written at all on words taken singly, is written in connected discourse, instead of the acute, on all oxytones except those which end a sentence, as

ὅρῶ τὸν νεανίαν διώκοντα τὰ αἰσχρά —
I see the youth pursuing what is base,

and those which are immediately followed by an enclitic, as will be shown below.

The only exception to this usage is *τις* interrogative, which keeps its acute accent in all circumstances.

Proclitics. The Greek proclitics, of which the nature has been already explained, are:

the aspirated forms of the article, ὁ, ἡ, οἱ, αἱ,	
the negative adverbs	οὐ, οὐχ, οὐχ,
the conjunctions	εἰ, ὡς,
the prepositions	εἰς, ἐν, ἐξ.

The proclitics are by some called *atomics*, but not accurately; for such of them as are found following the words they belong to, being in that position no longer proclitic, do then take an accent: witness the phrases πῶς γὰρ οὐ, θεὸς ὡς, κακῶν ἔξ.

Enclitics. The Greek enclitics, of which the nature has been already explained, are

Pronouns: the monosyllabic singular oblique cases of the three personal pronouns, to which may be added *μήν*, *νίν*, *σφέ*, and the plural *σφίσι*. also *τις* indefinite in all its cases.

Verbs: the pres. Indic. of *εἰμί* and *φημί*, except the 2^d pers. sing.

Adverbs: the indefinites *πώς*, *πώ*, *πή*, *ποί*, *πού*, *ποθί*, *πο-*
θέν, *ποτέ*.

Particles: *γέ*, *νύν*, *πέρ*, *τέ*, *τοί*. the poetic *θήν*, *κέ(ν)*, *νύ*,
δά, and the inseparable *-δε* implying *direction towards*.

The management of enclitics is comprised in the following rules:

1. All enclitics simply lose their accent after oxytones and perispomena, as *θήρ τις*, *ποταμοί τινες*. *φῶς τι*, *φῶς ἔστιν*. And this rule holds even when the enclitic is written in one word with its principal, which accounts for the otherwise impossible accentuation of *ῶντινων*, gen. plur. of *ῶστις*.

2. Monosyllabic enclitics simply lose their accent after paroxytones, as *φίλος μον*.

3. All enclitics transfer their own accent to the final syllable of proparoxytones and properispomena immediately preceding them, as *ἄνθρωπός τις*, *ἄνθρωποί τινες*. *σῶμά τι*, *σῶμά ἔστιν*. Except however properispomena in *-ξ* and *-ψ*.

4. All enclitics keep their own accent after properispomena ending in *-ξ* and *-ψ*, as do also dissyllabic enclitics after paroxytones, as *αὐλαξ μοῦ*, *αὐλαξ ἔστιν*. *φίλος ἔστιν*.

The inseparable *δέ* is subject to the same rules as the enclitics written separately, as *οὐρανόνδε*, *Ἄθηναξε*, *οἰκόνδε*, except when

affixed to pronouns and adverbs, in which event the syllable preceding it takes the accent, as *τοσόσδε*, *τοσοῦδε*, from *τόσος*.

When a number of enclitics succeed each other, they are divided into what may be called accent-words, each enclitic throwing its own accent back on the preceding enclitic, or losing it altogether, or keeping it, according to the rules just given, as

καλός πως τις μοι ἔστιν,

where *πως* and *τις* simply lose their own accents, *μοι* throws its accent back on *τις*, and *ἔστιν* keeps its accent.

Enclitics keep their accent when an elision immediately precedes, as *πολλοὶ δ' εἰσίν*. So also they do, when their position is not that of enclitics, i. e. when, instead of following, they precede the word they belong to, as *τι ἔργον* = *some deed*; and likewise when their meaning is not that of enclitics, i. e. not feeble but emphatic, as when *οὐ* *οἶ* are reflexive, and in *ἔμε καὶ σέ*. More particularly, the pronouns *σοῦ*, *σοί*, *σέ*, *οἶ*, *σφίσι* retain their accent after an accented prepositions, as *παρὰ σοῦ*, but *ἐκ σού*. After accented prepositions, the longer forms of the 1st personal pronoun are alone to be used: *παρ' ἔμοι* (not *παρά μοι*), but yet *περί μοι*, *πρός με* are found.

Anastrophe. The *anastrophe* i. e. throwing back of the accent in many vocatives has been already pointed out. Here follow other examples of anastrophe.

The third person singular of *εἰμί*, when not really enclitic, i. e. when, instead of being the mere copula, it denotes existence in opposition to non-existence; when it begins a sentence, or all but begins a sentence by following any one of these eleven words, *ἄλλ'*, *εἰ'*, *καὶ'*, *μέν'*, *μή'*, *οὐτι'*, *οὐν'*, *τι δ'*, *τοῦτ'*, *ώς*, — in these cases, the third person singular of *εἰμί* becomes paroxytone, as *θεὸς ἔστιν τι δ' ἔστιν*;

Dissyllabic prepositions, all naturally oxytone, become in like manner paroxytone when they cease to deserve the name *preposition*, i. e. when they stand after their case, as *δόμων ὑπερ*, or are used adverbially, as *όλεσας ἄπο* for *ἀπολεσας*, or represent a compound verb, as *πάρα* for *πάρεστι*, *ἄνα* for *ἀνάστηθι*. The prepositions *ἄνα* and *διά* do not suffer anastrophe, because anastrophe would confound them with *ἄνα* voc. of *ἄναξ*, and *Δία* acc. of *Ζεύς*.

Oxytones become paroxytone when their final syllable is elided, as

δεῖν' ἔπη for *δεινὰ ἔπη*,

πόλλ' *ἔπαθον* for *πολλὰ ἔπαθον*,

except prepositions, the words *ἄλλα*, *μηδέ*, *οὐδέ*, and the poetic *γέδε*, *ἰδέ*.

Lastly, *ἔγώ*, *ἔμοι*, *ἔμε* suffer anastrophe, when the enclitic *γέ* is affixed, becoming *ἔγωγε*, *ἔμοιγε*, *ἔμεγε*.

A phenomenon, the very opposite of anastrophe occurs when the inseparable enclitic $-δ\varepsilon$, which must not be confounded with $δ\varepsilon$ the correspondent of $μέν$ in $οὐδέ$, $μηδέ$, is affixed to pronouns and adverbs; the accent of the pronoun and adverb being then *thrown forward* to the penult, as

from $τόσος$ $τοσόσδε$
,, $τόσον$ $τοσοῦδε$
,, $ἐνθα$ $ἐνθάδε.$

Affixed to other parts of speech, $-δ\varepsilon$ follows the general rules for enclitics, as

$Ὀλυμπόνδε$ = to Olympus, $Ἐλευσίνάδε$ = to Eleusis.

ENGLISH INDEX.*

A or **An**, represented by $\delta\eta\tau\delta$, 9. 1. b, by $\tau\eta\varsigma$ indefinite 28. 1: in distributive sense, by $\kappa\alpha\tau\alpha$ with or without $\xi\kappa\alpha\sigma\tau\alpha\varsigma$, 28. 1.
